Contents

1 INTRODUCTION, MATERIALS, AND PROPERTIES 1

1.1 Reinforced Concrete Structures **1.2** Historical Background **1.3** Concrete **1.4** Cement **1.5** Aggregates **1.6** Admixtures **1.7** Compressive Strength **1.8** Tensile Strength **1.9** Modulus of Elasticity **1.10** Creep and Shrinkage **1.11** Concrete Quality Control **1.12** Steel Reinforcement **1.13** SI Units Selected References

2 DESIGN METHODS AND REQUIREMENTS 31

2.1 ACI Building Code **2.2** Strength Design and Working Stress Design Methods **2.3** Working Stress Method **2.4** Strength Design Method **2.5** Comments on Design Methods **2.6** Safety Provisions **2.7** Overload Provisions for Various Load Combinations **2.8** Handbooks and Computer Software **2.9** Dimensions and Tolerances **2.10** Accuracy of Computations Selected References

3 STRENGTH OF RECTANGULAR SECTIONS IN BENDING 43

3.1 General Introduction **3.2** Basis of Nominal Flexural Strength **3.3** Whitney Rectangular Stress Distribution **3.4** Investigation of Rectangular Sections in Bending with Tension Reinforcement Only **3.5** Definition of Balanced Strain Condition **3.6** Maximum Reinforcement Ratio ρ **3.7** Minimum Reinforcement Ratio ρ **3.8** Design of Rectangular Sections in Bending with Tension Reinforcement Only **3.9** Practical Selection for Beam Sizes, Bar Sizes, and Bar Placement **3.10** Investigation of Rectangular Sections in Bending with Both Tension and Compression Reinforcement **3.11** Criterion for the Compression Steel Yield Condition **3.12** Design of Rectangular Sections in Bending with Both Tension and Compression Reinforcement **3.13** Non-Rectangular Beams Selected References Problems

4 RECTANGULAR SECTIONS IN BENDING UNDER SERVICE LOAD CONDITIONS 99

4.1 General Introduction **4.2** Fundamental Assumptions **4.3** Modulus of Elasticity Ratio n **4.4** Equilibrium Conditions **4.5** Method of Transformed Section **4.6** Investigation of Rectangular Sections in Bending with Tension Reinforcement Only **4.7** Design of Rectangular Sections in Bending with Tension Reinforcement Only **4.8** Design of Rectangular Sections in Bending with Both Tension and Compression Reinforcement **4.9** Investigation of Rectangular Sections in Bending with Both Tension and Compression Reinforcement **4.10** Serviceability—Deflections **4.11** Serviceability—Flexural Crack Control for Beams and One-Way Slabs **4.12** Serviceability—Side Face Crack Control for Large Beams Selected References Problems

5 SHEAR STRENGTH AND SHEAR REINFORCEMENT 136

5.1 Introduction **5.2** The Shear Stress Formula Based on Linear Stress Distribution **5.3** The Combined Stress Formula **5.4** Behavior of Beams Without Shear Reinforcement **5.5** Shear Strength of Beams Without Shear Reinforcement—ACI Code **5.6** Function of Shear Reinforcement **5.7** Truss Model for Reinforced Concrete Beam **5.8** Shear Strength of Beams with Shear Reinforcement—ACI Code **5.9** Lower and Upper Limits for Amount of Shear

Reinforcement **5.10** Critical Section for Nominal Shear Strength Calculation **5.11** ACI Code Provisions for Shear Strength of Beams **5.12** Working Stress Method—ACI Code, Appendix A **5.13** Shear Strength of Beams—Design Examples **5.14** Shear Strength of Members Under Combined Bending and Axial Load **5.15** Deep Beams **5.16** Shear-Friction **5.17** Brackets and Corbels Selected References Problems

