

Contents

Preface	ix
Author Biography	xiii
Acknowledgements	xv
Chapter 1 Introduction	1
1.1 Overview of sEMG-based stiffness transfer	1
1.2 Overview of robot learning motion skills from humans	3
1.3 Overview of robot intelligent control design	6
References	8
Chapter 2 Robot Platforms and Software Systems	17
2.1 Baxter robot	17
2.2 Nao robot	18
2.3 KUKA LBR iiwa robot	19
2.4 Kinect camera	20
2.5 MYO Armband	20
2.6 Leap Motion	21
2.7 Oculus Rift DK 2	22
2.8 MATLAB Robotics Toolbox	23
2.9 CoppeliaSim	25
2.10 Gazebo	26
References	27
Chapter 3 Human-Robot Stiffness Transfer-Based on sEMG Signals	29
3.1 Introduction	29
3.2 Brief introduction of sEMG signals	30
3.3 Calculation of human arm Jacobian matrix	30
3.4 Stiffness estimation	32
3.4.1 Incremental stiffness estimation method	32
3.4.2 Stochastic perturbation method	33
3.5 Interface design for stiffness transfer	35
3.6 Human-robot stiffness mapping	37

3.7	Stiffness transfer for various tasks	39
3.7.1	Comparative tests for lifting tasks	39
3.7.2	Writing tasks	43
3.7.3	Human-robot-human writing skill transfer	45
3.7.4	Plugging-in task	52
3.8	Conclusion	57
	References	57

Chapter 4 Learning and Generalization of Variable Impedance Skills 61

4.1	Introduction	61
4.2	Overview of the framework	62
4.3	Trajectory segmentation	63
4.3.1	Data segmentation using difference method	63
4.3.2	Beta process autoregressive hidden Markov model	64
4.4	Trajectory alignment methods	67
4.5	Dynamical movement primitives	67
4.6	Modeling of impedance skills	68
4.7	Experimental study	70
4.7.1	Learning writing tasks	70
4.7.2	Pushing tasks	71
4.7.3	Cutting and lift-place tasks	74
4.7.4	Water-lifting tasks	82
4.8	Conclusion	87
	References	88

Chapter 5 Learning Human Skills from Multimodal Demonstration 91

5.1	Introduction	91
5.2	System Description	92
5.3	HSMM-GMR Model Description	94
5.3.1	Data Modeling with HSMM	94
5.3.2	Task Reproduction with GMR	95
5.4	Impedance Controller in Task Space	96
5.5	Experimental Study	98
5.5.1	Button-pressing Task	98
5.5.2	Box-pushing Task	100
5.5.3	Pushing Task	101
5.5.4	Experimental Analysis	108
5.6	Conclusion	109
	References	110

Chapter 6 Skill Modeling Based on Extreme Learning Machine 113

6.1	Introduction	113
6.2	System of teleoperation-based robotic learning	114
6.2.1	Overview of teleoperation demonstration system	114
6.2.2	Motion Capture Approach based on Kinect	115

6.2.3	Measurement of angular velocity by MYO armband	120
6.2.4	Communication between Kinect and V-REP	120
6.3	Human/robot joint angle calculation using Kinect camera	121
6.4	Processing of demonstration data	123
6.4.1	Dynamic time warping	123
6.4.2	Kalman Filter	125
6.4.3	Dragon naturally speaking system for verbal command	126
6.5	Skill modeling using extreme learning machine	126
6.6	Experimental study	129
6.6.1	Motion Capture for Tracking of Human Arm Pose	129
6.6.2	Teleoperation-Based demonstration in VREP	130
6.6.3	VR-based teleoperation for task demonstration	132
6.6.4	Writing Task	134
6.7	Conclusion	140
	References	140
Chapter 7 Neural Network-Enhanced Robot Manipulator Control		143
7.1	Introduction	143
7.2	Problem description	144
7.3	Learning from multiple demonstrations	145
7.3.1	Gaussian mixture model	146
7.3.2	Fuzzy Gaussian mixture model	146
7.4	Neural networks techniques	148
7.4.1	Radial basis function neural network	148
7.4.2	Cerebellar model articulation neural networks	149
7.5	Robot manipulator controller design	149
7.5.1	NN-based controller for robotic manipulator	149
7.5.2	Adaptive admittance controller	154
7.6	Experimental study	155
7.6.1	Test of the adaptive admittance controller	155
7.6.2	Test of the NN-based controller	158
7.6.3	Pouring task	158
7.7	Conclusion	162
	References	162
