

TABLE OF CONTENTS

Chapter 1	Introduction to Nonlinear Mechanics	1
1.1	Introduction	1
1.2	The Theory of Elastica	1
1.3	Methods Often Used for the Solution of the Elastica	5
1.4	Historical Aspects of the Large Deformation Problem	5
1.5	Pseudolinear Equivalent Systems	9
1.6	Simplified Nonlinear Equivalent Systems	13
1.7	Dependence of Loading and Stiffness on the Geometry of the Deformation	14
1.8	Tapered Cantilever Beam Loaded with a Concentrated Load P at the Free End	18
1.8.1	Using a Simplified Nonlinear Equivalent System	23
1.9	Alternate Approach Regarding the Derivation of Equivalent Simplified Nonlinear Systems of Constant Stiffness	26
	Problems	29
Chapter 2	Flexible Bars of Uniform and Variable Thickness	31
2.1	Introduction	31
2.2	Uniform Flexible Cantilever Beams Subjected to Distributed and Combined Loadings	31
2.3	Uniform Cantilever Beams Subjected to Arbitrary Loading Conditions	37
2.4	Variable Thickness Cantilever Beam Loaded with a Uniformly Distributed Loading	42
2.5	Variable Thickness Cantilever Beam Subjected to Combined Loadings	45
2.6	Flexible Cantilever Beam Loaded with a Partially Distributed Load and a Concentrated Load at the Free End	49
2.6.1	Simplified Nonlinear Equivalent System of Constant Stiffness	53
2.7	Tapered Flexible Cantilever Beam Subjected to a Trapezoidal Loading	54
2.8	Uniform Simply Supported Beam Subjected to a Concentrated Load P	58
2.9	Uniform Simply Supported Beams Loaded with a Uniformly Distributed Loading	62
2.10	Tapered Simply Supported Beams Loaded with a Uniformly Distributed Loading	63

2.11	Equivalent Simplified Nonlinear Systems of Constant Stiffness for Simply Supported Beams	67
2.12	Tapered Simply Supported Beams Loaded with a Trapezoidal Loading	70
2.12.1	Equivalent Simplified Nonlinear Systems of Constant Stiffness	73
	Problems	74
Chapter 3	Statically Indeterminate Flexible Bars of Uniform and Variable Thickness	81
3.1	Introduction	81
3.2	Solution Methodology	81
3.3	Uniform Single Span Beams Subjected to Distributed Loadings	85
3.4	Variable Thickness Single Span Beams Subjected to Trapezoidal Loadings	86
3.5	Simplified Nonlinear Equivalent Systems for Statically Indeterminate Flexible Beams	93
3.6	Variable Thickness Beams Subjected to Combined Loading Conditions	96
	Problems	108
Chapter 4	Vibration Theory of Flexible Bars	111
4.1	Introduction	111
4.2	The Nonlinear Differential Equation of Motion	111
4.3	Differential Equation of Motion for Small Amplitude Vibration	114
4.4	Galerkin's Finite Element Method	119
4.5	Vibration of Uniform Flexible Cantilever Beams by Using an Equivalent Straight Beam and Galerkin's Finite Element Method	124
4.6	Effect of Mass Position Change During Large Deformation	129
4.7	Galerkin's Consistent Finite Element Method	135
4.8	Vibration of Uniform Flexible Cantilever Beams by Using Galerkin's Consistent FEM	140
	Problems	144
Chapter 5	Vibration Analysis of Flexible Bars	147
5.1	Introduction	147
5.2	Vibration of Uniform Flexible Simply Supported Beams Using Galerkin's Consistent FEM	147
5.3	Vibration of Tapered Flexible Simply Supported Beams Using Galerkin's Consistent FEM	151

5.4	Vibration of Tapered Flexible Simply Supported Beams Using Galerkin's FEM with Equivalent Uniform Stiffness and Mass	156
5.5	Vibration of Flexible Bars with Piecewise Thickness Variation and Piecewise Uniform Weight	158
5.6	Additional Discussion and Remarks	165
	Problems	167
Chapter 6 Inelastic Analysis of Uniform and Variable Thickness Members		
6.1	Introduction	171
6.2	Equivalent Systems for Inelastic Analysis	171
6.3	Inelastic Analysis of Prismatic and Nonprismatic Cantilever Beams	176
6.4	Inelastic Analysis Using a Three-Line and a Six-Line Stress/Strain Curve Approximation.....	182
6.5	Inelastic Analysis of Uniform Simply Supported Beams	188
6.6	Inelastic Analysis of Variable Thickness Simply Supported Beams	191
6.7	Inelastic Analysis of Uniform and Variable Thickness Statically Indeterminate Beams	195
	Problems	203
Chapter 7 Inelastic Analysis of Uniform and Variable Stiffness Members with Axial Restraints		
7.1	Introduction	207
7.2	Equivalent Systems for Inelastic Analysis of Members with Axial Restraints	207
7.3	Inelastic Analysis of Nonprismatic Simply Supported Beams with Axial Compressive Loads	212
7.4	Elastic and Inelastic Analysis of Prismatic Beams Hinged at Both Ends	218
7.5	Elastic and Inelastic Analysis of Prismatic Beams Fixed at Both Ends	225
	Problems	230
Chapter 8 Elastic and Inelastic Analysis of Uniform and Variable Thickness Plates		
8.1	Introduction and Historical Developments	233
8.2	Equivalent Systems for Elastic Analysis of Plates of Variable Thickness	234
8.2.1	Rectangular Plates of Variable Thickness	234
8.2.2	Symmetrical Circular Plates	241