6 DEVELOPMENT OF REINFORCEMENT 223

6.1 General **6.2** Development Length **6.3** Flexural Bond **6.4** Failure Modes from Inadequate Development of Reinforcement **6.5** Reasons for Not Using Localized Surface Stress in Strength Design **6.6** Moment Capacity Diagram—Bar Bends and Cutoffs **6.7** Development Length for Tension Reinforcement—ACI Code **6.8** Second-Level Modifications to First-Level Development Length **6.9** Development Length for Compression Reinforcement **6.10** Development Length for Bundled Bars **6.11** Development Length for a Tension Bar Terminating in a Standard Hook **6.12** Bar Cutoffs in Negative Moment Region of Continuous Beams **6.13** Bar Cutoffs in Positive Moment Region of Continuous Beams **6.14** Bar Cutoffs in Uniformly Loaded Cantilever Beams **6.15** Development of Reinforcement at Simple Supports and at Points of Inflection **6.16** Development of Shear Reinforcement **6.17** Tension Lap Splices **6.18** Welded Tension Splices and Mechanical Connections **6.19** Compression Lap Splices **6.20** Compression End Bearing Connections, Welded Splices, and Mechanical Connections **6.21** Splices for Members Under Compression and Bending **6.22** Design Examples Selected References Problems

7 CONTINUITY IN BUILDING FRAMES OF REINFORCED CONCRETE 291

7.1 Common Building Frames **7.2** Positions of Live Load for Moment Envelope **7.3** Method of Analysis **7.4** ACI Moment Coefficients **7.5** ACI Moment Diagrams **7.6** Shear Envelope for Design Selected References Problems

8 DESIGN OF ONE-WAY SLABS 311

8.1 Definition **8.2** Design Methods **8.3** Thickness of Slab **8.4** Choice of Reinforcement **8.5** Continuity Analysis **8.6** Shrinkage and Temperature Reinforcement **8.7** Bar Details Selected References Problems

9 T-SECTIONS IN BENDING 327

9.1 General **9.2** Comparison of Rectangular and T-Sections **9.3** Effective Flange Width **9.4** Investigation of T-Sections in Bending—Strength Method **9.5** Maximum Tension Reinforcement Permitted in T-Sections **9.6** Design of T-Sections in Bending—Strength Method **9.7** Investigation of T-Sections in Bending—Working Stress Method Selected References Problems

10 CONTINUOUS SLAB-BEAM-GIRDER AND CONCRETE JOIST FLOOR SYSTEMS 344

10.1 Introduction **10.2** Size of Beam Web **10.3** Continuous Frame Analysis for Beams **10.4** Choice of Longitudinal Reinforcement in Beams **10.5** Shear Reinforcement in Beams **10.6** Details of Bars in Beams **10.7** Size of Girder Web **10.8** Continuous Frame Analysis for Girders **10.9** Choice of Longitudinal Reinforcement in Girders **10.10** One-Way Joist Floor Construction **10.11** Design of Concrete Joist Floors **10.12** Redistribution of Moments—Introduction to Limit Analysis Selected References Problems

11 MONOLITHIC BEAM-TO-COLUMN JOINTS 401

11.1 Monolithic Joints **11.2** Forces Acting on a Joint **11.3** Compression Through a Joint **11.4** Shear Through a Joint **11.5** Design Examples Selected References Problems

12 CANTILEVER RETAINING WALLS 418

12.1 Types of Retaining Structures **12.2** Forces on Retaining Walls **12.3** Stability Requirements **12.4** Preliminary Proportioning of Cantilever Walls **12.5** Design Example—Cantilever Retaining Wall Selected References Problems

13 MEMBERS IN COMPRESSION AND BENDING 447

13.1 Introduction **13.2** Types of Columns **13.3** Behavior of Axially Loaded Columns **13.4** Safety Provisions **13.5** Concentrically Loaded Short Columns **13.6** Strength Interaction Diagram **13.7** Length Effects **13.8** Lateral Ties **13.9** Spiral Reinforcement and Longitudinal Bar Placement **13.10** Limits on Percentage of Reinforcement **13.11** Maximum Strength in Axial Compression—ACI Code **13.12** Balanced Strain Condition—Rectangular Sections **13.13** Investigation of Strength in Compression Controls Region—Rectangular Sections **13.14** Investigation of Strength in Tension Controls Region—Rectangular Sections **13.15** Design for Strength—Region I, Minimum Eccentricity **13.16** Design for Strength—Region II, Compression Controls ($e_{min} < e < e_b$) **13.17** Design for Strength—Region III, Tension Controls ($e > e_b$) **13.18** Circular Sections as Compression Members with Bending **13.19** Axial Tension and Bending Moment **13.20** Working Stress Method **13.21** Biaxial Bending and Compression Selected References Problems

