Preface	xi
Introduction	xiii
Guidelines for the Readers	xv
1. Nonsmooth Analysis	
The One-dimensional Case	1
1.1 One-sided derivatives	1
1.2 Calculus of quasidifferentials	7
1.3 The directional differentiability of a composition	10
1.4 The continuity of a quasidifferential mapping	16
1.5 Codifferentiable functions	18
1.6 The codifferentiability of a piece-wise smooth function ...	22
1.7 The k-th order codifferentiability	36
1.8 The Dini derivatives	39
1.9 The Clarke derivatives	45
References of Chapter 1	48
2. Quasidifferentiable Functions and Sets	
Quasidifferentiable Optimization	
and Optimality Conditions	49
2.1 Homogeneous approximations of sets, functions	
and mappings	49
2.1.1 Conical approximation of sets	49
2.1.2 Dini and Hadamard derivatives and their properties ..	53
2.1.3 Properties of Dini and Hadamard derivatives	57
2.1.4 Sets defined by inequalities and equations.	
Approximation and regularity conditions	59
2.2 Quasidifferentiable functions	61
2.2.1 Difference of convex compact sets	61
2.2.2 Quasidifferentiable functions.	
Quasidifferential calculus	66
2.2.3 Sets defined by quasidifferentiable functions:	
General position and regularity conditions	69

2.2.4	Star-shaped sets and quasidifferentiability	70
2.2.5	Choosing the best quasidifferential	72
2.2.6	Upper convex and lower concave approximations of functions	73
2.2.7	ϵ -quasidifferentials	74
2.3	Other definitions of generalized gradients and relations to quasidifferentials	75
2.3.1	Subdifferential in the sense of Clarke	75
2.3.2	Quasidifferential and Penot subdifferential and superdifferential	77
2.3.3	Quasidifferential and Clarke subdifferential	77
2.4	Codifferentiable functions	78
2.4.1	Definition and examples	78
2.4.2	Codifferential calculus	79
2.4.3	Continuously codifferentiable sets	80
2.4.4	Twice codifferentiable functions	81
2.5	Optimization problems and optimality conditions. Necessary and sufficient optimality conditions	83
2.5.1	Characterization of minima	83
2.6	Unconstrained minimization	85
2.6.1	Minimum of a quasidifferentiable function	85
2.6.2	Minimum of a subdifferentiable function	85
2.6.3	Minimum of a hypodifferentiable function	86
2.7	Constrained minimization	86
2.7.1	Minimum of a convex function on a convex set	86
2.7.2	Minimum of a subdifferentiable function on an arbitrary set	86
2.7.3	Minimum of a quasidifferentiable function on a quasidifferentiable set	88
2.7.4	Minimum of a hypodifferentiable function on a hypodifferentiable set	89
2.7.5	Exact penalty functions	90
	References of Chapter 2	91
3.	Nonsmooth Mechanics I.	
	Nonsmooth Modelling in Mechanics	93
3.1	Elements of mechanics. Convex superpotentials	93

3.2 Nonconvex superpotentials and nonconvex quasidifferentiable (QD)–superpotentials	102
3.3 Boundary conditions expressed via convex superpotentials	108
3.4 Boundary conditions and interface laws expressed via nonconvex QD –superpotentials	113
3.5 Material laws derived by convex superpotentials	122
3.5.1 Convex superpotentials	122
3.5.2 Nonconvex QD –superpotentials	127
3.6 Two- and three dimensional QD –superpotential laws	131
References of Chapter 3	135
 4. Nonsmooth Mechanics II.	
Variational Formulations using Quasidifferentiability .	139
4.1 The derivation of variational formulations for static problems involving QD –superpotentials	139
4.2 Adhesive contact problem in elastic bodies	147
4.3 Laminated von Kármán plates. Delamination effects	153
4.4 A QD –superpotential approach to the skin friction effect in plane elasticity	160
4.4.1 The case of linear elasticity	160
4.4.2 Extension of the theory for the case of fuzzy effects ..	164
4.5 On the combination of QD –superpotentials with convex superpotentials. Nonlinear elasticity	166
4.6 QD –superpotentials in semipermeability problems	171
References of Chapter 4	174
 5. Additional Topics.	
Stability, Economics, Flow Problems, Dynamic Problems	177
5.1 Stability of structures with quasidifferential boundary conditions	177
5.1.1 The nonlinear eigenvalue problem	177
5.1.2 Formulation of nonconvex energy minimization problem	181
5.1.3 Existence result	182
5.1.4 Application in a 3–D elasticity problem	184
5.2 Nonlinear, nonmonotone network flow problems	187

