Frequently Used Symbols and the Meaning of Symbols	<i>xv</i>
Principal SI Units and the US Equivalents	<i>xxiii</i>
SI Prefixes, Basic Units, Physical Constants, the Greek Alphabet	<i>xxv</i>
Important Notice Before Reading the Book	<i>xxvii</i>
Preface	<i>xxix</i>
About the Author	<i>xxxi</i>
Acknowledgements	<i>xxxiii</i>

1	Introduction	1
1.1	The Task of Design and Manufacture	1
1.2	Factors that Influence the Design of Engineering Structures	1
1.3	The Importance of Optimization in the Process of Design and the Selection of Structural Materials	3
1.4	Commonly Observed Failure Modes in Engineering Practice	4
1.5	Structures and the Analysis of Structures	5
	References	5
2	Stress	7
2.1	Definition of Average Stress and Stress at a Point	7
2.2	Stress Components and Equilibrium Equations	8
2.2.1	Stress Components	8
2.2.2	Equilibrium Equations	9
2.3	Stress Tensor	10
2.3.1	Mean and Deviatoric Stress Tensors	10
2.4	States of Stress	12
2.4.1	Uniaxial State of Stress	12
2.4.2	Two-dimensional State of Stress	14
2.4.3	Three-dimensional State of Stress	18
2.4.3.1	Stress on an Arbitrary Plane	20
2.4.3.2	Stress on an Octahedral Plane	21
2.4.3.3	Principal Stresses and Stress Invariants	22
2.5	Transformation of Stress Components	24
	References	28

3	Strain	29
3.1	Definition of Strain	29
3.1.1	Some Properties of Materials Associated with Strain	30
3.1.1.1	Poisson's Ratio	30
3.1.1.2	Volumetric Strain	30
3.1.1.3	Bulk Modulus	31
3.1.1.4	Modulus of Elasticity	32
3.1.1.5	Shear Modulus (Modulus of Rigidity)	32
3.2	Strain–Displacement Equations	33
3.3	Strain Tensors	35
3.3.1	Small Strain Tensor	35
3.3.2	Finite Strain Tensor	38
3.3.3	Mean and Deviatoric Strain Tensors	40
3.3.4	Principal Strains and Strain Invariants	41
3.3.4.1	Strain Tensor	41
3.3.4.2	Deviatoric Strain Tensor	42
3.4	Transformation of Strain Components	43
3.4.1	Mohr's Circle	44
3.5	Strain Measurement	44
	References	48
4	Mechanical Testing of Materials	51
4.1	Material Properties	51
4.2	Types of Material Testing	52
4.3	Test Methods Related to Mechanical Properties	52
4.4	Testing Machines and Specimens	52
4.4.1	Static Tensile Testing Machine and Specimens	52
4.4.2	Impact Testing Machine and Specimens	54
4.4.3	Hardness Testing Machine	54
4.4.4	Fatigue Testing Machines	56
4.5	Test Results	56
4.5.1	Static Tensile Test Results	56
4.5.1.1	Engineering Stress–Strain Diagram	56
4.5.1.2	Creep Diagram/Curve	62
4.5.1.3	Relaxation Diagram/Curve	62
4.5.2	Dynamic Test Results	63
4.5.2.1	Tensile, Flexural and Torsional Test Results	63
4.5.2.2	Toughness Test Results	64
4.5.2.3	Fracture Toughness Test Results	64
	References	64
5	Material Behavior and Yield Criteria	67
5.1	Elastic and Inelastic Responses of a Solid	67
5.2	Yield Criteria	67
5.2.1	Ductile Materials	71
5.2.1.1	Maximum Shear Stress Criterion (Tresca Criterion)	71

5.2.1.2	Distortional Energy Density Criterion (von Mises Criterion)	74
5.2.2	Brittle Materials	76
5.2.2.1	Maximum Normal Stress Criterion	76
5.2.2.2	Maximum Normal Strain Criterion	76
	References	78
6	Loads Imposed on Engineering Elements	79
6.1	Axial Loading	79
6.1.1	Normal Stress	81
6.1.2	The Principal Stress	82
6.2	Torsion	85
6.2.1	Elastic Torsion – Shear Stress and Strain Analysis	86
6.2.1.1	Prismatic Bars: Circular Cross-section	86
6.2.1.2	Prismatic Bars: Noncircular Cross-section	95
6.2.1.3	Thin-walled Structures	96
6.2.2	Warping (Distortion) of a Cross-section	101
6.2.3	Inelastic Torsion and Residual Stress	103
6.2.3.1	Residual Stress	105
6.3	Bending	109
6.3.1	Beam Supports, Types of Beams, Types of Loads	109
6.3.2	Internal Forces – Bending Moments (M_t), Shear Force (Q), Distributed Load (q)	111
6.3.3	Principal Moments of Inertia of an Area (I_1, I_2) and Extreme Values of Product of Inertia (I_{xy}) of an Area	112
6.3.3.1	Axes Parallel to the Centroidal Axes	114
6.3.3.2	Rotation of the Coordinate Axes at the Observed Point (Rotated Axes)	115
6.3.4	Symmetrical Bending	116
6.3.4.1	Pure Bending	116
6.3.4.2	Nonuniform Bending	122
6.3.5	Nonsymmetrical Bending	126
6.3.6	Loading of Thin-walled Engineering Elements; Shear Center	133
6.3.6.1	Shear Center	134
6.3.7	Beam Deflections	136
6.3.8	Bending of Curved Elements	140
6.4	Stability of Columns	149
6.4.1	Critical Buckling Force in the Elastic Range	150
6.4.1.1	Pin-ended Columns	150
6.4.1.2	Columns with Other End Conditions	153
6.4.2	Critical Buckling Stress in the Elastic Range	155
6.4.3	Buckling – Plastic Range	156
6.4.3.1	Local Buckling of the Column	157
6.5	Eccentric Axial Loads	159
6.5.1	Eccentric Axial Load Acting in a Plane of Symmetry	159
6.5.2	General Case of an Eccentric Axial Load	161
	References	164

