

CONTENTS

PREFACE

xv

1 INTRODUCTION

1

1.1 Preliminary Comments / 1

1.2 The Role of Energy Methods and Variational Principles / 2

1.3 Some Historical Comments / 2

1.4 Present Study / 4

References / 5

2 MATHEMATICAL PRELIMINARIES

8

2.1 Introduction / 8

2.2 Vectors / 9

2.2.1 Definition of a Vector / 9

2.2.2 Scalar and Vector Products / 11

2.2.3 Components of a Vector / 15

2.2.4 Summation Convention / 16

2.2.5 Vector Calculus / 19

2.2.6 Integral Relations / 24

2.3 Tensors / 29

2.3.1 Second-Order Tensors / 29

2.3.2 General Properties of a Dyadic / 32

2.3.3 Nonion Form of a Dyadic / 32

- 2.3.4 Eigenvectors Associated with Dyadics / 36
- Exercises / 41
- References / 47

3 REVIEW OF EQUATIONS OF SOLID MECHANICS

48

- 3.1 Introduction / 48
 - 3.1.1 Classification of Equations / 48
 - 3.1.2 Descriptions of Motion / 49
- 3.2 Conservation of Linear and Angular Momenta / 50
 - 3.2.1 Equations of Motion / 50
 - 3.2.2 Symmetry of Stress Tensor / 53
- 3.3 Kinematics of Deformation / 54
 - 3.3.1 Strain Tensor / 54
 - 3.3.2 Strain Compatibility Equations / 58
- 3.4 Constitutive Equations / 62
 - 3.4.1 Introduction / 62
 - 3.4.2 Generalized Hooke's Law / 62
 - 3.4.3 Plane Stress Constitutive Relations / 65
 - 3.4.4 Thermoelastic Constitutive Relations / 66
 - Exercises / 69
 - References / 78

4 WORK, ENERGY, AND VARIATIONAL CALCULUS

79

- 4.1 Concepts of Work and Energy / 79
- 4.2 Strain Energy and Complementary Strain Energy / 84
- 4.3 Virtual Work / 95
- 4.4 Calculus of Variations / 102
 - 4.4.1 The Variational Operator / 102
 - 4.4.2 Functionals / 106
 - 4.4.3 The First Variation of a Functional / 106
 - 4.4.4 Fundamental Lemma of Variational Calculus / 107
 - 4.4.5 Extremum of a Functional / 108
 - 4.4.6 Euler Equations / 110
 - 4.4.7 Natural and Essential Boundary Conditions / 112
 - 4.4.8 Minimization of Functionals with Equality Constraints / 117

Exercises / 123

References / 132

5 ENERGY PRINCIPLES OF STRUCTURAL MECHANICS **133**

5.1 Virtual Work Principles / 133

5.1.1 Introduction / 133

5.1.2 The Principle of Virtual Displacements / 133

5.1.3 Unit-Dummy-Displacement Method / 137

5.2 Principle of Total Potential Energy and Castigliano's Theorem I / 142

5.2.1 Principle of Minimum Total Potential Energy / 142

5.2.2 Castigliano's Theorem I / 146

5.3 Principles of Virtual Forces and Complementary Potential Energy / 151

5.4 Principle of Complementary Potential Energy and Castigliano's Theorem II / 156

5.5 Betti's and Maxwell's Reciprocity Theorems / 164

Exercises / 169

References / 176

6 DYNAMICAL SYSTEMS: HAMILTON'S PRINCIPLE **177**

6.1 Introduction / 177

6.2 Hamilton's Principle for Particles and Rigid Bodies / 177

6.3 Hamilton's Principle for a Continuum / 183

6.4 Hamilton's Principle for Constrained Systems / 190

6.5 Rayleigh's Method / 196

Exercises / 198

References / 203

7 DIRECT VARIATIONAL METHODS **204**

7.1 Introduction / 204

7.2 Concepts from Functional Analysis / 205

7.2.1 General Introduction / 205

7.2.2 Linear Vector Spaces / 206

7.2.3 Normed and Inner Product Spaces / 211

7.2.4	Transformations, and Linear and Bilinear Forms / 215
7.2.5	Minimum of a Quadratic Functional / 216
7.3	The Ritz Method / 221
7.3.1	Introduction / 221
7.3.2	Description of the Method / 222
7.3.3	Properties of Approximation Functions / 225
7.3.4	Ritz Equations for the Parameters / 226
7.3.5	General Features of the Method / 230
7.3.6	Examples / 232
7.4	General Boundary-Value Problems / 245
7.4.1	Variational Formulations / 245
7.4.2	Ritz Approximations / 254
7.5	Weighted-Residual Methods / 259
7.5.1	Introduction / 259
7.5.2	Galerkin's Method / 262
7.5.3	Least-Squares Method / 263
7.5.4	Collocation Method / 263
7.5.5	Eigenvalue and Time-Dependent Problems / 264
7.5.6	Equations for Undetermined Parameters / 266
7.5.7	Examples / 267
7.6	Summary / 288
	Exercises / 289
	References / 297

