

Contents

Introduction	7
Topic 1. Fundamental elements of statistics	9
Topic 2. Methods for describing sets of data	12
2.1. Tabular methods for describing qualitative data	12
2.2. Graphical methods for describing qualitative data	13
2.3. Tabular descriptive methods for describing quantitative data	15
2.4. Graphical methods for describing quantitative data	16
Topic 3. Descriptive statistics	22
3.1. Numerical measures of central tendency	22
3.2. Numerical measures of variability	29
3.3. Skewness	32
3.4. Example of data analysis in Excel	34
Topic 4. Random variables. Discrete and continuous random variable	38
4.1. Probability distributions of discrete random variables	38
4.2. Probability distributions for continuous random variables	41
Topic 5. Sampling and sampling distributions	48
5.1. Sampling distribution of the sample mean $\bar{X}$	51
5.2. Sampling distribution of the sample proportion p	54
Topic 6. Point and interval estimation	57
6.1. Confidence interval for a population mean	59
6.2. Confidence interval for population proportion (large sample)	64
6.3. Determining the sample size	66
Topic 7. Hypothesis tests	70
7.1. Test of hypothesis about a population mean	72
7.2. Test of hypothesis about a population proportion	76
7.3. The Chi-Square Test of Independence	79

Topic 8. Correlation	85
8.1. Pearson coefficient of correlation	85
8.2. Spearman rank correlation coefficient.....	89
Topic 9. Linear regression models	93
9.1. Simple linear regression model.....	93
9.2. Multiple linear regression.....	99
Topic 10. Time series and its components	106
10.1. Trend.....	106
10.2. Seasonality.....	111
Topic 11. Index numbers	119
11.1. Price index	119
11.2. Quantity index.....	123
Bibliography.....	126
