**1 Durability performance of concrete structures** 1

*1.1 What Is Durability? 1*
*1.2 Deterioration Mechanisms of Concrete Structures 1*
*1.2.1 Carbonation-Induced Steel Corrosion 2*
*1.2.2 Chloride-Induced Steel Corrosion 2*
*1.2.3 External Sulphate Attack 3*
*1.2.4 Alkali-Silica Reaction 3*
*1.2.5 Freezing and Thawing 4*
*1.3 Deterioration Process of Concrete Structures 5*
*1.4 The Costs of Lack of Durability 7*
*1.5 Economical, Ecological and Social Impacts of Durability 8*
*1.6 Durability Design: The Classical Prescriptive Approach 9*
*1.6.1 Compressive Strength as Durability Indicator 10*
*1.6.2 Water/Cement Ratio as Durability Indicator 12*
*1.6.3 Cement Content as Durability Indicator 14*
*1.6.4 Cover Thickness as Durability Indicator 14*
*1.7 Durability Design: The Performance Approach 15*
*1.7.1 The "Durability Test" Question 15*
*1.7.2 Canadian Standards 16*
*1.7.3 Argentine and Spanish Codes 16*
*1.7.4 Japanese Architectural Code 17*
*1.7.5 Portuguese Standards 18*
*1.7.6 South African Standards 19*
*1.7.7 Swiss Standards 19*

*1.8 Concrete Permeability as "Durability Indicator" 21*
*1.9 Beyond 50 Years: Modelling 22*
*References 22*

**2 Permeability as key concrete property 27**

*2.1 Foundations of Permeation Laws 27*
*2.2 Relation between Permeability and Pore Structure of Concrete 28*
*2.3 Permeability as Key Concrete Property 28*
*2.3.1 Permeability for Liquids' Containment 29*
*2.3.1.1 ACI Low Permeability Concrete 29*
*2.3.1.2 Dams 29*
*2.3.1.3 Pervious Concrete 30*
*2.3.1.4 Liquid Gas Containers 31*
*2.3.2 Permeability for Gas Containment 32*
*2.3.2.1 Evacuated Tunnels for High-Speed Trains 32*
*2.3.2.2 Underground Gas "Batteries" 32*
*2.3.3 Permeability for Radiation Containment 33*
*2.3.3.1 Radon Gas 33*
*2.3.3.2 Nuclear Waste Disposal Containers 34*
*2.4 Permeability and Durability 36*
*References 37*

**3 Theory: concrete microstructure and transport of matter 41**

*3.1 Cement Hydration 41*
*3.1.1 Main Hydration Reactions and Resulting Changes 41*
*3.1.2 Hydrothermal Conditions for Hydration (Curing) 42*
*3.2 Microstructure of Hardened Concrete 43*
*3.2.1 Overview 43*
*3.2.2 Microstructure of Hardened Cement Paste 45*
*3.2.3 Interfacial Transition Zone 48*
*3.2.4 Pore Structure of Hardened Concrete 49*
*3.2.5 Binding 51*
*3.3 Water in the Pores of Hardened Concrete 51*
*3.4 Mechanisms of Transport of Matter through Concrete 52*
*3.4.1 Diffusion: Fick's Laws 52*
*3.4.2 Migration: Nernst-Planck Equation 54*
*3.5 Permeability 56*
*3.5.1 Laminar Flow of Newtonian Fluids. Hagen-Poiseuille Law 56*
*3.5.2 Water-Permeability: Darcy's Law 59*

3.5.3 *Permeation of Liquids through Cracks* 60
3.5.4 *Hagen-Poiseuille-Darcy Law for Gases* 60
3.5.5 *Relation between Permeability to Gases and Liquids* 61
3.6 *Knudsen and Molecular Gas Flow: Klinkenberg Effect* 62
3.7 *Capillary Suction and Water Vapour Diffusion* 67
3.7.1 *Capillary Suction: A Special Case of Water-Permeability* 67
3.7.2 *Water Vapour Diffusion* 69
3.8 *Transport Parameters and Pore Structure* 70
3.8.1 *Relationship between Transport Parameters and Pore Structure* 70
3.8.2 *Permeability Predictions: Theory vs Experiments* 72
3.8.2.1 *Gas- and Water-Permeability vs Pore Structure* 72
3.8.2.2 *Water Sorptivity vs Pore Structure* 73
3.9 *Theoretical Relationship between Transport Parameters* 75
*References* 76

**5 Torrent NDT method for coefficient of air-permeability 123**

5.1 *Introduction: Why a Separate Chapter?* 123
5.2 *The Origin* 123
5.3 *Fundamentals of the Test Method* 124
5.3.1 *Principles of the Test Method* 124
5.3.2 *Historical Evolution* 126
5.3.3 *Operation of the Instrument* 129
5.3.4 *Model for the Calculation of the Coefficient of Air-Permeability kT* 129
5.3.5 *Relation between $\Delta P$ and $\sqrt{t}$* 133
5.3.5.1 *Theoretical Linear Response* 133

5.3.5.2 *Lack of Linear Response: Possible Causes 135*
5.3.6 *Relation between L and kT. Thickness Correction 135*
5.3.6.1 *Relation between Test Penetration L and kT 135*
5.3.6.2 *Correction of kT for Thickness 137*
5.4 *Relevant Features of the Test Method 138*
5.5 *Interpretation of Test Results 139*
5.5.1 *Permeability Classes 139*
5.5.2 *Microstructural Interpretation 140*
5.6 *Repeatability and Reproducibility 141*
5.6.1 *Testing Variability: Repeatability 142*
5.6.2 *Within-Sample Variability 143*
5.6.3 *Global Variability 144*
5.6.4 *Reproducibility 145*
5.6.4.1 *Reproducibility for Same Brand 145*
5.6.4.2 *Reproducibility for Different Brands 148*
5.7 *Effects and Influences on kT 149*
5.7.1 *Influence of Temperature of Concrete Surface 150*
5.7.1.1 *Influence of Low Concrete Temperature 150*
5.7.1.2 *Influence of High Air Temperature and Solar Radiation 151*
5.7.2 *Influence of Moisture of Concrete Surface 151*
5.7.2.1 *Influence of Natural and Oven Drying on kT 154*
5.7.2.2 *Compensation of kT for Surface Moisture 157*
5.7.2.3 *Pre-conditioning of Laboratory Specimens for kT Measurements 160*
5.7.3 *Effect/Influence of Age on kT 161*
5.7.3.1 *Effect/Influence of Age on Young Concrete 162*
5.7.3.2 *Effect/Influence of Age on Mature Concrete 163*
5.7.4 *Influence of Vicinity of Steel Bars 165*
5.7.5 *Influence of the Conditions of the Surface Tested 167*
5.7.5.1 *Influence of Specimen Geometry and Surface 167*
5.7.5.2 *Influence of Curvature 168*
5.7.5.3 *Influence of Roughness 169*
5.7.5.4 *Effect/Influence of Surface Air-Bubbles 170*
5.7.6 *Influence of Initial Pressure $P_0$ 172*
5.7.7 *Influence of Porosity on the Recorded kT Value 172*

*5.8 Statistical Evaluation of kT Test Results 173*
*5.8.1 Statistical Distribution of kT Results 173*
*5.8.2 Central Value and Scatter Statistical Parameters 174*
*5.8.2.1 Parametric Analysis 174*
*5.8.2.2 Non-Parametric Analysis 175*
*5.8.3 Interpretation and Presentation of Results 176*
*5.9 Testing Procedures for Measuring kT in the Laboratory and On Site 180*
