CHAPTER 1 *Introduction*

1.1	What and How?	2
1.2	Physical Origins and Rate Equations	3
1.2.1	Conduction	3
1.2.2	Convection	5
1.2.3	Radiation	8
1.2.4	Relationship to Thermodynamics	12
1.3	The Conservation of Energy Requirement	12
1.3.1	Conservation of Energy for a Control Volume	12
1.3.2	The Surface Energy Balance	19
1.3.3	Application of the Conservation Laws: Methodology	21
1.4	Analysis of Heat Transfer Problems: Methodology	22
1.5	Relevance of Heat Transfer	25
1.6	Units and Dimensions	25
1.7	Summary	28
	Problems	30

CHAPTER 2 *Introduction to Conduction*

2.1	The Conduction Rate Equation	44
2.2	The Thermal Properties of Matter	46
2.2.1	Thermal Conductivity	46
2.2.2	Other Relevant Properties	49
2.3	The Heat Diffusion Equation	52
2.4	Boundary and Initial Conditions	60
2.5	Summary	63
	References	63
	Problems	63

CHAPTER 3***One-Dimensional, Steady-State Conduction*****73**

3.1	The Plane Wall	74
3.1.1	Temperature Distribution	74
3.1.2	Thermal Resistance	76
3.1.3	The Composite Wall	77
3.1.4	Contact Resistance	79
3.2	An Alternative Conduction Analysis	86
3.3	Radial Systems	90
3.3.1	The Cylinder	90
3.3.2	The Sphere	96
3.4	Summary of One-Dimensional Conduction Results	99
3.5	Conduction with Thermal Energy Generation	100
3.5.1	The Plane Wall	100
3.5.2	Radial Systems	106
3.5.3	Application of Resistance Concepts	110
3.6	Heat Transfer from Extended Surfaces	110
3.6.1	A General Conduction Analysis	113
3.6.2	Fins of Uniform Cross-Sectional Area	114
3.6.3	Fin Performance	120
3.6.4	Fins of Nonuniform Cross-Sectional Area	124
3.6.5	Overall Surface Efficiency	126
3.7	Summary	133
	References	134
	Problems	134

CHAPTER 4***Two-Dimensional, Steady-State Conduction*****161**

4.1	Alternative Approaches	162
4.2	The Method of Separation of Variables	163
4.3	The Graphical Method	167
4.3.1	Methodology of Constructing a Flux Plot	167
4.3.2	Determination of the Heat Transfer Rate	169
4.3.3	The Conduction Shape Factor	169
4.4	Finite-Difference Equations	173
4.4.1	The Nodal Network	173
4.4.2	Finite-Difference Form of the Heat Equation	174
4.4.3	The Energy Balance Method	175
4.5	Finite-Difference Solutions	181
4.5.1	The Matrix Inversion Method	181
4.5.2	Gauss-Seidel Iteration	182
4.5.3	Some Precautions	188
4.6	Summary	193
	References	193
	Problems	194

CHAPTER 5

Transient Conduction**211**

5.1	The Lumped Capacitance Method	212
5.2	Validity of the Lumped Capacitance Method	215
5.3	General Lumped Capacitance Analysis	218
5.4	Spatial Effects	223
5.5	The Plane Wall with Convection	225
5.5.1	Exact Solution	225
5.5.2	Approximate Solution	226
5.5.3	Total Energy Transfer	226
5.5.4	Additional Considerations	228
5.6	Radial Systems with Convection	229
5.6.1	Exact Solutions	229
5.6.2	Approximate Solutions	230
5.6.3	Total Energy Transfer	230
5.6.4	Additional Considerations	231
5.7	The Semi-Infinite Solid	236
5.8	Multidimensional Effects	242
5.9	Finite-Difference Methods	248
5.9.1	Discretization of the Heat Equation: The Explicit Method	248
5.9.2	Discretization of the Heat Equation: The Implicit Method	256
5.10	Summary	263
	References	263
	Problems	263

CHAPTER 6

Introduction to Convection**283**

6.1	The Convection Transfer Problem	284
6.2	The Convection Boundary Layers	289
6.2.1	The Velocity Boundary Layer	289
6.2.2	The Thermal Boundary Layer	290
6.2.3	The Concentration Boundary Layer	291
6.2.4	Significance of the Boundary Layers	293
6.3	Laminar and Turbulent Flow	294
6.4	The Convection Transfer Equations	296
6.4.1	The Velocity Boundary Layer	296
6.4.2	The Thermal Boundary Layer	301
6.4.3	The Concentration Boundary Layer	303
6.5	Approximations and Special Conditions	308
6.6	Boundary Layer Similarity: The Normalized Convection Transfer Equations	311
6.6.1	Boundary Layer Similarity Parameters	311
6.6.2	Functional Form of the Solutions	313
6.7	Physical Significance of the Dimensionless Parameters	318
6.8	Boundary Layer Analogies	321
6.8.1	The Heat and Mass Transfer Analogy	321

