

Table of Contents

1	
Can the Future of Automobile Technology be Anticipated?	1
2	
Factors Influencing the Further Development of the Automobile	5
Product Innovations	5
Legislative Influences	7
New Technologies	12
Possible Long-Range Problems	13
3	
Styling and Vehicle Concepts	17
Styling—Will All Future Automobiles Look Alike?	17
New Vehicle Concepts	21
Styling with the Computer	23
4	
The Car Body	27
Aerodynamics	27
Streamlining for Lower Fuel Consumption	28
Aerodynamic Forces and Driving Stability	31
Shape Optimization with Laser and Computer	32
Variable Spoilers and Boundary Layer Control	36
Plastic Materials for the Car Body?	38
High-Strength Steel	40
Aluminum—A Question of Cost	40
Plastic Materials and the Question of Recycling	40

Passive Safety	42
Passenger Restraint Systems—"Procon-Ten"	
and Air Bag	43
Dummies for Crash Tests	47
Safety and the Computer	47
Noise	51
Suppression of Outside Noise Through Engine	
Encapsulation	52
Reduction of Inside Noise	52
CFC-Free Air-Conditioning	56
More Active Safety Through HUD and Telephone	58
Reduction of Evaporative Losses During Refueling	59

5

Chassis	61
ABS and TCS for All Cars?	63
Will Full-Time Four-Wheel Drive Succeed?	69
Four-Wheel Steering	73
Intelligent Suspension Systems	74
Leveling Devices	76
Adjustable Shock Absorbers	76
Active Suspension Systems	78
Tires	79
Appendix 5.1	
From Pound to Newton—Physical Units in Technology	83

6

Engines	85
Gasoline Engines	87
Mixture Formation, Ignition, Catalysts	88
What are the Chances for the Lean Burn Engine?	95
The Future Belongs to Variable Engine Control	101
Variable Valve Timing	103
Variable Compression	105
Diesel Engines	106
Electronic Diesel Engine Control	107
Direct Injection	110
The Problem of Soot Formation	113
More Power from Smaller Engines	119
More Valves; Rotary Valves	120
V-Engines and Oval Cylinders	122

Will the Two-Stroke Engine Return?	123
New Methods of Supercharging	127
New Materials for Engine Parts	136
Ceramics in the Combustion Chamber and in the Exhaust System	137
Connecting Rods Made of Fiber-Reinforced Resins	140

7

Transmissions	143
Will the Automatic Overtake the Manual Transmission?	144
Continuously Variable Transmissions (CVTs)	146
Start-Stop Systems	148

8

Quality	151
Reliability of Automotive Electronics	152
Corrosion Protection	154
Inspection with Intelligent Automatic Test Devices	155
The Increasing Importance of Preproduction Runs	158
Measurement and Test Facilities	159
The Wind Tunnel	159
The Crash Test Facility	161
The Servo-Hydraulic Laboratory	162
The Anechoic and Reverberant Chambers	163
The Emission Test Chassis Dynamometer	166
Proving Grounds	167

9

Solutions for Traffic-Related Problems	171
Optimization of Traffic Flow	172
Traffic Information Systems	173
Guidance Systems	175
Convoy Traffic	177
Distance-Sensing Devices	180
Parking Problems in Congested Areas	181
Alternative Fuels	182
Which Energies at What Cost?	183
Energy Storage in the Automobile	185
Energy Sources, Ozone and CO ₂ Problems	188

Alternative Power Plants	190
Alcohol and Hydrogen Engines	192
Rape Oil	194
High-Temperature Gas Turbines	195
Electric Drives, High-Energy Batteries and Hybrid Systems	197

10

New Technologies	203
Electronics in the Automobile	204
Modular Layout and Networks	205
Electromagnetic Compatibility	208
Alternative Materials	210
Fiber-Reinforced Plastic Materials	210
High-Strength Ceramics	212
Computer-Aided Development and Manufacturing	214
CAE for Vehicle Development and Production Control	215
Computer Integration and Information Flow	218
CIM as a Company Resource	220

11

Integrated Research Cars	223
The Influence of Integrated Research Cars on Production Models	223
The New IRVW IV-Futura	225

12

Phases of Technological Progress	231
--	-----

Additional Literature	235
