Foreword	vii	
Acknowledgments	x	
About the Author	xi	
CHAPTER 1	Structural Modeling Techniques and Guidelines	1
<hr/>		
Geometry Modeling		4
Load Path Considerations		7
Diaphragm Modeling		13
Rigid Diaphragm		13
Flexible Diaphragm		15
“Real” Diaphragm		15
Torsion		22
Member Releases and Supports		25
CHAPTER 2	Gravity Loads and Application	29
<hr/>		
Load Items		29
Selfweight		29
Nodal Load		30
Member Load		31
Uniform Force		31
Varying Load		32
Area Load/Floor Load		34
Example—One-Way Distribution		35

Live Load Reduction	38
Example—Live Load Reduction	39
Snow Loads	41
Example—Mono-Slope Roof	42
Example—Gable Roof	45
CHAPTER 3 Wind Loads and Application	50
Gust Effect Factor	50
Example—Frequency Determination for Building	50
Open Structures	53
Example—Tower Wind Load Generation	53
Enclosed Structures	59
Example—Building Wind Load Generation	61
CHAPTER 4 Seismic Loads and Application	66
Equivalent Lateral Force Procedure	66
Example—Base Shear ELFP	68
Reference Loads	75
Torsion and Accidental Torsion	79
Modal Response Spectrum Analysis	83
Example—Base Shear Modal Response Spectrum Analysis	83
Linear Seismic Response History Analysis	87
Example—Base Shear Time History	87
CHAPTER 5 Loads and Load Combinations	93
Organization of Load Cases	93
Example—Load Cases and Combinations	94
Load Combinations and Repeat Loads	95
Reference Loads	98
Seismic Load Combinations and the Overstrength Factor	100
Load Combination Generator	103
Example—Load Combination Generator	105

CHAPTER 6	Stability Analysis and Design	110
<hr/>		
AISC Specification		110
Example—Calculation of Notional Loads		113
Example—Calculation of Notional Loads Using STAAD.Pro		114
First-Order Analysis Method		118
Example—First-Order Analysis Method		118
Equivalent Length Method		120
Direct Analysis Method		121
Example—Direct Analysis Method		122
Providing Member Stability		126
Example—Column Stability Evaluation		128
CHAPTER 7	Steel Member Design	130
<hr/>		
Tension Members		130
Example—Single Angle in Tension		131
Verify Results Using STAAD.Pro		132
Compression Members		133
Example—W14 Column Evaluation		134
Verify Results Using STAAD.Pro		135
Example—W30 Column Torsional Buckling Evaluation		136
Verify Results Using STAAD.Pro		137
Flexural Members		138
Example—W21 Beam Flexure Evaluation		139
Verify Results Using STAAD.Pro		140
Shear Members		141
Example—W18 Beam Shear Evaluation		141
Verify Results Using STAAD.Pro		142
Members Designed for Combined Forces and Torsion		143
Example—W12 Collector Beam Evaluation		143
Steel Connections		145
Example—Extended End Plate		147
Example—Beam-Column and Base Plate		151

CHAPTER 8	Steel Structures	156
<hr/>		
Design Criteria		157
Geometry Modeling		159
Load Cases		172
Load Combination		173
Steel Design		174
AISC 360-05 Parameters		176
Analysis Results		178
CHAPTER 9	Foundation Design	182
<hr/>		
Isolated Spread Footings		182
Example—Spread Footing Design		183
Combined Footings		188
Pile Caps		190
Mat Foundation		192
Example—Mat Foundation Design		199
CHAPTER 10	Concrete Member Design	209
<hr/>		
Design of Concrete Members for Bending		210
Example—Beam Design		211
Design of Concrete Members for Compression		216
Example—Column Design		217
Designing Concrete Slabs		221
Example—Slab Design		222
Design of Concrete Shear Walls		225
Example—Shear Wall Design		226
Checking Composite Slabs for Floor Vibration		231
Example—Floor Vibration Analysis		231

CHAPTER 11	Concrete Structures	235
<hr/>		
ACI Specification		235
Structure Foundation Integration		236
Concrete Moment Frame		237
Design Criteria		238
Load Cases		239
Load Combinations		239
Concrete Design Parameters		240
PDELTA Analysis Formats		244
Member Design		246
Beam Design Brief		248
Column Design Brief		250
Slab Design Brief		252
Index		263