6.8.2	Evaporative Cooling	325
6.8.3	The Reynolds Analogy	327
6.9	The Effects of Turbulence	328
6.10	The Convection Coefficients	331
6.11	Summary	332
	References	332
	Problems	333

CHAPTER 7***External Flow*****345**

7.1	The Empirical Method	347
7.2	The Flat Plate in Parallel Flow	348
7.2.1	Laminar Flow: A Similarity Solution	349
7.2.2	Turbulent Flow	355
7.2.3	Mixed Boundary Layer Conditions	355
7.2.4	Special Cases	357
7.3	Methodology for a Convection Calculation	359
7.4	The Cylinder in Cross Flow	366
7.4.1	Flow Considerations	366
7.4.2	Convection Heat and Mass Transfer	368
7.5	The Sphere	374
7.6	Flow Across Banks of Tubes	377
7.7	Impinging Jets	387
7.7.1	Hydrodynamic and Geometric Considerations	387
7.7.2	Convection Heat and Mass Transfer	389
7.8	Packed Beds	393
7.9	Summary	394
	References	396
	Problems	396

CHAPTER 8***Internal Flow*****419**

8.1	Hydrodynamic Considerations	420
8.1.1	Flow Conditions	420
8.1.2	The Mean Velocity	421
8.1.3	Velocity Profile in the Fully Developed Region	422
8.1.4	Pressure Gradient and Friction Factor in Fully Developed Flow	424
8.2	Thermal Considerations	425
8.2.1	The Mean Temperature	426
8.2.2	Newton's Law of Cooling	427
8.2.3	Fully Developed Conditions	427
8.3	The Energy Balance	431
8.3.1	General Considerations	431
8.3.2	Constant Surface Heat Flux	432
8.3.3	Constant Surface Temperature	435
8.4	Laminar Flow in Circular Tubes: Thermal Analysis and Convection Correlations	439
8.4.1	The Fully Developed Region	439

8.4.2 The Entry Region	443
8.5 Convection Correlations: Turbulent Flow in Circular Tubes	444
8.6 Convection Correlations: Noncircular Tubes	449
8.7 The Concentric Tube Annulus	454
8.8 Heat Transfer Enhancement	456
8.9 Convection Mass Transfer	457
8.10 Summary	459
References	461
Problems	461

CHAPTER 9***Free Convection*****481**

9.1 Physical Considerations	482
9.2 The Governing Equations	484
9.3 Similarity Considerations	486
9.4 Laminar Free Convection on a Vertical Surface	487
9.5 The Effects of Turbulence	490
9.6 Empirical Correlations: External Free Convection Flows	492
9.6.1 The Vertical Plate	493
9.6.2 Inclined and Horizontal Plates	496
9.6.3 The Long Horizontal Cylinder	501
9.6.4 Spheres	504
9.7 Free Convection within Parallel Plate Channels	506
9.7.1 Vertical Channels	506
9.7.2 Inclined Channels	508
9.8 Empirical Correlations: Enclosures	509
9.8.1 Rectangular Cavities	509
9.8.2 Concentric Cylinders	512
9.8.3 Concentric Spheres	513
9.9 Combined Free and Forced Convection	515
9.10 Convection Mass Transfer	516
9.11 Summary	516
References	517
Problems	518

CHAPTER 10***Boiling and Condensation*****535**

10.1 Dimensionless Parameters in Boiling and Condensation	536
10.2 Boiling Modes	537
10.3 Pool Boiling	538
10.3.1 The Boiling Curve	538
10.3.2 Modes of Pool Boiling	540
10.4 Pool Boiling Correlations	543
10.4.1 Nucleate Pool Boiling	543
10.4.2 Critical Heat Flux for Nucleate Pool Boiling	545
10.4.3 Minimum Heat Flux	545
10.4.4 Film Pool Boiling	546
10.4.5 Parametric Effects on Pool Boiling	547

