Foreword	ix
Preface.....	xi
Author.....	xiii
1. Concrete Mix-Proportioning General Concepts	1
1.1 Introduction	1
1.2 Concrete Mix Proportioning	2
1.3 Understanding 'K' Better	3
1.3.1 Probability Distribution Curve for a Pair of Dice	3
1.3.2 Relationship among Standard Deviation, Average, and Data Distribution	4
1.4 Finding Water Cement Ratio for Target Strength	10
1.5 Checking the Limits on the Water Cement Ratio.....	10
1.5.1 Science Behind W/C and Minimum Cement Limit for Durability.....	11
1.6 Estimation of Water Content	11
1.7 Calculation of Cement Content.....	11
1.8 Aggregate Content	13
1.8.1 Purpose of Aggregates in Concrete	13
1.8.2 Proportioning of Aggregates	13
1.8.2.1 Aggregate Proportioning by Gradation or Particle-Size Distribution Method	15
1.8.2.2 Explanation for Calculating Combined Gradation.....	15
1.8.2.3 Explanation for Proportion of Aggregates by Absolute Volume.....	20
1.8.2.4 Challenges Faced in Manual Iteration for Aggregate Proportion.....	21
1.8.2.5 Excel Solver Iteration Method.....	21
1.8.3 Calculating the Aggregate Content.....	27
1.8.3.1 Air Content in Concrete	27
1.8.3.2 Entrapped Air Compared with Entrained Air.....	28
2. Proportioning Concretes: Rapid Method	37
2.1 Introduction	37
2.2 Calculation of Target Strength	37
2.3 Estimating Water Cement Ratio for Achieving the Strength	38
2.4 Estimating the Water Content and Aggregate Interproportions.....	39
2.5 Significance of Water Correction	41

2.6	Cement Content Calculation	42
2.7	Estimating Air Content	42
2.8	Aggregate Proportion and Content	43
2.9	Rapid Method Graphical	50
3.	ACI Method of Proportioning Concretes	69
3.1	Introduction	69
3.2	Estimating Water Cement Ratio	69
3.3	Estimating Water Content	69
3.4	Proportioning and Calculating Aggregate Contents	70
4.	DOE Method of Proportioning Concretes	81
4.1	Introduction	81
4.2	Target Strength Calculation	81
4.2.1	Target Strength for Air-Entrained Concrete	82
4.3	Estimating Water Cement Ratio to Achieve the Strength	83
4.4	Finding the Water Content	85
4.5	Cement Content	86
4.5.1	Cement Content Calculation When Fly Ash Is Used as Replacement	86
4.6	Aggregate Proportion and Content	87
5.	BRMCA Method of Proportioning Concretes	97
5.1	Introduction	97
5.2	Methodology	97
5.2.1	Mix Corrections and Records	98
5.3	Curve Fitting and Concrete Proportioning	100
5.3.1	Significance of Numbers	101
5.3.2	Mix Proportion from the Curve	102
5.4	Curve Fitting through Excel	102
6.	Unconventional Proportioning Methods and Special Concretes	109
6.1	Author's Method: Proportioning through Void Content Optimization	109
6.1.1	Introduction	109
6.1.2	Methodology	110
6.1.3	Heat Map and Interpretation	111
6.1.4	Strategy for Fixing Void Content to Get Optimized Concrete	112
6.1.5	Calculating Mix Proportions Based on Void Content	112
6.1.5.1	Calculating the Paste Content	112
6.2	Mix Proportioning of Self-Compacting Concrete	115
6.2.1	Introduction	115
6.2.2	EFNARC Guidelines	116
6.2.3	ICAR Guidelines	119

6.3	Mix Proportioning of Low-Density, Lightweight or High-Density, Heavyweight Concrete	121
6.3.1	Introduction.....	121
6.3.2	Methodology	122
6.4	Mix Design of Pervious Concrete or No Fines Concrete.....	124
6.4.1	Introduction.....	124
6.4.2	Methodology	124
6.5	Mix Proportioning of Shotcrete	125
6.5.1	Introduction.....	125
6.5.2	Procedure	125
6.6	Roller-Compacted Concrete Design.....	128
6.6.1	Introduction.....	128
6.6.2	Mix Proportioning.....	128
6.7	Designing Concretes for Targeted Chemistry of Concrete.....	130
7.	Optimization of Concrete	133
7.1	Introduction.....	133
7.2	Entropy Buster for Optimizing Concrete.....	133
7.2.1	Entropy Buster Methodology.....	134
7.2.2	Automation of Optimization Process	139
7.3	Optimizing in Multidimensions.....	144
7.3.1	Methodology	144
7.3.1.1	Interpretation of Regression Analysis.....	148
8.	Conducting Laboratory Tests and Validation of Mixes.....	151
8.1	Introduction	151
8.2	Correction for Moisture Content and Absorption in Aggregates	151
8.2.1	Different Conditions of Aggregates with respect to Moisture Content	152
8.2.2	Moisture Absorption Calculation and its Significance in Proportioning	152
8.2.3	What Would Happen If Moisture Correction Was Not Done.....	154
8.2.4	Moisture Correction for Oven-Dry Condition	157
8.3	Corrections in Batch and Their Effect on Mix Design.....	159
8.3.1	Change in Mix due to Compaction or Density Variation	159
8.3.2	Change in Mix due to Adjustments or Changes During Trials	161
8.4	Deciding Water-Reducing Admixture Dosage.....	163
	Bibliography.....	165
	Index	167
