

Contents

Introduction	11
Physical quantities	13
Units of measurement of physical quantities	13
Pressure, Pa	16
Barometric pressure, Pa	16
Manometric pressure, Pa	17
Absolute pressure, Pa	17
Pressure Sources	18
Heat, J, Nm, Ws	18
Work, J, Nm, Ws	18
Energy, J, Nm, Ws	19
Temperature, K, °C, °F, (there are other units as well)	19
Amount of substance	20
Power, W	22
The principle of conservation of the amount of substances	22
Substance Balance for the system	23
Energy balance for the system	23
Total system energy	23
Enthalpy – Gibbs function	23
Work Balance	24
Heat balance	25

The First Law of thermodynamics	25
Amount of heat	25
Specific heat	26
Characteristic parameters of gases – gas constants	29
Characteristic parameters of gases – gas mixtures, definitions, signs	29
Laws describing mixtures	30
Boundary work ($p\Delta V$ Work).	32
Ambient pressure work.	35
Flow process work ($V\Delta p$ Work)	36
Friction	42
Machines and engines	42
Balance of heat, work, internal energy, enthalpy	44
Thermal equation of gas state	45
Mayer equation	45
Relationship between parameters	46
Gibbs equation – another version	46
Thermodynamic processes, gas transformations for ideal gas	48
Isothermal process	48
Isochoric Process	50
Isobaric Process	51
Adiabatic Process	53

Isentropic process	55
Polytrophic process	55
Thermodynamic cycles	57
Engine, heat engine	58
Refrigerator, heat pump	61
Energy efficiency of heat engine	62
Energy efficiency of refrigerator	63
Energy efficiency of heat pump	63
Second law of thermodynamics	63
Kelvin equation	64
The Carnot cycle	64
The temperature–entropy diagram, T-s diagram	68
The T-s diagram, clockwise cycles	68
The Carnot cycle in T-s diagram, the clockwise cycles	70
The Carnot cycle in T-s diagram, the anticlockwise cycles	71
The Carnot cycle comparison of p-V diagram and T-s diagram	72
Internal combustion engine	73
A Wankel engine	76
Air standard cycles vs actual cycles	77
Ideal and actual Otto cycle	82
Ideal and actual Diesel cycle	83

Ideal dual cycle – limited pressure cycle	85
Gas turbine engines	86
Power plant with gas turbine	90
Exergy, J	92
Description of the properties of the medium	93
States of matter	96
Changes in the state of matter under the impact of heat	97
Vapour, steam	101
Energy boiler	108
Steam turbine	108
Steam thermal power plant	110
Specific liquid and vapour enthalpy	112
Steam power plant – Rankine cycle	112
Steam power plant – Hirn cycle	115
Steam and gas power plant	117
Dependence of values for the wet steam parameters	118
The refrigeration cycle	119
A heat pump cycle	122
A heat pump – heat balance	123
Combustion	124
Fuel characteristics	125
Net and gross calorific value	129

Hess' law	129
Composition of gaseous fuels	130
Composition of liquid and solid fuels	131
Combustion reactions – stoichiometric calculations	133
Determination of calorific value of solid and liquid fuels	134
Calorimeter of gaseous fuels	136
Theoretical (stoichiometric) oxygen (air) demand for combustion of solid and liquid fuels	137
Theoretical (minimal) oxygen (air) demand for combustion of gaseous fuels	138
Excess Air Coefficient	139
Dependence of the ignition and combustion temperature on the excess air coefficient	140
Amount of exhaust gas	142
Amount of heat flowing out of the flue gas (heat losses)	145
Gasification	147
Fuel Calorific Values	149
Heat flow	151
Conduction heat transfer	152
Convection heat transfer	155
Overall heat transfer coefficient	157
Radiation heat transfer – Prevost Theory of Heat Exchange	158
Radiation, Emission, Absorbance, Reflectance, Transmittance	159

Planck radiation law	161
Wien's displacement law	163
Stefan – Boltzmann law	163
Kirchhoff's law of thermal radiation	164
Lambert's cosine law	164
Heat exchanger	165
Emission and absorption of radiation in gases	169
References	172
