Preface to the first edition ix

Preface to the second edition xi

Preface to the third edition xii

Acknowledgements xiv

List of symbols xvii

1 Introduction to probability distributions and averages 1

Probability density function 2
Gaussian distribution 7
Calculation of averages 7
Probability distribution function 10

2 Joint probability distributions, ensemble averages 12

Second-order probability functions 12
Second-order averages 14
Conditional probability 17
Second-order Gaussian distribution 18
Ensemble averaging 19

3 Correlation 21

Autocorrelation 25
Cross-correlation 29

4 Fourier analysis 33

Fourier integral 35
Complex form of the Fourier transform 38

5 Spectral density 41

Narrow band and broad band processes 44
Spectral density of a derived process 46

Cross-spectral density 48
Note on the units of spectral density 51

6 Excitation – response relations for linear systems 53

Classical approach 54
Frequency response method 55
Impulse response method 58
Relationship between the frequency response and impulse response functions 60
Calculation of response to an arbitrary input 62

7 Transmission of random vibration 67

Mean level 68
Autocorrelation 69
Spectral density 71
Mean square response 73
Cross-correlation 77
Cross-spectral density 78
Probability distributions 79

8 Statistics of narrow band processes 82

Crossing analysis 85
Distribution of peaks 90
Frequency of maxima 92

9 Accuracy of measurements 95

Analogue spectrum analysis 96
Variance of the measurement 97
Analysis of finite length records 103
Confidence limits 108

10 Digital spectral analysis I: Discrete Fourier transforms 113

Discrete Fourier transforms 114
Fourier transforms of periodic functions 116
Aliasing 118
Calculation of spectral estimates 120

11 Digital spectral analysis II: Windows and smoothing 125

Relationship between linear and circular correlation 126
Fourier transform of a train of aperiodic functions 129
Basic lag and spectral windows 131
Smoothing spectral estimates 137
Extending record length by adding zeros 139
Summary 142
Practical considerations 146

12 The fast Fourier transform 150
Basic theory 150
Sample calculation 152
Programming flow charts 155
Practical value of FFT 162
Alternative algorithms 165

13 Pseudo random processes 167
Random binary process 168
Pseudo random binary signals 172
Random multi-level process 172
Spectrum of a multi-level process 179
Generation of random numbers 183
Synthesis of correlated noise sources 185

14 Application notes 189
Response of a resonant mode to broad band excitation 189
Fatigue and failure due to random vibration 191
Excitation by random surface irregularities 196
Simulation of random environments 201
Frequency response function and coherency measurements 206
Local spectral density calculations 218
Weibull distribution of peaks 219

15 Multi-dimensional spectral analysis 225
Two-dimensional Fourier series 225
Properties of the two-dimensional DFT 229
Spectral density of a multi-dimensional random process 233
Discrete spectral density and circular correlation functions for a two-dimensional random process 239
Two-dimensional windows 245
Two-dimensional smoothing 254
Artificial generation of a two-dimensional random process 256
Generation of an isotropic surface 258
Cross-spectral density between parallel tracks across a random surface 263

16 Response of continuous linear systems to stationary random excitation 268
Response to excitation applied at a point 268
Response to distributed excitation 277
Normal mode analysis 280
Kinetic energy of a flat plate subjected to uncorrelated random excitation 290
Single degree-of-freedom analogy 292

17 Discrete wavelet analysis 295
Basic ideas 295
Dilation equations 300
Dilation wavelets 303
Properties of the wavelet coefficients 307
Circular wavelet transforms 322
Discrete wavelet transforms 326
Properties of the DWT 339
Mean-square maps 348
Convolution by wavelets 353
Two-dimensional wavelet transforms 355
Harmonic wavelets 359
Discrete harmonic wavelet transform 364
Concluding comments 370

Appendices

Appendix 1 Table of integrals 371
Appendix 2 Computer programs 373
Appendix 3 The Gaussian probability integral 379
Appendix 4 Distribution of χ^2_κ 381
Appendix 5 Random numbers 383
Appendix 6 Distribution of reverse arrangements for a random series 385
Appendix 7 Wavelet programs 387

Problems 401

Answers to problems 457
