Contents

Preface iii

1. Social Acceptance of Autonomous Driving – The Importance of Public Discourse and Citizen Participation 1
Teresa Brell, Ralf Philipsen, Hannah Biermann and Martina Ziefle
2. Artificial Intelligence for Autonomous Vehicle Fleets: Desired Requirements, Solutions and a Best Practice Project 18
Giovanni Prestifilippo
3. Large-scale Simulation of a Mobility-on-Demand System for the German City Aachen 29
Paul Mathias and Paul Dowideit
4. Artificial Intelligence for Fleets of Autonomous Vehicles: Desired Requirements and Solution Approaches 55
Matthias Dziubany, Sam Kopp, Lars Creutz, Jens Schneider, Anke Schmeink and Guido Dartmann
5. Future Urban Mobility: Designing New Mobility Technologies in Open Innovation Networks 84
David Hedderich, Markus Kowalski and Volker Lücken
6. Communication and Service Aspects of Smart Mobility: Improving Security, Privacy and Efficiency of Mobility Services by Utilizing Distributed Ledger Technology 100
Ahmad Ayad, Johannes Borsch and Anke Schmeink
7. Pseudonym Management through Blockchain: Cost-efficient Privacy Preservation on Smart Transportation 121
Shihan Bao, Yue Cao, Ao Lei, Haitham Cruickshank and Zhili Sun
8. Simulation Platforms for Autonomous Driving and Smart Mobility: Simulation Platforms, Concepts, Software, APIs 151
Lars Creutz, Sam Kopp, Jens Schneider, Matthias Dziubany, Yannick Becker and Guido Dartmann

9. Deep-Learning Based Depth Completion for Autonomous Driving Applications 183
Christian Lanius, David Hedderich, Shawan Mohammed, Gerd Ascheid and Volker Lücken

10. Artificial Intelligence Based on Modular Reinforcement Learning and Unsupervised Learning 214
Shawan Taha Mohammed, Angelo Mihaltan, Kemal Acar, Hendrik Laux and Gerd Ascheid

11. Functional Safety of Deep Learning Techniques in Autonomous Driving Systems 228
Zheyi Chen, Pu Tian, Weixian Liao and Wei Yu

Index 246
