

CONTENTS

Preface to the second edition v

Preface to the first edition vii

1. Plastics as a structural material 1

- 1.1 Introduction 1
- 1.2 Plastics suitable for structural applications 2
- 1.3 The general mechanical behavior of plastics 3
- 1.4 The fire resistance of plastics 9
- 1.5 Design with plastics 11

2. Reinforced plastics 24

- 2.1 Reinforcing materials 24
- 2.2 Glass 24
- 2.3 Jute and sisal reinforcement 25
- 2.4 Asbestos reinforcement 26
- 2.5 Graphite or carbon fiber reinforcement 27
- 2.6 Boron fiber reinforcement 28
- 2.7 Aramid fiber reinforcement 28
- 2.8 Whiskers and microfibers 30
- 2.9 Mica, wollastonite, and other filler reinforcements 30
- 2.10 Manufacturing processes for reinforced plastics 31
- 2.11 Design recommendations for the choice of a process 38
- 2.12 Fiberglass reinforced polyester 38
- 2.13 Jute fiber reinforced polyester 82
- 2.14 Asbestos reinforced polyester 86
- 2.15 Glass fiber reinforced epoxy composites 88
- 2.16 Phenolic, melamine, and silicone resin composites 101
- 2.17 Reinforced vinyl ester composites 103
- 2.18 High-performance composites 105
- 2.19 SMC/BMC 122
- 2.20 Reinforced thermoplastics 130

3. Low density core materials 142

- 3.1 Introduction 142
- 3.2 Rigid polyurethane foam 143

- 3.3 Expanded polystyrene 158
- 3.4 Expanded polyvinylchloride (PVC) 159
- 3.5 Phenolic foam 160
- 3.6 Polyester foam 171
- 3.7 Polysulfone foam 172
- 3.8 Structural foams 173
- 3.9 Poisson's ratio of the low-density core materials 179
- 3.10 Reinforced plastics honeycomb cores 179

4. Sandwich construction 187

- 4.1 Introduction 187
- 4.2 Sandwich behavior under transverse loading 187
- 4.3 Sandwich failure under compressive end loads 195
- 4.4 Rectangular sandwich panel under transverse loading 197
- 4.5 Buckling of a rectangular sandwich panel under compressive end loads 201
- 4.6 Analysis of a rectangular sandwich panel in bending 205
- 4.7 Analysis of a rectangular sandwich panel in buckling 207

5. Architectural forms for use with plastics 209

- 5.1 Introduction 209
- 5.2 Folded plate structures 209
- 5.3 Shell structures 214
- 5.4 Stressed skin systems 218

6. Analysis of folded plate structures 221

- 6.1 Existing classical methods for the analysis of folded plates 221
- 6.2 A modified approach to the analysis of folded plate structures in plastics 222

7. Prismatic folded plate structures 226

- 7.1 The influence of connections 226
- 7.2 The analysis of an internal unit 226
- 7.3 The analysis of the external unit 235

8. Composite folded plate structures 247

- 8.1 The composite folded plate rigid frame 247
- 8.2 The composite folded plate barrel vault 247

- 8.3 The analysis of the barrel vault 248
- 8.4 Design and testing of a prototype composite folded plate barrel vault of sandwich construction 258

9. Shell structures 275

- 9.1 Shell structures in plastics 275
- 9.2 Design of a FRP dome of single skin construction 275
- 9.3 The barrel shell 295
- 9.4 The hyperbolic paraboloid (hypar) 300

10. Stressed skin structures 306

- 10.1 Skeleton analysis 306
- 10.2 Flat prismatic plates under axial compression 306
- 10.3 Angle sections under axial compression 308
- 10.4 Effect of variation of the angle of bend 310
- 10.5 Effect of material properties 311
- 10.6 Prismatic folded plates 311
- 10.7 Nonprismatic folded plates 314
- 10.8 Stiffness method of analysis 317
- 10.9 Finite elements method 331
- 10.10 STRUDL Coding and analysis for a folded plate, conical, FRP dome structure in single skin construction 332

11. Miscellaneous structures 346

- 11.1 Inflatables 346
- 11.2 Plastics radomes 351
- 11.3 Tensioned structures 353
- 11.4 Prefabricated low-cost housing 355
