

# Contents

- 1. Introduction 7**
- 2. Theory of elasticity 14**
  - 2.1 Elastic parameters 15
  - 2.2 Stresses and Strains in a continuum 17
  - 2.3 Boussinesq's equations 23
- 3. Assumptions of the theory of elasticity versus reality 30**
  - 3.1 Stress concentration 31
  - 3.2 Anisotropy 33
  - 3.3 Shear sensitivity 34
  - 3.4 Probabilistic stress distribution 36
- 4. Odemark's method 38**
  - 4.1 Example of the Use of Odemark's Method 41
  - 4.2 Westergaard's equations for rigid pavements 43
- 5. The Finite Element Method (FEM) 48**
- 6. Non-linear models 53**
- 7. Viscous and visco-elastic models (Rheology) 59**
  - 7.1 Kelvin model 60
  - 7.2 Maxwell model 63
  - 7.3 Burgers model 64
  - 7.4 Parabolic element 66
  - 7.5 The SHRP model 67
  - 7.6 Temperature shift factor 68
- 8. Distinct Element Method 70**
  - 8.1 Two dimensional stress distribution 71
  - 8.2 Biaxial tests on angular elements 78
- 9. Structural damage prediction 87**
  - 9.1 Example of HDM III model 88
  - 9.2 Deflection is a poor substitute for bearing capacity 92
  - 9.3 Asphalt strain criteria 94
  - 9.4 Continuum Damage Mechanics 97
    - 9.4.1 Damage based on Actual Stress 99
    - 9.4.2 Damage based on Energy Density 100
    - 9.4.3 Damage based on Delayed Elastic Energy Density 102
  - 9.5 Finite Element simulation of asphalt damage 104