10.5	Forced-Convection Boiling	552
10.5.1	External Forced-Convection Boiling	552
10.5.2	Two-Phase Flow	553
10.6	Condensation: Physical Mechanisms	554
10.7	Laminar Film Condensation on a Vertical Plate	556
10.8	Turbulent Film Condensation	560
10.9	Film Condensation on Radial Systems	565
10.10	Film Condensation in Horizontal Tubes	567
10.11	Dropwise Condensation	568
10.12	Summary	569
	References	569
	Problems	571

CHAPTER 11

Heat Exchangers

581

11.1	Heat Exchanger Types	582
11.2	The Overall Heat Transfer Coefficient	584
11.3	Heat Exchanger Analysis: Use of the Log Mean Temperature Difference	587
11.3.1	The Parallel-Flow Heat Exchanger	588
11.3.2	The Counterflow Heat Exchanger	590
11.3.3	Special Operating Conditions	591
11.3.4	Multipass and Cross-Flow Heat Exchangers	592
11.4	Heat Exchanger Analysis: The Effectiveness–NTU Method	599
11.4.1	Definitions	599
11.4.2	Effectiveness–NTU Relations	600
11.5	Methodology of a Heat Exchanger Calculation	607
11.6	Compact Heat Exchangers	613
11.7	Summary	618
	References	619
	Problems	619

CHAPTER 12

Radiation: Processes and Properties

633

12.1	Fundamental Concepts	634
12.2	Radiation Intensity	637
12.2.1	Definitions	637
12.2.2	Relation to Emission	640
12.2.3	Relation to Irradiation	643
12.2.4	Relation to Radiosity	645
12.3	Blackbody Radiation	646
12.3.1	The Planck Distribution	647
12.3.2	Wien's Displacement Law	647
12.3.3	The Stefan-Boltzmann Law	648
12.3.4	Band Emission	649
12.4	Surface Emission	654
12.5	Surface Absorption, Reflection, and Transmission	662
12.5.1	Absorptivity	664

12.5.2 Reflectivity	665
12.5.3 Transmissivity	666
12.5.4 Special Considerations	667
12.6 Kirchhoff's Law	672
12.7 The Gray Surface	673
12.8 Environmental Radiation	680
12.9 Summary	686
References	688
Problems	689

CHAPTER 13

Radiation Exchange Between Surfaces 717

13.1 The View Factor	718
13.1.1 The View Factor Integral	718
13.1.2 View Factor Relations	719
13.2 Blackbody Radiation Exchange	728
13.3 Radiation Exchange Between Diffuse, Gray Surfaces in an Enclosure	731
13.3.1 Net Radiation Exchange at a Surface	732
13.3.2 Radiation Exchange Between Surfaces	732
13.3.3 The Two-Surface Enclosure	738
13.3.4 Radiation Shields	738
13.3.5 The Reradiating Surface	742
13.4 Multimode Heat Transfer	746
13.5 Additional Effects	749
13.5.1 Volumetric Absorption	750
13.5.2 Gaseous Emission and Absorption	750
13.6 Summary	754
References	755
Problems	755

CHAPTER 14

Diffusion Mass Transfer 783

14.1 Physical Origins and Rate Equations	784
14.1.1 Physical Origins	784
14.1.2 Mixture Composition	785
14.1.3 Fick's Law of Diffusion	786
14.1.4 Restrictive Conditions	787
14.1.5 Mass Diffusion Coefficient	791
14.2 Conservation of Species	791
14.2.1 Conservation of Species for a Control Volume	792
14.2.2 The Mass Diffusion Equation	792
14.3 Boundary and Initial Conditions	795
14.4 Mass Diffusion Without Homogeneous Chemical Reactions	798
14.4.1 Stationary Media with Specified Surface Concentrations	799
14.4.2 Stationary Media with Catalytic Surface Reactions	802
14.4.3 Equimolar Counterdiffusion	805
14.4.4 Evaporation in a Column	808
14.5 Mass Diffusion with Homogeneous Chemical Reactions	810

14.6	Transient Diffusion	813
	References	817
	Problems	818
APPENDIX A		
<i>Thermophysical Properties of Matter</i>		825
APPENDIX B		
<i>Mathematical Relations and Functions</i>		855
APPENDIX C		
<i>Thermal Conditions Associated with Uniform Energy Generation in One-Dimensional, Steady-State Systems</i>		861
APPENDIX D		
<i>Graphical Representation of One-Dimensional, Transient Conduction in the Plane Wall, Long Cylinder, and Sphere</i>		869
APPENDIX E		
<i>An Integral Laminar Boundary Layer Solution for Parallel Flow Over a Flat Plate</i>		875