7	Relationships Between Stress and Strain	167
7.1	Fundamental Considerations	167
7.2	Anisotropic Materials	169
7.3	Isotropic Materials	171
7.3.1	Determination of Hooke's Law – Method of Superposition	175
7.3.2	Engineering Constants of Elasticity	178
7.4	Orthotropic Materials	180
7.5	Linear Stress–Strain–Temperature Relations for Isotropic Materials	184
	References	186
8	Rheological Models	189
8.1	Introduction	189
8.2	Time-independent Behavior Modeling	190
8.2.1	Elastic Deformation Modeling	190
8.2.1.1	Hooke's Element (H Model)	190
8.2.2	Deformation Modeling after the Elastic Limit	192
8.2.2.1	Saint Venant Element (SV Model)	192
8.2.2.2	Saint Venant Element–Spring/(SV–Spring)	192
8.2.2.3	Saint Venant Element Spring–Spring/(SV Spring–Spring)	192
8.3	Time-dependent Behavior Modeling	194
8.3.1	Newton Element (N Model): Linear Viscous Dashpot Element	195
8.3.2	Maxwell Model ($M = H - N$)	195
8.3.2.1	Generalized Maxwell Model	197
8.3.3	Voigt–Kelvin Model ($K = H N$)	198
8.3.3.1	Generalized Voigt–Kelvin Model	199
8.3.4	Standard Linear Solid Model (SLS)	200
8.3.5	Voigt–Kelvin–Hooke's Model (K–H)	201
8.3.6	Burgers' Model	202
8.4	Differential Form of Constitutive Equations	205
	References	207
9	Creep in Metallic Materials	209
9.1	Introduction	209
9.2	Plastic Deformation – General	211
9.2.1	Slip	211
9.2.2	Cleavage	212
9.2.3	Twinning	213
9.2.4	Grain Boundary Sliding	213
9.2.5	Void Coalescence	214
9.3	The Creep Phenomenon and Its Geometrical Representation	214
9.3.1	Creep Deformation Maps and Fracture Mechanism Maps	216
9.3.1.1	Creep Deformation Mechanisms	216
9.3.1.2	Fracture Micromechanisms and Macromechanisms	220
9.3.1.3	Creep Fracture Mechanisms	221
9.3.2	Short-time Uniaxial Creep Tests, Creep Modeling and Microstructure Analysis	223

9.3.2.1	Short-time Uniaxial Creep Tests	223
9.3.2.2	Creep Modeling	225
9.3.2.3	Microstructure Analysis – Basic	227
9.3.3	Long-term Creep Behavior Prediction Based on the Short-time Creep Process	228
9.3.3.1	Extrapolation Methods	230
9.3.3.2	Time–Temperature Parameters	231
9.3.4	Multiaxial Creep	232
9.4	Relaxation Phenomenon and Modeling	234
	References	236
10	Fracture Mechanics	239
10.1	Introduction	239
10.2	Fracture Classification	240
10.3	Fatigue Phenomenon	242
10.3.1	Known Starting Points	242
10.3.2	Stress versus Life Curves (σ – N/S – N), Endurance Limit	242
10.4	Linear Elastic Fracture Mechanics (LEFM)	248
10.4.1	Basic Consideration	248
10.4.2	Crack Opening Modes	251
10.4.2.1	Stress Intensity Factor (K/SIF)	252
10.4.2.2	Plastic Zone Size around the Crack Tip	260
10.4.2.3	Plastic Zone Shape around the Crack Tip	263
10.5	Elastic–Plastic Fracture Mechanics (EPFM)	266
10.5.1	The J Integral	267
10.6	Experimental Determination of Fracture Toughness	270
10.6.1	Test Specimens: Shapes, Dimensions, Orientations and Pre-cracking	271
10.6.1.1	Shapes and Dimensions of the Specimens	271
10.6.1.2	Orientation of a Specimen Made from Base Material	272
10.6.1.3	Fatigue Pre-cracking	274
10.6.2	Fracture Toughness, K_{Ic} and the K – R Curve	274
10.6.2.1	R -curve (K – R Curve)	274
10.6.2.2	Plane Strain Fracture Toughness (K_{Ic}) Testing	277
10.6.3	Fracture Toughness J_{Ic} and the J – R Curve	279
10.6.3.1	R -curve (J – R Curve)	279
10.6.3.2	Fracture Toughness (J_{Ic}) Determination/Testing	280
10.7	Charpy Impact Energy Testing	284
10.8	Crack Propagation	288
10.8.1	Introduction	288
10.8.2	Fatigue Crack Growth	289
10.8.2.1	The Paris Equation	294
10.8.2.2	The Walker Equation	296
10.8.2.3	The Forman Equation	297
10.8.2.4	The Forman–Newman–de Koning Equation	297
10.8.3	Creep Crack Growth	297
10.8.4	Life Assessment of Engineering Components	298

- 10.8.4.1 Constant Amplitude Loading 298
- 10.8.4.2 Variable Amplitude Loading 298
- 10.8.5 Crack Closure 299
- 10.8.5.1 Elber Crack Closure Phenomenon 299