8 THEORY AND ANALYSIS OF PLATES

299

8.1	Introduction / 299
8.1.1	General Comments / 299
8.1.2	An Overview of Plate/Shell Theories / 301
8.2	Classical Plate Theory / 305
8.2.1	Governing Equations of Circular Plates / 305
8.2.2	Analysis of Circular Plates / 312
8.2.3	Governing Equations in Rectangular Coordinates / 334
8.2.4	Navier Solutions of Rectangular Plates / 342
8.2.5	Lévy Solutions of Rectangular Plates / 356
8.2.6	Variational Solutions: Bending / 362
8.2.7	Variational Solutions: Vibration / 379

8.2.8	Variational Solutions: Buckling / 384
8.3	Shear Deformation Plate Theory / 396
8.3.1	Governing Equations of Circular Plates / 396
8.3.2	Governing Equations in Rectangular Coordinates / 398
8.3.3	Exact Solutions of Axisymmetric Circular Plates / 401
8.3.4	Exact Solutions of Rectangular Plates / 405
8.3.5	Relationships Between Bending Solutions of Classical and Shear Deformation Theories / 412
8.3.6	Variational Solutions of Circular and Rectangular Plates / 421
	Exercises / 425
	References / 430

9 THE FINITE ELEMENT METHOD

433

9.1	Introduction / 433
9.2	Finite Element Analysis of Bars / 434
9.2.1	Governing Equation / 435
9.2.2	Representation of the Domain by Finite Elements / 435
9.2.3	Approximation over an Element / 436
9.2.4	Weak Form / 441
9.2.5	Finite Element Equations / 442
9.2.6	Assembly (or Connectivity) of Elements / 445
9.2.7	Imposition of the Boundary Conditions / 448
9.2.8	Calculation of Reactions and Derivatives of Solution: Postprocessing / 449
9.3	Finite Element Analysis of the Euler–Bernoulli Beam Theory / 454
9.3.1	Governing Equation / 454
9.3.2	Weak Form over an Element / 455
9.3.3	Derivation of the Approximation Functions / 456
9.3.4	Finite Element Model / 458
9.3.5	Assembly of Element Equations / 459
9.3.6	Imposition of Boundary Conditions / 461
9.4	Finite Element Models of the Timoshenko Beam Theory / 463
9.4.1	Governing Equations / 463
9.4.2	Displacement Finite Element Models / 464
9.4.3	Reduced Integration Element (RIE) / 466

- 9.4.4 Consistent Interpolation Element (CIE) / 467
- 9.4.5 Superconvergent Element (SCE) / 469
- 9.5 Finite Element Models of the Classical Plate Theory / 471
 - 9.5.1 Introduction / 471
 - 9.5.2 General Formulation / 472
 - 9.5.3 Conforming and Nonconforming Plate Elements / 474
 - 9.5.4 Fully Discretized Finite Element Models / 475
- 9.6 Finite Element Models of the First-Order Shear Deformation Plate Theory / 479
 - 9.6.1 Governing Equations and Weak Forms / 479
 - 9.6.2 Finite Element Model / 480
 - 9.6.3 Numerical Integration / 483
- Exercises / 493
- References / 499

10 MIXED VARIATIONAL FORMULATIONS

502

- 10.1 Introduction / 502
 - 10.1.1 General Comments / 502
 - 10.1.2 Mixed Variational Principles / 502
 - 10.1.3 Extremum and Stationary Behavior of Functionals / 505
- 10.2 Stationary Variational Principles / 506
 - 10.2.1 The Minimum Total Potential Energy Principle / 506
 - 10.2.2 The Hellinger–Reissner Variational Principle / 508
 - 10.2.3 The Reissner Variational Principle / 513
- 10.3 Variational Solutions Based on Mixed Formulations / 514
- 10.4 Mixed Finite Element Models of Beams / 517
 - 10.4.1 The Euler–Bernoulli Beam Theory / 517
 - 10.4.2 The Timoshenko Beam Theory / 523
- 10.5 Mixed Finite Element Models of the Classical Plate Theory / 527
 - 10.5.1 Preliminary Comments / 527
 - 10.5.2 Mixed Model I / 527
 - 10.5.3 Mixed Model II / 532
- 10.6 Closure / 539
 - Exercises / 539
 - References / 542

ANSWERS/SOLUTIONS TO SELECTED PROBLEMS	544