14 DEFLECTIONS 541

14.1 Deflections—General **14.2** Deflections for Elastic Sections **14.3** Modulus of Elasticity **14.4** Moment of Inertia **14.5** Instantaneous Deflections in Design **14.6** Creep Effect on Deflections under Sustained Load **14.7** Shrinkage Effect on Deflections under Sustained Load **14.8** Creep and Shrinkage Deflection—ACI Code Method **14.9** Creep and Shrinkage Deflection—Alternate Procedures **14.10** ACI Minimum Depth of Flexural Members **14.11** Span-to-Depth Ratio to Account for Cracking and Sustained Load Effects **14.12** ACI Code Deflection Provisions—Beam Examples Selected References Problems

15 LENGTH EFFECTS ON COLUMNS 593

15.1 General **15.2** Buckling of Concentrically Loaded Columns **15.3** Equivalent Pin-End Lengths **15.4** Moment Magnification—Simplified Treatment for Members in Single Curvature Without End Translation (i.e., No Sidesway) **15.5** Moment Magnification—Members Subject to End Moments Only; No Joint Translation **15.6** Members With Sidesway Possible—Unbraced Frames **15.7** Interaction Diagrams—Effect of Slenderness **15.8** ACI Code—General Analysis Method **15.9** ACI Code—Moment Magnifier Method for Braced Frames **15.10** ACI Code—Moment Magnifier Method for Unbraced Frames **15.11** Alignment Charts for Effective Length Factor k **15.12** MacGregor-Hage Moment Magnifier Method **15.13** MacGregor-Hage Amplified Lateral Load Method **15.14** Furlong's Rational Method for Unbraced Frames **15.15** Minimum Eccentricity in Design **15.16** Biaxial Bending and Axial Compression **15.17** ACI Code—Slenderness Ratio Limitations **15.18** Restraining Effect of Beams **15.19** Examples Selected References Problems

16 DESIGN OF TWO-WAY FLOOR SYSTEMS 661

16.1 General Description **16.2** General Design Concept of ACI Code **16.3** Total Factored Static Moment **16.4** Ratio of Flexural Stiffnesses of Longitudinal Beam to Slab **16.5** Minimum Slab Thickness for Deflection Control **16.6** Nominal Requirements for Slab Thickness and Size of Edge Beams, Column Capital, and Drop Panel **16.7** Limitations of Direct Design Method **16.8** Direct Design Method—Longitudinal Distribution of Moments **16.9** Direct Design Method—Effect of Pattern Loadings on Positive Moment **16.10** Direct Design Method—Procedure for Computation of Longitudinal Moments **16.11** Torsion Constant C of the Transverse Beam **16.12** Transverse Distribution of Longitudinal Moment **16.13** Design of Slab Thickness and Reinforcement **16.14** Beam (If Used) Size Requirement in Flexure and Shear **16.15** Shear Strength in Two-Way Floor Systems **16.16** Shear Reinforcement in Flat Plate Floors **16.17** Direct Design Method—Moments in Columns **16.18** Transfer of Moment and Shear at Junction of Slab and Column **16.19** Openings and Corner Connections in Flat Slabs **16.20** Equivalent Frame Method for Gravity and Lateral Load Analysis Selected References Problems

