

C O N T E N T S

Foreword	vii
Preface	xiii
Acknowledgments	xvii
Abbreviations	xix
1 Introduction	1
1.1 Seismic Design	1
1.2 Motion Control Systems	4
2 Basic Principles	9
2.1 Classification	9
2.2 Illustrative Examples of Application	11
2.2.1 Elastic Structures	11
2.2.2 Yielding Structures with Proper Plastic Hinge Formation	13
2.2.3 Yielding Structures with Improper Plastic Hinge Formation	15
2.3 Analysis of Linear Viscoelastic Structures	17
2.4 Modification of Response Spectrum for Higher Damping	23
2.5 Considerations in Design and Analysis	26
2.5.1 Dissipation of Energy	26
2.5.2 Effect of Bracing	27
2.5.3 Axial Forces in Columns	29
2.6 Simplified Nonlinear Analysis of Structures with Passive Energy Dissipation Systems	30
2.6.1 General Description of Simplified Nonlinear Methods of Analysis	32
2.6.2 Estimating Response of Yielding Simple Systems with Energy Dissipating Devices	34
2.6.3 Estimating Response in Higher Modes	44
2.6.4 Example of Application of Simplified Nonlinear Method of Analysis	46
2.6.5 Nonlinear Dynamic Analysis of Example Building	56

2.7	Energy Dissipation Devices as Elements of Seismic Isolation Systems	59
2.8	Menshin Design	62
3	Mathematical Modeling	65
3.1	Hysteretic Systems	67
3.1.1	Metallic Dampers	68
3.1.2	Friction Dampers	75
3.2	Viscoelastic Systems	80
3.2.1	Viscoelastic Solid Dampers	81
3.2.2	Viscoelastic Fluid Dampers	86
3.3	Re-centering Systems	93
3.3.1	Pressurized Fluid Dampers	94
3.3.2	Preloaded Spring-Friction Dampers	98
3.3.3	Phase Transformation Dampers	98
3.4	Dynamic Vibration Absorbers	101
3.4.1	Tuned Mass Dampers	102
3.4.2	Tuned Liquid Dampers	110
3.5	Analysis of Structures with Passive Motion Control Systems	115
3.5.1	General Formulation	115
3.5.2	Modal Superposition Method	117
3.5.3	Direct Time Domain Analysis	120
3.5.4	Alternative Formulations for Viscoelastic Systems	123
4	Recent Developments	127
4.1	Metallic Dampers	127
4.2	Friction Dampers	131
4.3	Viscoelastic Dampers	147
4.4	Viscoelastic Fluid Dampers	158
4.5	Tuned Mass Dampers	167
4.6	Tuned Liquid Dampers	172
4.7	Phase Transformation Dampers	174
4.8	Other Energy Dissipators	180
5	Review of Modern Applications	183
5.1	Metallic Dampers	183
5.2	Friction Dampers	190
5.3	Viscoelastic Dampers	196
5.4	Viscoelastic Fluid Dampers	203
5.5	Tuned Mass Dampers	208
5.6	Tuned Liquid Dampers	216

6	Guidelines for Analyzing Structures with Passive Energy Dissipation Systems	219
6.1	Tentative Requirements of SEAONC	220
6.2	1994 NEHRP Recommended Provisions	220
6.3	Applied Technology Council Project 33	221
7	Semi-Active Control Systems	223
7.1	Semi-Active Mass Dampers	225
7.2	Semi-active Fluid Dampers	232
 Appendix A: Structural Applications of Passive Energy Dissipation in North America		
		245
 Appendix B: Structural Applications of Active and Semi-active Systems in Japan
