

Contents

Chapter 1	Plastics and Bioplastics Overview	1
	<i>D. Grewell</i>	
1.1	Plastics and Polymers	1
1.2	Plastics <i>versus</i> Polymers	2
1.3	Molecular Structures	3
1.4	Co-polymers and Blends	9
1.5	Composites	9
1.6	End-of-life of Plastics	11
1.6.1	Recycling	11
1.6.2	Incineration	12
1.6.3	Degradation	12
	Abbreviations	13
	References	14
Chapter 2	Polymerization and Synthesis from Biobased Feedstocks	15
	<i>Michael J. Forrester, Fang-Yi Lin and Eric W. Cochran</i>	
2.1	Introduction	15
2.2	Step-growth Polymerization	16
2.2.1	Introduction to Step-growth Polymerization	16
2.3	Biopolymer Step-growth Polymers	21
2.3.1	Bioreplacement Polymers	21
2.3.2	Step-growth Conclusions	27
2.4	Ionic Polymerization	29
2.4.1	Introduction to Ionic Polymerization	29

Green Chemistry Series No. 79

Bioplastics and Biocomposites: A Practical Introduction

Edited by David Grewell

© The Royal Society of Chemistry 2024

Published by the Royal Society of Chemistry, www.rsc.org

2.4.2	Basics and Equations of Anionic Polymerization	29
2.4.3	Basics and Equations of Cationic Polymerization	31
2.4.4	Common Petroleum Anionic Polymerization Products and Methods	32
2.4.5	Common Petroleum Cationic Polymerization Products and Methods	35
2.4.6	Anionic Polymerization of Biopolymers	35
2.4.7	Cationic Polymerization of Biopolymers	36
2.4.8	Ionic Polymerization of Biopolymers: Conclusions	37
2.5	Metathesis Polymerization	38
2.5.1	Mechanism	38
2.5.2	Catalyst Choice	39
2.5.3	Acyclic Alkene Metathesis Polymerization	39
2.5.4	Non-olefin-based Acyclic Metathesis Polymerization	42
2.5.5	Ring-opening Metathesis Polymerization (ROMP)	43
2.6	Radical Polymerization	46
2.6.1	Free Radical Polymerization	47
2.6.2	Controlled Radical Polymerization	48
2.7	Conclusion	58
	References	58
Chapter 3	Overview of Bioplastics	63
	<i>D. Grewell</i>	
3.1	Bioplastics	63
3.2	Evaluating Bio Content	67
3.3	Regulations	69
3.4	Composites	69
	Abbreviations	70
	References	70
Chapter 4	Polymer Processing Principles	72
	<i>Elmar Moritzer, Volker Schöppner, Michael Kröker, Claudine Reisdörfer, Johanna Müller, Maike Engelen and David Grewell</i>	
4.1	Introduction	72
4.1.1	Heating Thermoplastics	72
4.2	Supply Chain	74

4.3	Material Properties	75
4.4	Polymer Processing Machines	77
4.4.1	Screw Machines	78
4.5	Cooling	83
4.5.1	Introduction	83
4.5.2	Calculation of the Cooling Process	83
4.5.3	Cooling Technologies	88
4.6	Extrusion Lines	89
4.7	Injection Molding	90
4.7.1	Introduction	90
4.7.2	Design of Injection Molding Machines	97
	Abbreviation	101
	References	101

Chapter 5 Biocomposites 102

Alper Kizitas, Chad Ulven, Mitch Michel and D. Grewell

5.1	Fiber-based Composites	102
5.2	Particle-based Composites	103
5.3	Rule of Mixtures for Density	103
5.4	Theory of Composites	104
5.4.1	Stiffness of Composites in the Longitudinal Direction	104
5.4.2	Stiffness of Composites in the Transverse Direction	105
5.5	Biocomposites	107
5.6	Advantages and Limitations of Biocomposites	110
5.7	Applications	113
5.7.1	Upgrading Biomass for Headlamp Housing	113
5.7.2	Latest Breakthroughs with Sustainable Hybrid Composites in Lightweight and Semi-structural Applications	115
5.7.3	Rice Hull-filled PP	117
5.7.4	Cellulose Filler in Recycled Polyamide 6/Polypropylene Blends	118
	Abbreviations	118
	References	119

