Foreword	9
COST	10
Executive summary	11
 1 Introduction	 13
2 Geotechnical analysis	15
2.1 Introduction	15
2.2 Design objectives	15
2.3 Design requirements	16
2.4 Theoretical considerations	17
2.4.1 Requirements for a general solution	17
2.4.2 Equilibrium	17
2.4.3 Compatibility	18
2.4.4 Equilibrium and compatibility conditions	19
2.4.5 Constitutive behaviour	19
2.5 Geometric idealization	20
2.5.1 Plane strain	20
2.5.2 Axi-symmetry	21
2.6 Methods of analysis	21
2.7 Closed form solutions	22
2.8 Simple methods	23
2.8.1 Limit equilibrium	24
2.8.2 Stress field solution	24
2.8.3 Limit analysis	25
2.8.4 Comments	26
2.9 Numerical analysis	27
2.9.1 Beam-spring approach	27
2.9.2 Full numerical analysis	28
 3 Constitutive models	 30
3.1 Basic soil behaviour	30
3.1.1 Introduction	30

3.1.2	<i>Compression of the soil skeleton</i>	30
3.1.3	<i>Shearing of the soil skeleton</i>	31
3.1.4	<i>Undrained behaviour of soils</i>	33
3.2	Soil models	34
3.2.1	<i>Introduction</i>	34
3.2.2	<i>First generation of constitutive models</i>	35
3.2.3	<i>Second generation of constitutive models</i>	39
3.2.4	<i>Third generation of constitutive models</i>	42
3.2.5	<i>Alternative frameworks for soil models</i>	47
4	Determination of material parameters	49
4.1	Direct determination of physical parameters	49
4.1.1	<i>Types of soil parameters</i>	49
4.1.2	<i>Determination of consolidation and stiffness properties</i>	49
4.1.3	<i>Determination of strength properties</i>	50
4.2	Parameter determination by optimization	51
4.2.1	<i>General</i>	51
4.2.2	<i>Tangent relationships under mixed control</i>	52
4.2.3	<i>Integration algorithm</i>	53
4.2.4	<i>Optimization of model parameters</i>	54
4.2.5	<i>Example: optimization of model parameters for stabilized sulphide-rich silty clay</i>	56
5	Non-linear analysis	58
5.1	Introduction	58
5.2	Material non-linearity	58
5.2.1	<i>Tangent stiffness method</i>	59
5.2.2	<i>Visco-plastic method</i>	60
5.2.3	<i>Modified Newton–Raphson method</i>	64
5.2.4	<i>Comparison of the solution strategies</i>	67
5.3	Geometric non-linearity	70
5.3.1	<i>Formulation of the problem</i>	70
5.3.2	<i>Stress and strain tensors</i>	71
5.3.3	<i>Numerical implementation</i>	72
5.3.4	<i>Pitfalls</i>	74
5.4	Coupled consolidation analysis	76
5.4.1	<i>Introduction</i>	76
5.4.2	<i>Implementation</i>	77

6	Modelling structures and interfaces	80
6.1	Introduction	80
6.2	Modelling structural components	80
6.2.1	<i>Introduction</i>	80
6.2.2	<i>Strain definitions</i>	81
6.2.3	<i>Constitutive equation</i>	82
6.2.4	<i>Membrane elements</i>	83
6.3	Modelling interfaces	85
6.3.1	<i>Introduction</i>	85
6.3.2	<i>Zero thickness interface elements</i>	85
7	Boundary and initial conditions	88
7.1	Introduction	88
7.2	Local axes	88
7.3	Prescribed displacements	89
7.4	Tied degrees of freedom	91
7.5	Springs	93
7.6	Boundary stresses	95
7.7	Point loads	96
7.8	Body forces	97
7.9	Construction	98
7.10	Excavation	99
7.11	Pore pressures	101
7.12	Infiltration	103
7.13	Sources and sinks	103
7.14	Precipitation	104
7.14.1	<i>Tunnel problem</i>	104
7.14.2	<i>Rainfall infiltration</i>	105
7.15	Initial stresses	105
8	Guidelines for input and output	107
8.1	Introduction	107
8.2	Basic information	107