8.3	Equivalent Systems for Rectangular Plates with Quadratic Thickness Variation	245
8.4	Equivalent Systems for Rectangular Plates with Linear Thickness Variation	248
8.5	Elastic Analysis of Simply Supported Rectangular Plates with Quadratic Thickness Variation	249
8.6	Elastic Analysis of Simply Supported Rectangular Plates with Linear Thickness Variation	255
8.7	Elastic Analysis of Rectangular Plates with Other Types of Boundary Conditions	260
8.8	Inelastic Analysis of Thin Plates of Uniform and Variable Thickness	274
	8.8.1 Rectangular Plates	281
	8.8.2 Circular Plates	289
8.9	Inelastic Analysis of Simply Supported Rectangular Plates with Linear, Quadratic, and Uniform Thickness Variations	290
8.10	Inelastic Analysis of Clamped Circular Plates of Quadratic Thickness Variation	298
	Problems	301

Chapter 9	Inelastic Analysis of Flexible Bars with Uniform and Variable Stiffness	305
9.1	Introduction	305
9.2	Equivalent Systems for Inelastic Analysis of Flexible Bars	305
	9.2.1 Equivalent Pseudolinear Systems of Constant Stiffness	307
9.3	Inelastic Analysis of Flexible Bars by Using Equivalent Pseudolinear Systems	309
9.4	Inelastic Analysis of Flexible Bars by Using Simplified Nonlinear Equivalent Systems	315
9.5	Inelastic Analysis of a Prismatic Cantilever Beam with Concentrated Load at the Free End	317
9.6	Inelastic Analysis of Nonprismatic Flexible Cantilever Beams Loaded with a Concentrated Load at the Free End	328
9.7	Inelastic Analysis of Nonprismatic Flexible Cantilever Beams Subjected to a Uniformly Distributed Loading	329
9.8	Inelastic Analysis of Tapered Simply Supported Beams	336
9.9	Inelastic Analysis of Flexible Tapered Simply Supported Beams by Using Simplified Nonlinear Equivalent Systems	340

9.10 Inelastic Analysis of Flexible Bars with Elaborate Loading Conditions and Stiffness Variations	343
9.11 Some Interesting Remarks Regarding the Effects of the Axial Component of the Vertical Load	353
Problems	354
 Chapter 10 Inelastic Analysis of Variable Stiffness Flexible Bars with Axial Restraints	359
10.1 Introduction	359
10.2 Inelastic Analysis of Flexible Cantilever Bars by Including the Effect of the Axial Components of Loading	359
10.3 Inelastic Analysis of Variable Thickness Flexible Cantilever Beams Loaded with Transversed and Axial Compressive Loads at the Free End	367
10.4 Inelastic Analysis of Flexible Nonprismatic Simply Supported Beams with Vertical Loads and Axial Compressive Forces at the End Supports	371
10.5 General Discussion and Remarks	378
Problems	381
 Chapter 11 Hysteretic Models and Analysis of Uniform and Variable Stiffness Members Under Cyclic Loading	383
11.1 Introduction and Background Information	383
11.2 Theoretical Formulation of the Problem	384
11.3 Utilization of Equivalent Systems to Simplify the Solution	393
11.4 Application of the Theory to Structural Problems	398
11.5 Nonprismatic Cantilever Beams Subjected to Sinusoidal Dynamic Loading	401
11.6 Nonprismatic Simply Supported Beams Subjected to Sinusoidal Dynamic Loadings	408
Problems	410
 Chapter 12 Nonlinear Vibration and Instabilities of Elastically Supported Beams	413
12.1 Introduction	413
12.2 Uniform Beams Supported by a Vertical Spring at Each End and Subjected to Axial Compressive Loads	413
12.3 Uniform Beams Supported by Vertical and Horizontal Springs at the Ends and Subjected to Axial and Vertical Restraints	423
12.3.1 Static Deflection and End Force in Spring k_h	429

12.4 Vibration Analysis of the Member in Figure 12.6	430
12.5 Applications	438
12.6 How A Natural Frequency is Affected with Increasing Vibration Amplitude	444
Problems	448
References	453
Index	457
