CHAPTER 1 Executive summary	1
CHAPTER 2 Introduction	7
2.1 Aim of the Book.....	10
2.2 Terms and Definitions.....	12
2.3 List of Symbols and Abbreviations	21
2.3.1 Abbreviations	21
2.3.2 Symbols.....	21
2.4 History of Dynamic Modification Devices in Tall Buildings.....	28
2.5 Industrial Application of Damping Devices.....	30
2.5.1 Vibration Control	30
2.5.2 Vibration and Seismic Control of Industrial Machine Structures	32
2.5.3 Vibration Isolation of Buildings and Rail Structures.....	34
2.5.4 Vibration Control of Large Industrial Chimney Stacks	34
CHAPTER 3 Damping considerations in tall buildings	39
3.1 Basic Principles of Building Response.....	41
3.1.1 Single Degree-of-Freedom System.....	41
3.1.2 Multiple Degrees-of-Freedom System.....	47
3.1.3 Equivalent Viscous Damping	53
3.2 Damping in Tall Buildings	55
3.2.1 Damping Modeling	55
3.2.2 Intrinsic Damping	57
3.3 Effect of Damping on Building	73
3.3.1 Other Development Considerations.....	77
3.4 Tall Buildings Wind-Excited Motion	78
3.4.1 Building Wind Vibration	79
3.4.2 Occupant Comfort.....	80
3.4.3 Wind Deflection Criteria	84
3.5 Tall Buildings Earthquake-Excited Motion.....	85
3.5.1 Principles of Performance-Based Earthquake-Resistant Design for Tall Buildings	87
3.5.2 The Role of Damping in the Seismic Response Control of Tall Buildings.....	89
3.5.3 Seismic Deflection Criteria.....	90

3.6	Environmental and Economic Considerations.....	90
3.6.1	Life-Cycle Assessment	93
3.6.2	Cost Implication of Buildings with Dissipation Devices	101
3.7	Damping Technology Uncertainty and Robustness Performance.....	102
3.8	Alternative to Damping Devices.....	103
CHAPTER 4	An introduction to dynamic modification devices...	107
4.1	Passive Damping Systems.....	108
4.1.1	Distributed Damping Approaches	109
4.1.2	Mass Damping Approaches	195
4.2	Seismic Isolation	207
4.2.1	Base-Isolation Types.....	210
4.2.2	Base-Isolation Manufactures	215
4.3	Active, Semiactive, and Hybrid Systems	217
4.3.1	Active Systems.....	222
4.3.2	Hybrid Systems	224
4.3.3	Semiactive Systems	226
4.3.4	Adaptive Tuned-Mass Damper Systems	229
4.3.5	Control Strategies.....	230
4.3.6	Future Directions.....	231
4.3.7	Active, Semiactive, and Hybrid Dampers Manufactures	232
4.4	Comparison of Dampers in Tall Buildings.....	232
CHAPTER 5	Design procedures for tall buildings with dynamic modification devices	235
5.1	Available Codes and Design Tools	236
5.1.1	Codes and Guidelines	236
5.1.2	Practical Design Aspects	248
5.1.3	Structural Analyses	251
5.2	Passive Damping Systems.....	264
5.2.1	Step-by-Step Procedure for Distributed Dampers.....	265
5.2.2	Step-by-Step Procedure for Mass Dampers	321
5.3	Isolation Systems.....	347
5.3.1	Step-by-Step Procedure for Base Isolation	347
5.4	Active, Semiactive, and Hybrid Systems	365
5.4.1	Literature Review.....	365
5.4.2	Step-by-Step Procedure.....	367
5.5	Retrofit of Existing Buildings.....	400
5.5.1	Code Requirements	400

5.5.2	Evaluation Procedures Based on ASCE 41-13 (ASCE, 2013).....	402
5.5.3	Step-by-Step Procedure.....	403
5.5.4	Case Study: Retrofitting Examples of High-Rise Building with Damping Systems.....	422
5.6	Dynamic Modification Devices Strategy Optimization	429
5.6.1	Introduction	429
5.6.2	Algorithm-Based Optimization Procedures.....	430
5.6.3	Nonalgorithm-Based Optimization Procedures.....	433
CHAPTER 6	Architectural aspects and building system interaction	437
6.1	Architectural Aspects	438
6.1.1	Distributed Damping Systems	439
6.1.2	Mass Damping Systems.....	444
6.1.3	Base Isolation Systems	447
6.2	Elevators	450
6.3	Mechanical Systems.....	455
6.3.1	Basic Considerations.....	455
6.3.2	Mechanical Floors.....	456
6.4	Façade.....	457
6.4.1	Double-Skin Façade	458
6.4.2	Diagrid Façade	460
6.4.3	Mega Brace Dampers Façade	463
CHAPTER 7	Testing, inspection, and maintenance.....	465
7.1	Codes and Standards Development	466
7.1.1	US Standards.....	466
7.1.2	Japanese Code	470
7.1.3	Chinese Code	471
7.1.4	European Standards.....	472
7.2	Preinstallation Tests and Quality Control.....	472
7.2.1	Distributed Damping Systems	473
7.2.2	Mass, Active, Semiactive, and Hybrid Damping Systems	482
7.2.3	Base Isolation Systems	486
7.2.4	Testing Examples.....	491
7.2.5	Summary	493
7.3	Commissioning and System Tuning	493
7.3.1	Distributed Damping Systems	494
7.3.2	Mass Damping Systems.....	495
7.3.3	Base Isolation Systems	500

