Preface.....xi

Acknowledgment..... xiii

About the Authors.....xiv

Introduction..... 1

Overview of Neural Networks in Civil Engineering7

 2.1 Introduction7

 2.2 Construction Engineering.....9

 2.2.1 Construction Scheduling and Management9

 2.2.2 Construction Cost Estimation 10

 2.2.3 Resource Allocation and Scheduling 11

 2.2.4 Construction Litigation 12

 2.2.5 Other Applications of BP and Other Neural
 Network Models in Construction Engineering and
 Management..... 12

 2.3 Structural Engineering..... 13

2.3.1	Pattern Recognition and Machine Learning in Structural Analysis and Design	13
2.3.2	Design Automation and Optimization	19
2.3.3	Structural System Identification.....	23
2.3.4	Structural Condition Assessment and Monitoring	23
2.3.5	Structural Control.....	26
2.3.6	Finite Element Mesh Generation	27
2.3.7	Structural Material Characterization and Modeling.....	28
2.3.8	Parallel Neural Network Algorithms for Large- Scale Problems	29
2.4	Environmental and Water Resources Engineering.....	30
2.5	Traffic Engineering	32
2.6	Highway Engineering.....	34
2.7	Geotechnical Engineering	35
2.8	Shortcomings of the BP Algorithm and Other Recent Approaches.....	36
2.8.1	Shortcomings of the BP Algorithm.....	36
2.8.2	Adaptive Conjugate Gradient Neural Network Algorithm	37
2.8.3	Radial Basis Function Neural Networks	37
2.8.4	Other Approaches	38
2.9	Integrating Neural Network With Other Computing Paradigms	39
2.9.1	Genetic Algorithms	39
2.9.2	Fuzzy Logic.....	40

2.9.3 Wavelets.....	42
Neural Dynamics Model and its Application to Engineering	
Design Optimization	45
3.1 Introduction	45
3.2 Cold-Formed Steel Design Optimization.....	46
3.3 Minimum Weight Design of Cold-Formed Steel Beams	47
3.3.1 Bending Strength Constraint.....	50
3.3.2 Shear Strength Constraint	55
3.3.3 Constraint on Combined Bending and Shear Strength	55
3.3.4 Constraint on Web Crippling Strength.....	56
3.3.5 Constraint on Combined Web Crippling and Bending Strength.....	57
3.3.6 Deflection Constraint	57
3.3.7 Constraint on Flange Curling.....	58
3.3.8 Local Buckling Constraints.....	59
3.4 Neural Dynamics Optimization Model	60
3.5 Neural Dynamics Model for Optimization of Cold- Formed Steel Beams.....	64
3.6 Application of the Model	69
3.6.1 Example 1	70
Example 2	73
Example 3	76
3.7 Global Optimum Design Curves for Hat-Shaped Beams	79

3.7.1	Parametric Studies and Search for Global Optima	80
3.7.2	Design Curves for Hat-Shapes	83
3.8	Concluding Remarks	92
Project Planning and Management and CPM		95
4.1	Introduction	95
4.2	What is a Project?.....	98
4.2.1	Definition	98
4.2.2	Life Cycle.....	100
4.2.3	Participants.....	102
4.2.4	Attributes of a Project	103
4.2.5	States of a Project.....	104
4.2.6	Project Time and Cost.....	105
4.3	Project Planning and Management.....	107
4.3.1	Introduction.....	107
4.3.2	Component Models	108
4.4	Elements of Project Scheduling	111
4.4.1	Tasks	112
4.4.2	Work Breakdown Structure	113
4.4.3	Scheduling Constraints	117
4.5	Graphical Display of Schedules	119
4.5.1	The Need.....	119
4.5.2	Gantt Charts	120
4.5.3	Network Diagrams	121
4.5.4	Linear Planning Chart	124
The Critical Path Method.....		126

4.6.1 Introduction 126

4.6.2 Features 128

4.6.3 Parameter in the CPM Analysis 129

4.6.4 Algorithm 131

4.6.5 Example 134

A General Mathematical Formulation for Project

Scheduling and Cost Optimization..... 139

5.1 Introduction 139

5.2 Cost-Duration Relationship of a Project 143

5.3 Formulation of the Scheduling Optimization Problem 145

5.3.1 Breakdown the Work into Tasks, Crews, and
Segments 147

5.3.2 Specify the Internal Logic of Repetitive Tasks..... 147

5.3.3 Specify the External Logic of Repetitive and Non-
Repetitive Tasks 149

5.4 Conclusion..... 153

Neural Dynamics Cost Optimization Model for

Construction Projects 155

6.1 Introduction 155

6.2 Formulation of the Neural Dynamics Construction
Cost Optimization Model 155

6.3 Topological Characteristics..... 159

6.4 Illustrative Example 163

6.4.1 General Description 163

6.4.2 Cost-Duration Relationship..... 165

6.4.3	Scheduling Logic	165
6.4.4	Solution of the Problem	172
6.5	Conclusion.....	174
Object-Oriented Information Model for Construction		
Project Management.....		177
7.1	Introduction	177
7.2	Change Order Management	178
7.3	Owner's Role in Construction Project Management.....	179
7.4	Object-Oriented Methodology and Construction Engineering	181
7.5	An Object-Based Information Model for Construction Scheduling, Cost Optimization, and Change Order Management	185
7.6	Software Reuse Techniques: Components, Design Patterns, and Frameworks	186
7.7	Development Environment	192
7.8	An Application Architecture for the Construction Domain	196
7.9	Brief Description of Classes in Figure 7.6	201
The CONSCOM Framework.....		205
8.1	Introduction	205
8.2	The CONSCOM Framework	206
8.2.1	Introduction.....	206
8.2.2	Object Model.....	208
8.2.3	Model Description.....	211

8.3	Conclusion.....	227
8.4	Brief Description of Classes in the CONSCOM Framework (Figures 8.1–8.9).....	229
8.5	Brief Description of the Attributes and Operations Shown in Figures 8.3–8.9.....	232
8.5.1	Attributes.....	232
8.5.2	Operations	233
A New Generation Software for Construction Scheduling and Management.....		237
9.1	Introduction	237
9.2	Integrated Construction Scheduling and Cost Management	237
9.3	Features of CONSCOM	239
9.4	Integrated Management Environment	241
9.5	User Interface Characteristics	244
9.6	Example – Retaining Wall Project	254
9.7	Concluding Remarks	259
Regularization Neural Network Model for Construction Cost Estimation		261
10.1	Introduction	261
10.2	Estimation, Learning and Noisy Curve Fitting	263
10.3	Regularization Networks.....	268
10.4	Determination of Weights of Regularization Network	272
10.5	Proper Generalization and Estimation by Cross- Validation	274

10.6 Input and Output Normalization276

10.7 Application279

 10.7.1 Example 1280

 10.7.2 Example 2284

10.8 Conclusion.....284
