
Contents

1	Introduction	1
1.1	Active versus Passive	1
1.2	Vibration Suppression.....	4
1.3	Smart Materials and Structures	5
1.4	Control Strategies	7
1.4.1	Feedback	8
1.4.2	Feedforward	9
1.5	The Various Steps of the Design.....	10
1.6	Plant Description, Error and Control Budget	13
1.7	Readership and Organization of the Book	15
1.8	Problems	16
2	Some Concepts in Structural Dynamics	17
2.1	Introduction	17
2.2	Equation of Motion of a Discrete System	17
2.3	Vibration Modes	18
2.4	Modal Decomposition	20
2.4.1	Structure without Rigid Body Modes	20
2.4.2	Dynamic Flexibility Matrix	21
2.4.3	Structure with Rigid Body Modes	23
2.4.4	Example	26
2.5	Collocated Control System	27
2.5.1	Transmission Zeros and Constrained System	30
2.6	Continuous Structures	32
2.7	Guyan Reduction.....	33
2.8	Craig-Bampton Reduction	35
2.9	Problems	37

3	Electromagnetic and Piezoelectric Transducers	41
3.1	Introduction	41
3.2	Voice Coil Transducer	41
3.2.1	Proof-Mass Actuator	43
3.2.2	Geophone	45
3.3	General Electromechanical Transducer	46
3.3.1	Constitutive Equations	46
3.3.2	Self-sensing	47
3.4	Reaction Wheels and Gyrostabilizers	48
3.5	Smart Materials	50
3.6	Piezoelectric Transducer	50
3.6.1	Constitutive Relations of a Discrete Transducer	51
3.6.2	Interpretation of k^2	55
3.6.3	Admittance of the Piezoelectric Transducer	56
3.7	Problems	58
4	Piezoelectric Beam, Plate and Truss	61
4.1	Piezoelectric Material	61
4.1.1	Constitutive Relations	61
4.1.2	Coenergy Density Function	64
4.2	Hamilton's Principle	66
4.3	Piezoelectric Beam Actuator	66
4.3.1	Hamilton's Principle	66
4.3.2	Piezoelectric Loads	68
4.4	Laminar Sensor	71
4.4.1	Current and Charge Amplifiers	71
4.4.2	Distributed Sensor Output	71
4.4.3	Charge Amplifier Dynamics	73
4.5	Spatial Modal Filters	73
4.5.1	Modal Actuator	73
4.5.2	Modal Sensor	75
4.6	Active Beam with Collocated Actuator-Sensor	76
4.6.1	Frequency Response Function	77
4.6.2	Pole-Zero Pattern	78
4.6.3	Modal Truncation	79
4.7	Admittance of a Beam with a Piezoelectric Patch	80
4.8	Piezoelectric Laminate	83
4.8.1	Two Dimensional Constitutive Equations	83
4.8.2	Kirchhoff Theory	83
4.8.3	Stiffness Matrix of a Multi-layer Elastic Laminate	85
4.8.4	Multi-layer Laminate with a Piezoelectric Layer	86
4.8.5	Equivalent Piezoelectric Loads	87
4.8.6	Sensor Output	87
4.8.7	Beam Model vs. Plate Model	89
4.8.8	Additional Remarks	92

4.9	Active Truss	92
4.9.1	Open-Loop Transfer Function	96
4.9.2	Admittance Function	97
4.10	Finite Element Formulation	97
4.11	Problems	98
5	Passive Damping with Piezoelectric Transducers	103
5.1	Introduction	103
5.2	Resistive Shunting	104
5.3	Inductive Shunting	106
5.4	Switched Shunt	109
5.4.1	Equivalent Damping Ratio	112
5.5	Problems	114
6	Collocated versus Non-collocated Control	117
6.1	Introduction	117
6.2	Pole-Zero Flipping	118
6.3	The Two-Mass Problem	119
6.3.1	Collocated Control	120
6.3.2	Non-collocated Control	121
6.4	Notch Filter	123
6.5	Effect of Pole-Zero Flipping on the Bode Plots	124
6.6	Nearly Collocated Control System	124
6.7	Non-collocated Control Systems	126
6.8	The Role of Damping	129
6.9	Problems	129
7	Active Damping with Collocated System	131
7.1	Introduction	131
7.2	Lead Control	133
7.3	Direct Velocity Feedback (DVF)	135
7.4	Positive Position Feedback (PPF)	137
7.5	Integral Force Feedback (IFF)	140
7.6	Duality between the Lead and the IFF Controllers	145
7.6.1	Root-Locus of a Single Mode	145
7.6.2	Open-Loop Poles and Zeros	147
7.7	Actuator and Sensor Dynamics	147
7.8	Decentralized Control with Collocated Pairs	149
7.8.1	Cross Talk	149
7.8.2	Force Actuator and Displacement Sensor	149
7.8.3	Displacement Actuator and Force Sensor	150
7.9	Problems	150

