
Contents

1	Introduction	1
1.1	Mechanics	1
1.2	Biomechanics	2
1.3	Basic Concepts	3
1.4	Newton's Laws	3
1.5	Dimensional Analysis	3
1.6	Systems of Units	4
1.7	Conversion of Units	5
1.8	Mathematics	5
1.9	Scalars and Vectors	6
1.10	Modeling and Approximations	6
1.11	Generalized Procedure	6
1.12	Scope of the Text	6
1.13	Notation	7
	Suggested Reading	7
2	Force Vector	9
2.1	Definition of Force	9
2.2	Properties of Force as a Vector Quantity	9
2.3	Dimension and Units of Force	10
2.4	Force Systems	10
2.5	External and Internal Forces	10
2.6	Normal and Tangential Forces	10
2.7	Tensile and Compressive Forces	11
2.8	Coplanar Forces	11
2.9	Collinear Forces	11
2.10	Concurrent Forces	11
2.11	Parallel Force	11
2.12	Gravitational Force or Weight	11
2.13	Distributed Force Systems and Pressure	12
2.14	Frictional Forces	13
2.15	Exercise Problems	15
3	Moment and Torque Vectors	19
3.1	Definitions of Moment and Torque Vectors	19
3.2	Magnitude of Moment	19
3.3	Direction of Moment	20
3.4	Dimension and Units of Moment	20

3.5	Some Fine Points About the Moment Vector	21
3.6	The Net or Resultant Moment	22
3.7	The Couple and Couple-Moment	26
3.8	Translation of Forces	26
3.9	Moment as a Vector Product	27
3.10	Exercise Problems	30
4	Statics: Systems in Equilibrium	35
4.1	Overview	35
4.2	Newton's Laws of Mechanics.	35
4.3	Conditions for Equilibrium.	36
4.4	Free-Body Diagrams	38
4.5	Procedure to Analyze Systems in Equilibrium	38
4.6	Notes Concerning the Equilibrium Equations	39
4.7	Constraints and Reactions	40
4.8	Simply Supported Structures	40
4.9	Cable-Pulley Systems and Traction Devices.	45
4.10	Built-in Structures	47
4.11	Systems Involving Friction.	51
4.12	Center of Gravity Determination	52
4.13	Exercise Problems	56
5	Applications of Statics to Biomechanics	61
5.1	Skeletal Joints	61
5.2	Skeletal Muscles	62
5.3	Basic Considerations	62
5.4	Basic Assumptions and Limitations	62
5.5	Mechanics of the Elbow.	63
5.6	Mechanics of the Shoulder.	67
5.7	Mechanics of the Spinal Column	70
5.8	Mechanics of the Hip.	74
5.9	Mechanics of the Knee.	80
5.10	Mechanics of the Ankle	84
6	Introduction to Dynamics	87
6.1	Dynamics.	87
6.2	Kinematics and Kinetics.	87
6.3	Linear, Angular, and General Motions	87
6.4	Distance and Displacement	88
6.5	Speed and Velocity	89
6.6	Acceleration.	89
6.7	Inertia and Momentum.	89
6.8	Degree of Freedom	89
6.9	Particle Concept.	89
6.10	Reference Frames and Coordinate Systems	89
6.11	Prerequisites for Dynamic Analysis	90
6.12	Topics to Be Covered.	90
7	Linear Kinematics	91
7.1	Uniaxial Motion.	91
7.2	Position, Displacement, Velocity, and Acceleration	91
7.3	Dimensions and Units	92
7.4	Measured and Derived Quantities.	93

7.5	Uniaxial Motion with Constant Acceleration	93
7.6	Examples of Uniaxial Motion.	94
7.7	Biaxial Motion.	99
7.8	Position, Velocity, and Acceleration Vectors	99
7.9	Biaxial Motion with Constant Acceleration	101
7.10	Projectile Motion	101
7.11	Applications to Athletics	104
7.12	Exercise Problems	107
8	Linear Kinetics.	109
8.1	Overview	109
8.2	Equations of Motion.	109
8.3	Special Cases of Translational Motion	110
8.3.1	Force is Constant	110
8.3.2	Force Is a Function of Time	111
8.3.3	Force Is a Function of Displacement	111
8.4	Procedure for Problem Solving in Kinetics.	111
8.5	Work and Energy Methods.	113
8.6	Mechanical Work.	113
8.6.1	Work Done by a Constant Force	113
8.6.2	Work Done by a Varying Force.	114
8.6.3	Work as a Scalar Product	114
8.7	Mechanical Energy	115
8.7.1	Potential Energy	115
8.7.2	Kinetic Energy	115
8.8	Work–Energy Theorem	115
8.9	Conservation of Energy Principle.	115
8.10	Dimension and Units of Work and Energy	115
8.11	Power	116
8.12	Applications of Energy Methods	116
8.13	Exercise Problems	119
9	Angular Kinematics	121
9.1	Polar Coordinates.	121
9.2	Angular Position and Displacement	121
9.3	Angular Velocity	122
9.4	Angular Acceleration	122
9.5	Dimensions and Units	123
9.6	Definitions of Basic Concepts	123
9.7	Rotational Motion About a Fixed Axis.	129
9.8	Relationships Between Linear and Angular Quantities	130
9.9	Uniform Circular Motion	131
9.10	Rotational Motion with Constant Acceleration	131
9.11	Relative Motion	131
9.12	Linkage Systems	133
9.13	Exercise Problems	136
10	Angular Kinetics	139
10.1	Kinetics of Angular Motion	139
10.2	Torque and Angular Acceleration.	143
10.3	Mass Moment of Inertia.	144
10.4	Parallel-Axis Theorem	144
10.5	Radius of Gyration.	145

