

Table of Contents

Preface	VII
Organization	IX
 <i>1. Deep excavations</i>	
Selected topics in numerical simulation of supported excavations <i>R.J. Finno & X. Tu</i>	3
Determination of soil parameters for modeling of deep excavations utilizing an inverse approach <i>M.M. Zimmerer & T. Schanz</i>	21
Comparison and feasibility of three dimensional finite element modelling of deep excavations using non-linear soil models <i>H.C. Yeow, D.P. Nicholson & B. Simpson</i>	29
Lessons learned from case studies of excavation support systems through Chicago glacial clays <i>R.J. Finno & C. Rechea</i>	35
Influence of the construction procedure on the displacements of excavation walls <i>A. Hettler, T. Keiter & B. Mumme</i>	47
 <i>2. Diaphragm walls</i>	
Finite element analysis of the excavation of the new Garibaldi station of Napoli underground <i>L. de Sanctis, A. Mandolini & G.M.B. Viggiani</i>	57
The impact of diaphragm wall construction on the serviceability of adjacent strip foundations in soft ground <i>R. Schäfer & Th. Triantafyllidis</i>	69
A comparison between monitoring data and numerical calculation of a diaphragm wall construction in Rotterdam <i>A. Lächler, H.P. Neher & G. Gebeyehu</i>	83
Small scale model tests on fresh concrete pressure in diaphragm wall panels <i>C. Loreck, D. König & Th. Triantafyllidis</i>	97
Metro line U5 Berlin – Deformation of diaphragm walls <i>L. Speier, S. Görtz & U. Schran</i>	105
 <i>3. Soil improvement</i>	
Vibro stone column installation and its effect on ground improvement <i>F. Kirsch</i>	115
On modelling vibro-compaction of dry sands <i>G. Heibrock, S. Keßler & Th. Triantafyllidis</i>	125
FE simulations of the installation of granular columns in soft soils <i>T. Meier & R. Cudmani</i>	133

4. Tunnelling

Large scale three-dimensional finite element analysis of underground construction <i>F.H. Lee, K.K. Phoon & K.C. Lim</i>	141
Iterative solution of intersecting tunnels using the generalised Jacobi preconditioner <i>K.K. Phoon, F.H. Lee & S.H. Chan</i>	155
Numerical modelling of a reinforcement process by umbrella arch <i>S. Eclaircy-Caudron, D. Dias, R. Kastner & L. Chantron</i>	165

5. Ground freezing

An elastic-viscoplastic model for frozen soils <i>R. Cudmani</i>	177
Numerical and physical modeling of artificial ground freezing <i>A. Sres, E. Pimentel & G. Anagnostou</i>	185
Freezing of jet-grouted soil – comparison of numerical calculations and field data <i>M. Kelm & J. Raschendorfer</i>	193
FE-analysis of ground freezing for the construction of a tunnel cross connection <i>R. Cudmani & S. Nagelsdiek</i>	201
Ground freezing: an efficient method to control the settlements of buildings <i>C. Kellner, N. Vogt, W. Orth & J.-M. Konrad</i>	211
Underground line U5 ‘Unter den Linden’ Berlin, Germany Structural and thermal FE-calculations for ground freezing design <i>B. Brun & H. Haß</i>	225

6. Piling

Numerical modelling of pile jacking, driving and vibratory driving <i>K.-P. Mahutka, F. König & J. Grabe</i>	235
Bored and screwed piles, continuum and discontinuum approaches <i>A. Schmitt & R. Katzenbach</i>	247
Numerical simulation of construction-induced stresses around Rammed Aggregate Piers <i>D.J. White, H.T.V. Pham & K.J. Wissmann</i>	257
Numerical modelling of the case history of a piled raft with a viscohypoplastic model <i>F. García, A. Lizcano & O. Reul</i>	265
Failure of a micro-pile wall during remodelling of a hotel: a backanalysis <i>P.C. Prat</i>	273

7. Numerical modelling and miscellaneous

Incorporation of meta-stable structure into hypoplasticity <i>D. Mašín</i>	283
Numerical simulation of consolidation and deformation of pulpy fine slimes due to re-contouring and covering of large uranium mill tailing ponds at Wismut <i>U. Barnekow, M. Haase & M. Paul</i>	291
Numerical simulation of underground works and application to cut and cover construction <i>Th. Zimmermann, A. Truty & J.L. Sarf</i>	297
Effects of spatial variability of cement-treated soil on undrained bearing capacity <i>K. Kasama, K. Zen & A.J. Whittle</i>	305