5.2.1 Formulation of the problem	187
5.2.2 Monotone subdifferential network flow problems	188
5.2.3 Nonmonotone network flow problems	189
5.3 Rigid viscoplastic flow problems in cylindrical pipes with adhesion or nonmonotone friction	190
5.4 Time-dependent QD -superpotentials and related variational formulations. Von Kármán plates and thermoelasticity	194
5.4.1 Dynamic QD -superpotentials in the theory of von Kármán plates	194
5.4.2 Dynamic QD -superpotentials in linear thermoelasticity	198
References of Chapter 5	202
 6. Nonsmooth Optimization Algorithms.	
Quasidifferentiable and Codifferentiable Optimization	205
6.1 Hypodifferentiable optimization algorithms	205
6.1.1 The method of hypodifferential descent	205
6.1.2 Finding the direction of hypodifferential descent	212
6.1.3 On the minimization of the difference of the maximum of smooth functions	215
6.1.4 Codifferential optimization algorithms	222
6.2 Optimization of difference convex (d.c.) functions	224
6.2.1 The relaxation method for minimizing d.c. functions	230
6.3 Exact penalty quasidifferentiable functions	236
6.3.1 Convex case	246
6.3.2 The nonlinear programming problem	251
References of Chapter 6	252
 7. Nonsmooth Computational Mechanics I.	
Modelling and Applications	253
7.1 Quasidifferential energy optimization in mechanics	253
7.1.1 Smooth unconstrained case	255
7.1.2 Subdifferentiable unconstrained case	256
7.1.3 Quasidifferentiable unconstrained case	256
7.1.4 Difference convex (d.c.) unconstrained case	257
7.1.5 Inequality constrained problems	258

- 7.2 Structural analysis applications 259
 - 7.2.1 A model problem for discrete structures with interfaces 260
 - 7.2.2 Linear elastic structure with subdifferential interface laws and boundary conditions 263
 - 7.2.3 Subdifferential material laws and subdifferential interface or boundary conditions 268
 - 7.2.4 Linear elastic structures with quasidifferential interface laws or boundary conditions 269
- 7.3 Nonconvex elastoplasticity 276
 - 7.3.1 Holonomic, Hencky-type elastoplasticity 278
 - 7.3.2 Convex analysis and rate elastoplasticity 283
 - 7.3.3 Nonconvex analysis and elastoplasticity 286
- References of Chapter 7 293
-
- 8. Nonsmooth Computational Mechanics II.
 - Algorithms and Examples 297
 - 8.1 Nonsmooth computational mechanics algorithms 297
 - 8.1.1 Numerical optimization and nonlinear computational mechanics 298
 - 8.1.2 Convex, nonsmooth optimization in computational mechanics 300
 - 8.1.3 Nonconvex, nonsmooth optimization in computational mechanics 304
 - 8.1.4 Incremental and path-following methods 307
 - 8.2 Numerical examples 311
 - 8.2.1 Material inclusion problem in composites 311
 - 8.2.2 Elastic, frictionless and frictional stamp problem 316
 - 8.2.3 Short cantilever resting on a unilateral support 320
 - 8.2.4 Delamination effects in layered composite beams 332
 - 8.2.5 Nonmonotone skin effects in adhesive joints 338
 - References of Chapter 8 342
