RILEM Technical Committee 116-PCD and contributors	xi
Preface	xiii
1 Introduction and problem statement	1
HUBERT K. HILSDORF	
References	3
2 Transport mechanisms and definitions	4
JÖRG KROPP, HUBERT K. HILSDORF, HORST GRUBE, CARMEN ANDRADE and LARS-OLOF NILSSON	
2.1 Diffusion	5
2.1.1 Diffusion coefficient	5
2.2 Permeation	7
2.2.1 Coefficient of permeability	7
2.2.2 Gas permeability	7
2.2.3 Water permeability	8
2.3 Capillary suction	9
2.3.1 Rate of absorption	10
2.3.2 Non-steady-state absorption	11
2.3.3 Steady state absorption	11
2.3.4 Mixed modes	11
2.4 Adsorption and desorption	12
2.5 Migration	12
2.6 References	13
3 Relations between different transport parameters	15
LARS-OLOF NILSSON and TANG LUPING	
3.1 Permeability vs diffusion coefficient in general	15
3.2 Moisture and water flow	16
3.2.1 Water permeability vs vapour diffusion	16
3.2.2 Moisture flow coefficient vs water permeability	17
3.2.3 Rate of water absorption vs water permeability	18
3.3 Gas flow	22
3.3.1 Gas permeability vs gas diffusion	22
3.3.2 Effect of moisture content	23
3.3.3 Diffusion of different gases	24
3.3.4 Gas permeability vs water permeability	25

vi Contents

3.3.5	Gas permeability vs rate of water absorption	25
3.4	Ion diffusion	25
3.4.1	Ion diffusion vs water permeability	27
3.4.2	Different ions	28
3.5	Conclusion	30
3.6	References	31
4	Parameters influencing transport characteristics	33
	JEAN-PIERRE OLLIVIER, MYRIAM MASSAT and LESLIE PARROTT	
4.1	Technological parameters (materials and execution) influencing water and gas permeability	33
4.1.1	Preliminary remarks: pure paste and concrete permeability	34
4.1.2	Permeability of Portland cement concrete without additions	36
4.1.3	Factors influencing permeability of Portland cement concrete	37
4.1.4	Conclusions	49
4.2	Technological parameters (materials and execution) influencing water absorption	49
4.2.1	Water absorption of OPC concrete without additives	49
4.2.2	Water absorption of concrete with additives	59
4.2.3	Conclusions	75
4.3	Environmental parameters influencing permeability	76
4.3.1	Introduction	76
4.3.2	Effect of moisture upon gas transport	76
4.3.3	Effect of moisture upon water absorption	83
4.3.4	Conclusions	91
4.4	References	92
5	Relations between transport characteristics and durability	97
	JÖRG KROPP	
5.1	Introduction	97
5.2	Carbonation	98
5.2.1	Gas permeability	103
5.2.2	Capillary suction of water	110
5.3	Sulphate attack	112
5.4	Alkali-aggregate reactions (AAR)	114
5.4.1	Alkali-silica reaction (ASR)	114
5.4.2	Alkali-carbonate reaction (ACR)	115
5.5	Frost resistance	116
5.6	Leaching	119
5.7	Soft water attack	119

5.8	Acid attack	120
5.9	Abrasion resistance	122
5.10	Chloride ingress	125
5.11	Corrosion of reinforcement	128
5.12	Conclusions	130
5.13	References	133
6	Chlorides in concrete	138
	JÖRG KROPP	
6.1	Sources of chlorides	138
6.1.1	Chloride-containing materials	138
6.1.2	Seawater exposure	139
6.1.3	Deicing salts	139
6.1.4	Fire	140
6.1.5	Other sources	140
6.2	Significance of chlorides for the durability of structures	141
6.2.1	Frost and deicing salt attack	141
6.2.2	Corrosion of reinforcement	142
6.2.3	Chemical attack	142
6.3	Types of chlorides in concrete	143
6.4	Critical chloride concentration	145
6.5	Transport mechanisms for chlorides	148
6.5.1	Permeation	149
6.5.2	Capillary suction	150
6.5.3	Diffusion	151
6.5.4	Mixed modes	154
6.6	Chloride profiles	155
6.7	Chemical analysis	157
6.7.1	Sampling	158
6.7.2	Analysis of the chloride content	160
6.8	References	161
7	Concrete compressive strength, transport characteristics and durability	165
	HUBERT K. HILSDORF	
7.1	The problem	165
7.2	Compressive strength and transport characteristics	166
7.2.1	Permeability	166
7.2.2	Capillary suction	173
7.2.3	Diffusion	176
7.3	Compressive strength and durability	178
7.3.1	Carbonation	178
7.3.2	Frost resistance	184
7.3.3	Abrasion resistance	186
7.4	Conclusions	193