8	Vibration Isolation	155
8.1	Introduction	155
8.2	Relaxation Isolator	157
8.2.1	Electromagnetic Realization	160
8.3	Active Isolation	161
8.3.1	Sky-Hook Damper	162
8.3.2	Integral Force Feedback	163
8.4	Flexible Body	165
8.4.1	Free-Free Beam with Isolator	167
8.5	Payload Isolation in Spacecraft	170
8.5.1	Interaction Isolator/Attitude Control	170
8.5.2	Gough-Stewart Platform	171
8.6	Six-Axis Isolator	172
8.6.1	Relaxation Isolator	173
8.6.2	Integral Force Feedback	174
8.6.3	Spherical Joints, Modal Spread	175
8.7	Active vs. Passive	177
8.8	Car Suspension	179
8.9	Problems	184
9	State Space Approach	187
9.1	Introduction	187
9.2	State Space Description	189
9.2.1	Single Degree of Freedom Oscillator	189
9.2.2	Flexible Structure	190
9.2.3	Inverted Pendulum	191
9.3	System Transfer Function	193
9.3.1	Poles and Zeros	194
9.4	Pole Placement by State Feedback	195
9.4.1	Example: Oscillator	197
9.5	Linear Quadratic Regulator	198
9.5.1	Symmetric Root Locus	199
9.5.2	Inverted Pendulum	199
9.6	Observer Design	201
9.7	Kalman Filter	203
9.7.1	Inverted Pendulum	204
9.8	Reduced Order Observer	206
9.8.1	Oscillator	206
9.8.2	Inverted Pendulum	207
9.9	Separation Principle	208
9.10	Transfer Function of the Compensator	208
9.10.1	The Two-Mass Problem	209
9.11	Problems	213

10 Analysis and Synthesis in the Frequency Domain	215
10.1 Gain and Phase Margins	215
10.2 Nyquist Criterion	216
10.2.1 Cauchy's Principle	216
10.2.2 Nyquist Stability Criterion	217
10.3 Nichols Chart	221
10.4 Feedback Specification for SISO Systems	222
10.4.1 Sensitivity	222
10.4.2 Tracking Error	223
10.4.3 Performance Specification	223
10.4.4 Unstructured Uncertainty	224
10.4.5 Robust Performance and Robust Stability	225
10.5 Bode Gain-Phase Relationships	228
10.6 The Bode Ideal Cutoff	231
10.7 Non-minimum Phase Systems	233
10.8 Usual Compensators	235
10.8.1 System Type	235
10.8.2 Lead Compensator	237
10.8.3 PI Compensator	238
10.8.4 Lag Compensator	239
10.8.5 PID Compensator	239
10.9 Multivariable Systems	239
10.9.1 Performance Specification	240
10.9.2 Small Gain Theorem	241
10.9.3 Stability Robustness Tests	241
10.9.4 Residual Dynamics	243
10.10 Problems	244
11 Optimal Control	247
11.1 Introduction	247
11.2 Quadratic Integral	247
11.3 Deterministic LQR	248
11.4 Stochastic Response to a White Noise	250
11.4.1 Remark	251
11.5 Stochastic LQR	251
11.6 Asymptotic Behavior of the Closed-Loop	252
11.7 Prescribed Degree of Stability	254
11.8 Gain and Phase Margins of the LQR	255
11.9 Full State Observer	257
11.9.1 Covariance of the Reconstruction Error	258
11.10 Kalman-Bucy Filter (KBF)	258
11.11 Linear Quadratic Gaussian (LQG)	259
11.12 Duality	260
11.13 Spillover	261
11.13.1 Spillover Reduction	263