17 EQUIVALENT FRAME ANALYSIS OF TWO-WAY FLOOR SYSTEMS IN UNBRACED FRAMES 772

17.1 General Introduction **17.2** Analytical Models for Elastic Frame Analysis **17.3** Treatment of Model 1 as a Plane Frame **17.4** Reduced Stiffness Matrix and Reduced Fixed-End Moments for a Flexural Element with Rotational Springs

at Ends **17.5** The ACI Equivalent Column **17.6** Equivalent Column Method (Model 1A) vs Equivalent Beam Method (Model 1B) **17.7** Treatment of Model 1 as a Space Frame **17.8** Model 2 with Torsion Element Connecting Column Strip to Middle Strip **17.9** Concluding Remarks Selected References

18 YIELD LINE THEORY OF SLABS 797

18.1 Introduction **18.2** General Concept **18.3** Fundamental Assumptions **18.4** Methods of Analysis **18.5** Yield Line Analysis of One-Way Slabs **18.6** Work Done by Yield Line Moments in Rigid Body Rotation of Slab Segment **18.7** Nodal Force at Intersection of Yield Line with Free Edge **18.8** Nodal Forces at Intersection of Three Yield Lines **18.9** Yield Line Analysis of Rectangular Two-Way Slabs **18.10** Corner Effects in Rectangular Slabs **18.11** Application of Yield Line Analysis to Special Cases Selected References Problems

19 TORSION 829

19.1 General **19.2** Torsional Stress in Homogeneous Sections **19.3** Torsional Stiffness of Homogeneous Sections **19.4** Effects of Torsional Stiffness on Compatibility Torsion **19.5** Cracking Strength of Plain Concrete Rectangular Sections in Torsion—Skew Bending Theory **19.6** Strength of Reinforced Concrete Rectangular Sections in Torsion—Skew Bending Theory **19.7** Strength of Reinforced Concrete Rectangular Sections in Torsion—Space Truss Analogy **19.8** Strength of Sections in Combined Bending and Torsion **19.9** Strength of Sections in Combined Shear and Torsion **19.10** Strength Interaction Surface for Combined Bending, Shear, and Torsion **19.11** Torsional Strength of Concrete and Hoop Reinforcement—ACI Code **19.12** Provisions for Combined Torsion with Shear or Bending—ACI Code **19.13** Minimum Requirements for Torsional Reinforcement—ACI Code **19.14** Examples Selected References Problems

20 FOOTINGS 886

20.1 Purpose of Footings **20.2** Bearing Capacity of Soil **20.3** Types of Footings **20.4** Types of Failure of Footings **20.5** Shear Strength of Footings **20.6** Moment Strength of Footings and Development of Reinforcement **20.7** Proportioning Footing Areas for Equal Settlement **20.8** Investigation of Square Spread Footings **20.9** Design of Square Spread Footings **20.10** Design of Rectangular Footings **20.11** Design of Plain and Reinforced Concrete Wall Footings **20.12** Combined Footings **20.13** Design of Combined Footings **20.14** Pile Footings Selected References Problems

21 INTRODUCTION TO PRESTRESSED CONCRETE 935

21.1 Prestress **21.2** Historical Background **21.3** Advantages and Disadvantages of Prestressed Concrete Construction **21.4** Pretensioned and Posttensioned Beam Behavior **21.5** Service Load Stresses on Flexural Members—Tendons Having Varying Amounts of Eccentricity **21.6** Three Basic Concepts of Prestressed Concrete **21.7** Loss of Prestress **21.8** Strength of Flexural Members—ACI Code **21.9** Cracking Moment **21.10** Shear Strength of Members Without Shear Reinforcement **21.11** Shear Reinforcement for Prestressed Concrete Beams **21.12** Development of Reinforcement **21.13** Proportioning of Cross Sections for Flexure When No Tension Is Permitted **21.14** Additional Topics Selected References Problems

22 COMPOSITE CONSTRUCTION 994

22.1 Introduction **22.2** Composite Action **22.3** Advantages and Disadvantages of Composite Construction **22.4** Effective Slab Width **22.5** Computation of Section Properties **22.6** Working Stresses With and Without Shoring **22.7** Strength of Composite Sections **22.8** Shear Connection **22.9** Deflections **22.10** Slab on Precast Reinforced Concrete Beam—Strength Design **22.11** Slab on Steel Beam **22.12** Composite Columns Selected References Problems
