Preface	ix
Notation	xi
1 Early progress in machining	1
Bibliography	9
2 Electron beam machining (EBM)	10
2.1 Introduction	10
2.2 Basic equipment	10
2.3 Emission current	12
2.4 Theoretical considerations	13
2.5 Rates of material removal in EBM	19
2.6 Surface roughness of workpiece in EBM	22
2.7 Heat-affected zone	23
2.8 Applications of EBM	23
Bibliography	33
3 Ion beam machining	34
3.1 Introduction	34
3.2 Ion beam machining system	34
3.3 Collision mechanism	38
3.4 Rates of material removal in IBM	43
3.5 Accuracy and surface effects	47
3.6 Applications	47
Bibliography	53
4 Electrochemical machining	55
4.1 Introduction	55
4.2 Electrolysis	55
4.3 Development of the characteristics of ECM	57
4.4 Basic working principles	61

4.5	Industrial electrochemical machine	62
4.6	Rates of machining	63
4.7	Surface finish in ECM	67
4.8	Accuracy and dimensional control	68
4.9	Theory of shaping in ECM	69
4.10	Applications	76
4.11	Special ECM applications	80
	Bibliography	87
5	Laser machining	89
5.1	Introduction	89
5.2	Spontaneous emission of radiation	90
5.3	Stimulated emission	91
5.4	Laser oscillation	95
5.5	Types of laser	95
5.6	Laser beam characteristics	102
5.7	Effects of laser on materials	105
5.8	Effects of workpiece material	112
5.9	Rates of machining and heat-affected zones	113
5.10	Gas jet-assisted laser machining	114
5.11	Applications	117
	Bibliography	126
6	Electrodischarge machining	128
6.1	Introduction	128
6.2	Lazarenko relaxation (RC) circuit	128
6.3	Development of controlled pulse generators	130
6.4	Mechanism of material removal	133
6.5	Dielectric fluids	136
6.6	Tool materials	139
6.7	Metal removal rates	141
6.8	Surface effects and accuracy	141
6.9	Applications	145
	Bibliography	151
7	Plasma arc machining	153
7.1	Introduction	153
7.2	Basic equipment	153
7.3	Temperature effects	159
7.4	Mechanisms of plasma machining	160
7.5	Theoretical considerations	160
7.6	Removal rates	163

7.7	Surface effects	165
7.8	Applications	166
	Bibliography	169
8	Ultrasonic machining (USM)	170
8.1	Introduction	170
8.2	Principles of USM	170
8.3	Mechanism of material removal	177
8.4	Brittleness criterion	178
8.5	Effects of process conditions on rate of USM	178
8.6	Theory of material removal rates in USM	184
8.7	Surface finish	190
8.8	Accuracy	192
8.9	Applications	194
8.10	Ultrasonic twist drilling	195
8.11	Industrial ultrasonic machine	197
	Bibliography	197
9	Water-jet machining	199
9.1	Introduction	199
9.2	Basic equipment	199
9.3	Theoretical considerations	203
9.4	Advantages of WJM	203
9.5	Applications	204
	Bibliography	209
10	Specialized methods of machining	210
10.1	Introduction	210
10.2	Abrasive jet machining (AJM)	211
10.3	Chemical machining (milling)	211
10.4	Photochemical machining (PCM)	212
10.5	Electrojet machining	218
10.6	Anisotropic etching	218
10.7	Isotropic etching	220
10.8	Selective etching	220
10.9	Elastic emission machining (EEM)	223
	Bibliography	223
	Appendix: Basic atomic and electrical principles	225
A.1	Introduction	225
A.2	Basic properties of electricity	225
A.3	Bohr's theory of atomic structure and radiation	226

A.4 Other quantum numbers	228
A.5 Dual nature of matter	230
A.6 Conductors	232
A.7 Current flow	233
A.8 Insulators	234
A.9 Conversion of electrical energy to heat	235
Bibliography	236
Author index	237
Subject index	241