7.4	Fatigue of Dampers	501
7.4.1	Viscous Dampers	502
7.4.2	Viscoelastic Dampers	503
7.4.3	Displacement-Dependent Dampers	504
7.4.4	Mass Damping Systems	504
7.4.5	Base Isolation Systems	505
7.5	Building Health Monitoring	505
7.5.1	Distributed Damping Systems	507
7.5.2	Mass Damping Systems	507
7.5.3	Active, Semiactive, and Hybrid Damping Systems	507
7.5.4	Base Isolation Systems	508
7.5.5	Case Study Examples	508
7.6	Ongoing Maintenance	513
7.6.1	Standard Recommendations	515
7.6.2	Distributed Damping Systems	516
7.6.3	Mass Damping Systems	516
7.6.4	Active, Semiactive, and Hybrid Damping Systems	517
7.6.5	Base Isolation Systems	518
7.7	Maintenance Cost	519
7.8	Postextreme Event Inspections	519
7.8.1	Distributed Damping Systems	521
7.8.2	Mass Damping Systems	522
7.8.3	Base Isolation Systems	523
7.9	Transportation, Installation, and Care of Works	524
7.9.1	Transportation of Damping Systems	524
7.9.2	Storage/Installation of Damping Systems	525
7.9.3	Care of Works of Damping Systems	526
7.10	Resilience-Based Earthquake Design Initiative and United States Resiliency Council Rating Systems	526
7.10.1	Resilience-Based Earthquake Design Initiative Rating System	527
7.10.2	United States Resiliency Council Rating System	529
CHAPTER 8	Case studies of tall buildings with dynamic modification devices	533
8.1	Distributed Damping Systems Case Studies	534
8.1.1	Columbia Tower, Seattle, Washington, United States	534
8.1.2	Two Union Square, Seattle, Washington, United States	547
8.1.3	St Francis Shangri La Place, Manila, Philippines	556

8.1.4	Pangu Plaza, Beijing, China	567
8.1.5	Beijing Yintai Center, Beijing, China	577
8.1.6	San Diego Central Courthouse, San Diego, California, United States.....	592
8.1.7	Wuhan Poly Cultural Plaza, Wuhan, China	615
8.1.8	TianJin International Trade Center, TianJin, China	626
8.1.9	454 Yonge, Toronto, ON, Canada.....	637
8.1.10	181 Fremont Street, San Francisco, California, United States	658
8.1.11	Atushi Building, Xin Jiang, China	668
8.1.12	Costums Residential, Auckland, New Zealand	678
8.1.13	Connor Tower, Manila, Philippines	701
8.1.14	Allianz Tower, Milan, Italy	716
8.2	Mass Damping Systems Case Studies	733
8.2.1	Citicorp Building, New York, New York City, United States	734
8.2.2	John Hancock Tower, Boston, Massachusetts, United States	745
8.2.3	Taipei 101, Taipei, Taiwan.....	758
8.2.4	One Rincon Hill (South Tower) San Francisco, California, United States.....	774
8.2.5	Comcast Center, Philadelphia, Pennsylvania, United States	783
8.2.6	Hyatt Park Tower, Chicago, Illinois, United States	788
8.2.7	Highcliff Apartments, Hong Kong	801
8.2.8	Bloomberg Tower, New York City, New York, United States	808
8.2.9	Raffles City, Chongqing, China	818
8.2.10	L-Tower, Toronto, Canada	828
8.2.11	14 York Street, Toronto, Canada.....	840
8.2.12	One Bloor Street East, Toronto, Canada	847
8.2.13	1151 West Georgia, Vancouver, Canada	854
8.2.14	Shanghai Tower, Shanghai, China	863
8.2.15	The Independent, Austin, Texas, United States	876
8.3	Base Isolation Systems Case Studies.....	888
8.3.1	Nunoa Capital Building, Santiago, Chile	888
8.4	Active, Semiactive, and Hybrid Systems Case Studies	904
8.4.1	Thyssenkrup Test Tower, Rottweil, Germany	904

CHAPTER 9	Future of dynamic modification systems	921
9.1	Improved Modeling of Structural Behavior	922
9.1.1	Improved Understanding of Actions on Structures.....	922
9.1.2	Improved Behavior Model of Materials and Devices....	923
9.1.3	Enhanced Computing Power	923
9.1.4	Improved Design Codes.....	924
9.2	Implementing Results of Technological Progress	925
9.2.1	Development of Existing Devices and New Hybrid Systems.....	925
9.2.2	New Technologies.....	926
CHAPTER 10	Tall building with dynamic modification systems trend data.....	929
10.1	Database 1 (Worldwide Buildings Over 250 m).....	930
10.1.1	General Trends for Tall Buildings.....	930
10.1.2	General Trends for Tall Buildings with Dynamic Modification Systems	930
10.1.3	Trends for Dynamic Modification System Category	937
10.1.4	Trends for Dynamic Modification System Types	941
10.2	Database 2 (US Buildings Over 200 m).....	943
10.2.1	General Trends for Tall Buildings.....	943
10.2.2	General Trends for Tall Buildings with Dynamic Modification System	945
10.2.3	Trends for Dynamic Modification System Category	947
10.2.4	Trends for Dynamic Modification System Type	948
10.3	Further Studies	948
10.3.1	Dynamic Modification System Versus Height.....	949
10.3.2	Structural Material	953
10.3.3	Structural System	958
10.3.4	Building Function	958
10.4	Summarized Data for Tall Buildings with Dynamic Modification System	961
10.5	Conclusions	961
CHAPTER 11	Conclusions.....	969
	Appendix A.....	971
	References.....	1013
	Index	1067