11.14 Loop Transfer Recovery (LTR)	264
11.15 Integral Control with State Feedback	265
11.16 Frequency Shaping	266
11.16.1 Frequency-Shaped Cost Functionals	266
11.16.2 Noise Model	270
11.17 Problems	271
12 Controllability and Observability	275
12.1 Introduction	275
12.1.1 Definitions	275
12.2 Controllability and Observability Matrices	276
12.3 Examples	278
12.3.1 Cart with Two Inverted Pendulums	278
12.3.2 Double Inverted Pendulum	279
12.3.3 Two d.o.f. Oscillator	280
12.4 State Transformation	281
12.4.1 Control Canonical Form	282
12.4.2 Left and Right Eigenvectors	283
12.4.3 Diagonal Form	284
12.5 PBH Test	284
12.6 Residues	285
12.7 Example	286
12.8 Sensitivity	287
12.9 Controllability and Observability Gramians	288
12.10 Internally Balanced Coordinates	289
12.11 Model Reduction	291
12.11.1 Transfer Equivalent Realization	291
12.11.2 Internally Balanced Realization	292
12.11.3 Example	293
12.12 Problems	294
13 Stability	299
13.1 Introduction	299
13.1.1 Phase Portrait	300
13.2 Linear Systems	301
13.2.1 Routh-Hurwitz Criterion	302
13.3 Lyapunov's Direct Method	303
13.3.1 Introductory Example	303
13.3.2 Stability Theorem	303
13.3.3 Asymptotic Stability Theorem	305
13.3.4 Lasalle's Theorem	305
13.3.5 Geometric Interpretation	306
13.3.6 Instability Theorem	307
13.4 Lyapunov Functions for Linear Systems	308
13.5 Lyapunov's Indirect Method	309

13.6	An Application to Controller Design	310
13.7	Energy Absorbing Controls	311
13.8	Problems	313
14	Applications	317
14.1	Digital Implementation	317
14.1.1	Sampling, Aliasing and Prefiltering	318
14.1.2	Zero-Order Hold, Computational Delay	319
14.1.3	Quantization	320
14.1.4	Discretization of a Continuous Controller	321
14.2	Active Damping of a Truss Structure	322
14.2.1	Actuator Placement	322
14.2.2	Implementation, Experimental Results	324
14.3	Active Damping Generic Interface	326
14.3.1	Active Damping	326
14.3.2	Experiment	329
14.3.3	Pointing and Position Control	330
14.4	Active Damping of a Plate	330
14.4.1	Control Design	332
14.5	Active Damping of a Stiff Beam	334
14.5.1	System Design	334
14.6	The HAC/LAC Strategy	335
14.6.1	Wide-Band Position Control	337
14.6.2	Compensator Design	339
14.6.3	Results	339
14.7	Vibroacoustics: Volume Displacement Sensors	342
14.7.1	QWSIS Sensor	343
14.7.2	Discrete Array Sensor	346
14.7.3	Spatial Aliasing	349
14.7.4	Distributed Sensor	351
14.8	Problems	357
15	Tendon Control of Cable Structures	359
15.1	Introduction	359
15.2	Tendon Control of Strings and Cables	360
15.3	Active Damping Strategy	361
15.4	Basic Experiment	363
15.5	Linear Theory of Decentralized Active Damping	364
15.6	Guyed Truss Experiment	368
15.7	Micro Precision Interferometer Testbed	370
15.8	Free Floating Truss Experiment	372
15.9	Application to Cable-Stayed Bridges	375
15.10	Laboratory Experiment	375
15.11	Control of Parametric Resonance	375
15.12	Large Scale Experiment	377

16 Active Control of Large Telescopes	385
16.1 Introduction	385
16.2 Adaptive Optics	387
16.3 Active Optics	390
16.3.1 Monolithic Primary Mirror	391
16.3.2 Segmented Primary Mirror	392
16.4 SVD Controller	394
16.4.1 Loop Shaping of the SVD Controller	394
16.5 Dynamics of a Segmented Mirror	395
16.6 Control-Structure Interaction	397
16.6.1 Multiplicative Uncertainty	397
16.6.2 Additive Uncertainty	399
16.6.3 Discussion	400
17 Semi-active Control	403
17.1 Introduction	403
17.2 Magneto-Rheological Fluids	404
17.3 MR Devices	406
17.4 Semi-active Suspension	406
17.4.1 Semi-active Devices	406
17.5 Narrow-Band Disturbance	410
17.5.1 Quarter-Car Semi-active Suspension	411
17.6 Problems	416
References	417