viii Contents

7.5	References	195
8	Microstructure and transport properties of concrete EDWARD J. GARBOCZI	198
8.1	Introduction	198
8.2	Basic concepts	198
8.3	Description of connectivity by percolation theory	199
8.4	Pore size effects on transport properties	199
8.5	Cement paste	201
8.5.1	Pore connectivity	201
8.5.2	Pore size	204
8.5.3	Diffusivity of cement paste	204
8.6	Microstructure of mortar and concrete	204
8.6.1	Interfacial zone microstructure	205
8.6.2	Concrete considered as a composite material	206
8.6.3	Interfacial zone percolation	207
8.7	Critically needed future work	209
8.8	Conclusions and summary	210
8.9	References	211
9	Laboratory test methods METTE GEIKER, HORST GRUBE, TANG LUPING, LARS-OLOF NILSSON and CARMEN ANDRADE	213
9.1	Steady-state water permeation	213
9.1.1	Introduction	213
9.1.2	Test methods	214
9.1.3	Reproducibility	216
9.1.4	Standard test methods	216
9.1.5	Factors affecting the measured permeability	218
9.2	Non-steady-state water penetration	220
9.2.1	Introduction	220
9.2.2	Test methods	220
9.2.3	Reproducibility	222
9.2.4	Standard test methods	223
9.2.5	Factors affecting the measured water 'permeability'	223
9.3	Capillary suction	223
9.3.1	Introduction	223
9.3.2	Test methods	223
9.3.3	Reproducibility	225
9.3.4	Standard test methods	225
9.3.5	Factors affecting the measured capillary suction	225
9.4	Gas permeability	226
9.4.1	Introduction	226
9.4.2	Test methods	227
9.4.3	Performance of the test	229

9.4.4	Evaluation of the results, variability	230
9.5	Gas diffusion	231
9.5.1	Introduction	231
9.5.2	Test methods	231
9.5.3	Performance of the test	234
9.5.4	Evaluation of the results, variability	234
9.6	Transport of ions: ion diffusion in concentration gradients	235
9.6.1	Introduction	235
9.6.2	Steady-state method	235
9.6.3	Non-steady-state method	238
9.7	Transport of ions: electrical methods – theoretical background	239
9.7.1	Introduction	239
9.7.2	Processes in concrete submitted to an electrical field	240
9.7.3	Diffusion and migration phenomena	242
9.7.4	Nernst-Plank equation: stationary conditions	243
9.7.5	Calculation of D from the value of intensity: Nernst-Einstein equation	244
9.7.6	Experimental procedures for the determination of diffusivities in stationary regimes	245
9.8	Transport of ions: electrical methods - experimental techniques	248
9.8.1	Evaluation of experimental techniques	248
9.8.2	Discussion	251
9.9	References	252
10	On-site test methods	258
	K. PAULMANN and CHRISTER MOLIN	
10.1	Capillary suction and water penetration	258
10.1.1	Introduction	258
10.1.2	ISAT and modifications	259
10.1.3	Figg method and modifications	261
10.1.4	Standardized methods; commercially available apparatus	266
10.1.5	Reproducibility	267
10.1.6	Experimental parameters influencing absorption	268
10.1.7	Comments	268
10.2	Gas permeability	269
10.2.1	Introduction	269
10.2.2	Figg	269
10.2.3	Kasai	270
10.2.4	Paulmann	270
10.2.5	Germann method (GGT)	271

x Contents

10.2.6	Parrott	272
10.2.7	Reinhardt-Mijnsbergen	274
10.2.8	Schönlín	274
10.2.9	Torrent	274
10.3	Evaluation	275
10.4	References	277
11	Summary and conclusions	280
	JÖRG KROPP	
11.1	Scope and approach	280
11.2	The role of transport properties in corrosive actions	282
11.3	Experimentally verified correlations between transport properties and durability characteristics	283
11.3.1	Additional information needed	284
11.4	Cross-correlations between transport parameters	285
11.5	Recommended transport parameters and test methods	287
11.5.1	General	287
11.5.2	Potential test methods	288
11.5.3	Moisture condition of the test specimens	290
11.6	Effect of technological parameters of concrete	291
11.7	Alternative concepts	291
11.8	Further work needed	292
	Appendix A: A review of methods to determine the moisture conditions in concrete	294
	LESLIE PARROTT	
A.1	Introduction	294
A.2	Destructive methods	296
A.3	Relative humidity in concrete	299
A.4	Resistivity	302
A.5	Dielectric properties	303
A.6	Thermal properties	309
A.7	Infrared absorption	309
A.8	Neutron scattering	311
A.9	Discussion	313
A.10	Concluding remarks	316
A.11	References	316
	Appendix B. Conversion table for permeability units	322
	Index	323
