Preface	xi
About the Author	xv
Notations	xvii
1 The Computational Engineering Sciences: an introduction	1
1.1 Engineering Simulation	1
1.2 A Problem-Solving Environment	3
1.3 Weak Formulation Essence	4
1.4 Decisions on Forming WS^N	6
1.5 Discrete WS^h Implementations	8
1.6 Chapter Summary	10
References	11
2 Problem Statements: in the engineering sciences	13
2.1 Engineering Simulation	13
2.2 Continuum Mechanics Viewpoint	14
2.3 Continuum Conservation Principle Forms	14
2.4 Constitutive Closure for Conservation Principle PDEs	16
2.5 Engineering Science Continuum Mechanics	20
References	21
3 Some Introductory Material: PDEs, BCs, solutions, discrete concepts	23
3.1 Example Linear Heat Conduction Solutions	23
3.2 Multidimensional PDEs, Separation of Variables	24
3.3 Mathematical Foundation Essence for GWS^N	28
3.4 A Legacy FD Construction	29
3.5 An FD Approximate Solution	31
3.6 Lagrange Interpolation Polynomials	32

3.7	Chapter Summary	33
	Exercises	34
	References	34
4	Heat Conduction: an FE weak statement tutorial	35
4.1	A Steady Heat Conduction Example	35
4.2	Weak Form Approximation, Error Extremization	36
4.3	GWS ^N Discrete Implementation, FE Trial Space Basis	38
4.4	Finite Element Matrix Statements	40
4.5	Assembly of $\{WS\}_e$ to form Algebraic GWS ^h	42
4.6	Solution Accuracy, Error Distribution	44
4.7	Convergence, Boundary Heat Flux	45
4.8	Chapter Summary	46
	Exercises	46
	Reference	46
5	Steady Heat Transfer, $n = 1$: GWS^h implemented with $\{N_k(\zeta_\alpha)\}$, $1 \leq k \leq 3$, accuracy, convergence, nonlinearity, templates	47
5.1	Introduction	47
5.2	Steady Heat Transfer, $n = 1$	48
5.3	FE $k = 1$ Trial Space Basis Matrix Library	50
5.4	Object-Oriented GWS ^h Programming	53
5.5	Higher Completeness Degree Trial Space Bases	56
5.6	Global Theory, Asymptotic Error Estimate	59
5.7	Nonsmooth Data, Theory Generalization	63
5.8	Temperature-Dependent Conductivity, Nonlinearity	65
5.9	Static Condensation, p -Elements	68
5.10	Chapter Summary	70
	Exercises	72
	Computer Labs	72
	References	73
6	Engineering Sciences, $n = 1$: GWS^h $\{N_k(\zeta_\alpha)\}$ implementations in the computational engineering sciences	75
6.1	Introduction	75
6.2	The Euler–Bernoulli Beam Equation	76
6.3	Euler–Bernoulli Beam Theory GWS ^h Reformulation	81
6.4	Timoshenko Beam Theory	87
6.5	Mechanical Vibrations of a Beam	92
6.6	Fluid Mechanics, Potential Flow	100
6.7	Electromagnetic Plane Wave Propagation	104
6.8	Convection–Radiation Finned Cylinder Heat Transfer	105
6.9	Chapter Summary	113

Exercises	115
Computer Labs	115
References	116
7 Steady Heat Transfer, $n > 1$: $n = 2, 3$ GWS^h for D E + BCs, FE bases, convergence, error mechanisms	117
7.1 Introduction	117
7.2 Multidimensional FE Bases and DOF	118
7.3 Multidimensional FE Operations for $\{N_k(\zeta_\alpha)\}$	121
7.4 The NC $k = 1, 2$ Basis FE Matrix Library	124
7.5 NC Basis $\{WS\}_e$ Template, Accuracy, Convergence	127
7.6 The Tensor Product Basis Element Family	130
7.7 Gauss Numerical Quadrature, $k = 1$ TP Basis Library	132
7.8 Convection–Radiation BC GWS ^h Implementation	136
7.9 Linear Basis GWS ^h Template Unification	140
7.10 Accuracy, Convergence Revisited	141
7.11 Chapter Summary	143
Exercises	144
Computer Labs	145
References	145
8 Finite Differences of Opinion: FE GWS^h connections to FD, FV methods	147
8.1 The FD–FE Correlation	147
8.2 The FV–FE Correlation	150
8.3 Chapter Summary	154
Exercises	155
9 Convection–Diffusion, $n = 1$: unsteady energy transport, accuracy/convergence, dispersion error, numerical diffusion	157
9.1 Introduction	157
9.2 The Galerkin Weak Statement	158
9.3 GWS ^h Completion for Time Dependence	160
9.4 GWS ^h + θ TS Algorithm Templates	161
9.5 GWS ^h + θ TS Algorithm Asymptotic Error Estimates	163
9.6 Performance Verification Test Cases	164
9.7 Dispersive Error Characterization	167
9.8 A Modified Galerkin Weak Statement	171
9.9 Verification Problem Statements Revisited	174
9.10 Unsteady Heat Conduction	177
9.11 Chapter Summary	179
Exercises	180
Computer Labs	180
References	181

10 Convection – Diffusion, $n > 1$: $n = 2, 3$ $GWS^h/mGWS^h + \theta TS$, stability, error characterization, linear algebra	183
10.1 The Problem Statement	183
10.2 $GWS^h + \theta TS$ Formulation Reprise	185
10.3 Matrix Library Additions, Templates	186
10.4 $mPDE$ Galerkin Weak Forms, Theoretical Analyses	188
10.5 Verification, Benchmarking, and Validation	192
10.6 Mass Transport, the Rotating Cone Verification	193
10.7 The Gaussian Plume Benchmark	196
10.8 Steady n -D Peclet Problem Verification	197
10.9 Mass Transport, a Validated $n = 3$ Experiment	200
10.10 Numerical Linear Algebra, Matrix Iteration	203
10.11 Newton and AF TP Jacobian Templates	210
10.12 Chapter Summary	211
Exercises	213
Computer Labs	213
References	214
11 Engineering Sciences, $n > 1$: $GWS^h \{N_k(\zeta_{\alpha}, \eta_j)\}$ implementations in the n-D computational engineering sciences	215
11.1 Introduction	215
11.2 Structural Mechanics	216
11.3 Structural Mechanics, Virtual Work FE Implementation	219
11.4 Plane Stress/Strain GWS^h Implementation	221
11.5 Plane Elasticity Computer Lab	224
11.6 Fluid Mechanics, Incompressible-Thermal Flow	226
11.7 Vorticity-Streamfunction $GWS^h + \theta TS$ Algorithm	231
11.8 An Isothermal INS Validation Experiment	234
11.9 Multimode Convection Heat Transfer	238
11.10 Mechanical Vibrations, Normal Mode GWS^h	242
11.11 Normal Modes of a Vibrating Membrane	245
11.12 Multiphysics Solid-Fluid Mass Transport	248
11.13 Chapter Summary	254
Exercises	257
Computer Labs	257
References	258
12 Conclusion	261
Index	263