10.6	Segmental Motion Analysis	145
10.7	Rotational Kinetic Energy	148
10.8	Angular Work and Power	149
11	Impulse and Momentum	151
11.1	Introduction	151
11.2	Linear Momentum and Impulse	151
11.3	Applications of the Impulse–Momentum Method	153
11.4	Conservation of Linear Momentum	156
11.5	Impact and Collisions	157
11.6	One-Dimensional Collisions	158
	11.6.1 Perfectly Inelastic Collision	158
	11.6.2 Perfectly Elastic Collision	158
	11.6.3 Elasto-Plastic Collision	159
11.7	Two-Dimensional Collisions	160
11.8	Angular Impulse and Momentum	163
11.9	Summary of Basic Equations	163
11.10	Kinetics of Rigid Bodies in Plane Motion	163
12	Introduction to Deformable Body Mechanics	165
12.1	Overview	165
12.2	Applied Forces and Deformations	165
12.3	Internal Forces and Moments	165
12.4	Stress and Strain	166
12.5	General Procedure	167
12.6	Mathematics Involved	168
12.7	Topics to Be Covered	168
12.8	Suggested Reading	168
13	Stress and Strain	169
13.1	Basic Loading Configurations	169
13.2	Uniaxial Tension Test	169
13.3	Load-Elongation Diagrams	170
13.4	Simple Stress	171
13.5	Simple Strain	172
13.6	Stress–Strain Diagrams	173
13.7	Elastic Deformations	174
13.8	Hooke’s Law	175
13.9	Plastic Deformations	176
13.10	Necking	176
13.11	Work and Strain Energy	177
13.12	Strain Hardening	177
13.13	Hysteresis Loop	177
13.14	Properties Based on Stress–Strain Diagrams	178
13.15	Idealized Models of Material Behavior	178
13.16	Mechanical Properties of Materials	179
13.17	Example Problems	179
13.18	Exercise Problems	185
14	Multiaxial Deformations and Stress Analyses	189
14.1	Poisson’s Ratio	189
14.2	Biaxial and Triaxial Stresses	190
14.3	Stress Transformation	193

14.4	Principal Stresses	194
14.5	Mohr's Circle	195
14.6	Failure Theories	198
14.7	Allowable Stress and Factor of Safety	199
14.8	Factors Affecting the Strength of Materials	199
14.9	Fatigue and Endurance	200
14.10	Stress Concentration	201
14.11	Torsion	202
14.12	Bending	207
14.13	Combined Loading	215
14.14	Exercise Problems	217
15	Mechanical Properties of Biological Tissues	221
15.1	Viscoelasticity	221
15.2	Analogies Based on Springs and Dashpots	222
15.3	Empirical Models of Viscoelasticity	223
15.3.1	Kelvin–Voight Model	223
15.3.2	Maxwell Model	224
15.3.3	Standard Solid Model	224
15.4	Time-Dependent Material Response	225
15.5	Comparison of Elasticity and Viscoelasticity	225
15.6	Common Characteristics of Biological Tissues	228
15.7	Biomechanics of Bone	228
15.7.1	Composition of Bone	229
15.7.2	Mechanical Properties of Bone	229
15.7.3	Structural Integrity of Bone	231
15.7.4	Bone Fractures	231
15.8	Tendons and Ligaments	232
15.9	Skeletal Muscles	233
15.10	Articular Cartilage	234
15.11	Discussion	235
15.12	Exercise Problem	235
	Appendix A: Plane Geometry	237
	Appendix B: Vector Algebra	241
	Appendix C: Calculus	255
	Index	269
