<i>List of Figures</i>	xī
<i>List of Tables</i>	xīīī
<i>List of Abbreviations</i>	xīv
<i>Preface</i>	xv

1 Classics of Data-Driven BIM for Energy Efficient Design 1

<i>1.1 Background</i>	1
<i>1.2 BIM and Energy Efficient Design Problematisation</i>	2
<i>1.3 Objectives and Topical Investigation</i>	6
<i>1.4 Problem to Solution Discourse</i>	6
<i>1.5 Significance of the Study</i>	8
<i>1.6 The Outline</i>	9

2 Sustainability, Information and Optimisation: Antecedents of the Data and BIM-Enabled EED 13

<i>2.1 Paradigms of Sustainability, Information and Optimisation Theories</i>	13
2.1.1 Sustainability	13
2.1.2 Information Theory	14
2.1.3 Optimisation Theory	16
2.1.4 Trilateral Interaction	18
<i>2.2 Sustainable Construction Drivers</i>	20
<i>2.3 BIM and Sustainable Construction</i>	23
<i>2.4 Artificial Intelligence (AI)</i>	27
2.4.1 AI Application in Sustainable Construction	28
2.4.2 AI Application in BIM	28
<i>2.5 Calculative, Simulative, Predictive and Optimisation Methods for Energy Efficient Buildings</i>	29
2.5.1 Calculative Methods	30
2.5.2 Simulative Methods	30

- 2.5.3 Predictive Methods 31
- 2.5.4 Optimisation Methods 33
- 2.6 *Summary* 35

3 BIM and Energy Efficient Design

46

- 3.1 *Background* 46
- 3.2 *The Current State of the Art of BIM-EED* 47
 - 3.2.1 BIM-Compatible EED 49
 - 3.2.2 BIM-Integrated EED 49
 - 3.2.3 BIM-Inherited EED 50
 - 3.2.4 BIM-EED Adoption 50
 - 3.2.5 Simulation Software 51
 - 3.2.6 Interoperability 52
 - 3.2.7 Level of Details 54
- 3.3 *Themes and Gaps* 56
 - 3.3.1 Themes 56
 - 3.3.2 Outcomes 56
 - 3.3.3 Gaps 57
 - 3.3.3.1 Confusion 57
 - 3.3.3.2 Neglect 58
 - 3.3.3.3 Application 59
- 3.4 *The Future of BIM-EED* 59
- 3.5 *Implications* 62
- 3.6 *Summary* 62

4 Building Energy Parameters

69

- 4.1 *Building Energy Parameters* 69
 - 4.1.1 Physical Properties and Building Envelop 69
 - 4.1.2 Building Layout 70
 - 4.1.3 Occupant Behaviour 71
 - 4.1.4 HVAC and Appliances 71
- 4.2 *Delphi* 72
 - 4.2.1 Round 1 73
 - 4.2.2 Round 2 76
 - 4.2.3 Round 3 80
- 4.3 *Summary* 82

5 AI Algorithms Development

86

- 5.1 *Dataset Generation* 86
- 5.2 *Data Size Reduction* 92
 - 5.2.1 An Overview 92

5.2.2	Metaheuristic-Parametric Approach in Data Size Reduction	92
5.3	<i>Data Interpretation Approach</i>	97
5.4	<i>AI Development</i>	98
5.4.1	Introduction	98
5.4.2	Artificial Neural Network	99
5.4.2.1	ANN Model Configuration and Performance Analysis	100
5.4.2.2	Final ANN Model	103
5.4.3	Decision Tree	104
5.4.3.1	An Overview	104
5.4.3.2	DT Model Configuration and Performance Analysis	106
5.4.4	Hybrid Objective Function Development	114
5.5	<i>Summary</i>	120
6	BIM-Inherited EED Framework Development and Verification	124
6.1	<i>Optimisation Procedure</i>	124
6.2	<i>Integration Framework</i>	125
6.2.1	Database Development	127
6.2.2	Database Exchange	129
6.2.3	Database Optimisation	130
6.2.4	Database Switchback	132
6.2.5	Database Updated	132
6.3	<i>Testing and Validation</i>	134
6.3.1	Case Study	134
6.3.2	Energy Simulation	136
6.3.3	Baseline Case Simulation Results	137
6.3.4	Case Optimisation Procedure	139
6.3.5	Case Optimisation Results	139
6.3.6	Optimisation Reliability Tests	143
6.4	<i>Sensitivity Analysis</i>	147
6.5	<i>Summary</i>	150
7	Conclusion	152
7.1	<i>Review of Background, Problem, Aim and Method</i>	152
7.2	<i>Review of Research Processes and Findings</i>	154
7.2.1	Objective 1: Examining the Potential and Challenges of BIM to Optimise Energy Efficiency in Residential Buildings	154
7.2.2	Objective 2: Identifying Variables That Play Key Roles in Energy Consumption of Residential Buildings	156

7.2.3	Objective 3: Investigating the AI-Based Algorithms in Energy Optimisation	158
7.2.4	Objective 4: Developing a Framework of AI Application in BIM in Terms of Energy Optimisation Purposes and Processes	160
7.2.5	Objective 5: Assessing and Validating the Functionality of the Framework Using Case Studies	161
7.3	<i>Contribution to Knowledge</i>	162
7.3.1	Originality	162
7.3.2	Implications for Practice	163
7.4	<i>Limitations</i>	164
7.5	<i>Recommendations for Future Studies</i>	165