8.3	Input	107
8.3.1	<i>Plot of the finite element mesh</i>	107
8.3.2	<i>Plot of boundary conditions</i>	108
8.3.3	<i>Plot of soil strata</i>	108
8.3.4	<i>Table of used material parameters and material models</i>	108
8.3.5	<i>Plots illustrating the behaviour of the chosen material models</i>	108
8.3.6	<i>Plots showing the initial stress conditions, pore water pressures and state variables</i>	109
8.3.7	<i>Table of solution stages and convergence criteria</i>	110
8.4	Output	110
8.4.1	<i>Plot of the deformed element mesh</i>	110
8.4.2	<i>Plot of displacement vectors</i>	110
8.4.3	<i>Contours of stress and strain</i>	110
8.4.4	<i>Contours of stress levels and state variables</i>	112
8.5	Conclusion	113
9	Modelling specific types of geotechnical problems	114
9.1	General aspects	114
9.1.1	<i>Size of problem domain</i>	114
9.1.2	<i>Appropriate use of numerical analysis</i>	114
9.1.3	<i>Parametric studies of the effects of chosen input parameters</i>	115
9.2	Piles and piled rafts	116
9.2.1	<i>General aspects</i>	116
9.2.2	<i>Soil behaviour aspects</i>	116
9.2.3	<i>Interface elements</i>	116
9.2.4	<i>2D or 3D analysis</i>	116
9.2.5	<i>Lateral loading</i>	117
9.2.6	<i>Back analysis of pile tests</i>	117
9.3	Tunnelling	118
9.3.1	<i>Scope of the problem</i>	118
9.3.2	<i>Type of numerical analysis</i>	118
9.3.3	<i>Methods of 2D approximation of the 3D tunnel face effect</i>	120
9.3.4	<i>Tunnelling—size of problem domain</i>	122
9.3.5	<i>Construction sequence</i>	123
9.3.6	<i>Hydraulic problems: groundwater in tunnelling</i>	127
9.3.7	<i>Boundary and initial conditions</i>	127
9.3.8	<i>Water table drawdown and seepage during tunnel construction</i>	129

9.4	Deep basements	131
9.4.1	<i>Modelling building load, stiffness of buildings and surcharge loading</i>	131
9.4.2	<i>Soil/retaining wall interface problems</i>	132
9.4.3	<i>Props and anchor modelling</i>	132
9.4.4	<i>Prediction of ground movements in deep basement analyses</i>	133
9.4.5	<i>Water drawdown and underwater construction</i>	135
9.4.6	<i>Modelling wall installation, excavation and pore pressure equalization</i>	136
9.4.7	<i>Constitutive models for walls</i>	136
9.4.8	<i>Modelling accidental over-dig</i>	137
10	Limitations and pitfalls in full numerical analyses	138
10.1	Introduction	138
10.2	Discretization errors	139
10.2.1	<i>Errors originating from incorrect data</i>	139
10.2.2	<i>Errors originating from the dimensions of the mesh</i>	140
10.2.3	<i>Errors originating from inadequate identification of features</i>	140
10.2.4	<i>Boundary conditions</i>	140
10.2.5	<i>The selection of elements</i>	141
10.2.6	<i>Density and refinement of the mesh</i>	142
10.3	Modelling of structural members in plane strain analysis	142
10.4	Construction problems	145
10.5	Underwater excavation	146
10.6	Lack of consistency in input parameters	146
11	Benchmarking	148
11.1	Introduction	148
11.2	Specifications for benchmark examples	148
11.3	Example No. 1—Tunnel excavation	149
11.3.1	<i>Specification of problem</i>	149
11.3.2	<i>Selected results</i>	150
11.4	Example No. 2—Deep excavation	150
11.4.1	<i>Specification of problem</i>	150
11.4.2	<i>Selected results</i>	152

11.5	Example No. 3—Tied-back deep excavation	153
11.5.1	<i>Background</i>	153
11.5.2	<i>Specification of problem</i>	154
11.5.3	<i>Brief summary of assumptions of submitted analyses</i>	158
11.5.4	<i>Selected results</i>	158
11.6	Example No. 4—Undrained analysis of a shield tunnel	160
11.6.1	<i>Specification of problem</i>	160
11.6.2	<i>Selected results</i>	162
11.6.3	<i>Corrected results</i>	164
11.7	Conclusions	167
12	References	169
