<i>Foreword</i>	ix
<i>Preface</i>	xi
<i>Acknowledgments</i>	xiii

Chapter 1 Analysis of Dynamic Systems

1.1	Introduction	1
1.2	Constraints, Generalized Coordinates, and Degrees of Freedom	1
1.3	Linear Dynamic Systems	3
1.4	Classification of Vibrations	3
1.5	Linear Single-Degree-of-Freedom (SDOF) System	4
1.6	Linear Multiple-Degree-of-Freedom (MDOF) System	11
1.7	Random Vibrations	17
1.8	Summary	30
	References	30
	Additional References	30

Chapter 2 Response of Dynamic Systems Using Numerical Integration Methods

2.1	Introduction	31
2.2	Explicit Schemes	32
2.3	Implicit Schemes	35
2.4	Case Study	40
2.5	Summary	56
	References	56

**Chapter 3 Description of the Railway Vehicle Models
and Track Geometry**

3.1	Introduction	58
3.2	Types of Mathematical Models	58
3.3	Solution Techniques	60
3.4	Dynamic Models	62
3.5	Performance of Railway Vehicles	64
3.6	Performance Criteria	65
3.7	Description of Track Geometry and FRA Track Safety Standards	80
3.8	Analytical Representation of Track Geometry	85
3.9	Summary	101
	References	101
	Additional References	102

Chapter 4 Wheel–Rail Rolling Contact Theories

4.1	Introduction	103
4.2	Creep	103
4.3	Creep Forces	105
4.4	Wheel–Rail Rolling Contact Problem	107
4.5	Classification of Wheel–Rail Rolling Contact Theories	110
4.6	Wheel–Rail Rolling Contact Theories	111
4.7	Summary	130
	References	132

Chapter 5 Modeling of Rail Vehicle Components

5.1	Introduction	135
5.2	Rail Vehicle Truck Configurations and Suspensions	135
5.3	Suspension Characteristics	141
5.4	Equations of Motion of a Wheel–Axle Set on a Tangent Track	144
5.5	Equations of Motion for a Wheel–Axle Set Negotiating an Arbitrarily Changing Radius Curve	160
5.6	Truck Model	165
5.7	Summary	176
	References	176

Chapter 6 Tangent Track Response of Railway Vehicles

6.1	Introduction	177
6.2	Freight Car Vertical and Roll Dynamics Model	178
6.3	Six-Axle Locomotive Response Model	188
6.4	Passenger Car Lateral Response Model	209
6.5	Summary	223
	References	224
	Additional References	224

Chapter 7 Lateral Stability of Railway Vehicles on Tangent Track

7.1	Introduction	225
7.2	Lateral Stability	225
7.3	Freight Car Lateral Stability Model	226
7.4	Locomotive Lateral Stability Model	239
7.5	Passenger Car Lateral Stability Model	257
7.6	Summary	261
	References	262
	Additional References	262

Chapter 8 Response of Railway Vehicles on Curved Track

8.1	Introduction	263
8.2	Classification of Curving Models	264
8.3	Elements of Curving Models	264
8.4	Freight Car Curving Models	265
8.5	Locomotive/Passenger Car Curving Models	288
8.6	Summary	330
	References	330

Chapter 9 Train Dynamics

9.1	Introduction	332
9.2	Definition of Generic Terms	332
9.3	Fundamentals of Longitudinal Train Dynamics	333
9.4	Train Components and Their Mathematical Models	335
9.5	Train Dynamics Models	343
9.6	Applications of Train Dynamics Models	362
9.7	Summary	366
	References	366

Chapter 10 Interaction between Railway Vehicles and Bridges

10.1	Introduction	367
10.2	Vehicle and Truss Bridge Interaction	367
10.3	Bridge Impact Due to Various Sources	383
10.4	Summary	385
	References	385

Chapter 11 Validation of Railway Vehicle System Models

11.1	Introduction	387
11.2	The Need for Model Validation	387
11.3	Model Validation versus Performance Testing	388

viii **Contents**

11.4	Types of Models	388
11.5	Dynamic Processes or Vehicle Performance Considerations	390
11.6	Validation Criteria	391
11.7	Validation of a Time-Domain Model	395
11.8	Summary	400
	References	400
	Additional References	400
 <i>Index</i>		 401