Chapter 6 Fermentation of Polyesters (PHA and PLA) 122

Melissa Montalbo-Lomboy

6.1	Introduction	122
-----	--------------	-----

6.2	Fermentation	124
6.2.1	Fermentation Nutritional Requirements	125
6.3	Batch Fermentation	125
6.4	Fed-batch Fermentation	126
6.5	Continuous Fermentation	127
6.6	Polyhydroxyalkanoates	128
6.7	PHA Microorganisms	128
6.7.1	PHA Produced <i>Via R. eutropha</i>	131
6.7.2	PHA Produced <i>Via A. latus</i>	132
6.7.3	PHA Produced <i>Via Methylotrrops</i>	133
6.7.4	PHA Produced <i>Via</i> Phototrophs	133
6.7.5	PHA Produced <i>Via</i> Mixed Culture	135
6.8	PHA Fermentation Strategies	136
6.8.1	PHA Produced in Batch	136
6.8.2	PHA Produced in Fed-batch	139
6.8.3	PHA Produced in Continuous	143
6.8.4	PHA Produced in Solid-state Fermentation	146
6.9	Polylactic Acid (PLA)	148
6.9.1	Lactic Acid Bacteria	148
6.9.2	Fungi and Yeast	150
6.10	PLA Fermentation Strategies	151
6.10.1	PLA Produced in Batch	151
6.10.2	PLA Produced in Fed-batch	154
6.10.3	PLA Produced in Continuous Fermentation	155
6.10.4	PLA Produced in Repeated Batch	155
6.11	Summary	155
	Abbreviations	156
	References	156

Chapter 7 Bio-based Polyesters 167

D. Grewell, Tianyi Sun, Thidarat Tosukhowong, Jed Randall and Molly Morse

7.1	Polyesters	167
7.2	Polylactic Acids	168
7.2.1	Introduction	168
7.2.2	Synthesis and Production	169
7.2.3	Heat Resistance	173
7.2.4	Brittleness and Toughness	174
7.2.5	Controlled Hydrolysis	177
7.2.6	Melt Strength	180
7.2.7	Summary	180

7.3	Polyhydroxyalkanoates	181
7.3.1	Production of PHAs	182
7.4	Processing and Properties of PHA	185
7.4.1	Properties	185
7.4.2	Processing	186
7.4.3	PHA as a Circular Material	187
7.4.4	Recycling	187
7.4.5	Biodegradation	187
7.4.6	Closed-loop Production of PHAs	189
7.5	PHA Applications	189
7.6	PHA Conclusions	190
7.7	Other Polyester	190
7.8	Introduction to PBS	191
7.8.1	Summary	191
7.8.2	Synthesis	192
7.8.3	Properties	193
7.8.4	Degradability	194
7.8.5	Copolymers/Blends/Composites	195
7.8.6	Processing	196
7.8.7	Applications	197
7.8.8	Conclusion	200
	Abbreviations	200
	References	201

Chapter 8 Protein-based Plastics 213

D. Grewell, J. Schrader and G. Srinivasan

8.1	Chemistry	213
8.2	Material Science	215
8.3	Engineering	217
8.4	Product Design	217
8.5	Economics	217
8.6	Applications	218
8.7	Summary	221
	Abbreviations	222
	References	222

Chapter 9 Starch-based Biopolymer Films 224

A. Travalini, I. Demiate and B. Lamsal

9.1	Starch and Its Molecular Structure	224
9.1.1	Starch Molecular Structure	225

9.1.2	Conventional Sources of Starch	230
9.1.3	Non-conventional Sources of Starch	230
9.2	Properties of Starch Films and Their Characterization	230
9.2.1	Film Physical Properties	231
9.2.2	Mechanical Properties	231
9.2.3	Thermal Properties	233
9.2.4	Transmission and Barrier Properties	237
9.3	Formulation of Starch-based Plastics	238
9.3.1	Plasticizers	238
9.4	Thermoplastic Starch and Its Applications	239
9.4.1	Reinforced Starch Films and Composites	241
9.5	Processing Conditions for Thermoplastic Starch	241
9.5.1	Casting of Starch Films	242
9.5.2	Extrusion Systems	242
	Abbreviations	242
	References	243
Chapter 10	Bio-based Polymers and Resins in Paints and Coatings	249
	<i>Dean C. Webster</i>	
10.1	Introduction	249
10.2	Drying Oils	251
10.3	Alkyd Resins	252
10.4	Cellulose-derived Resins	253
10.5	Natural Resins	254
10.6	Recent Advances	254
10.7	Vegetable/Seed Oils in Coatings Cured by Autoxidation	254
10.8	Derivatives of Vegetable/Seed Oils	257
10.9	Monomers and Polymers Derived from Cellulose	260
10.10	Summary and Outlook	264
	Abbreviations	264
	References	265
Chapter 11	End-of-life of Plastics/Bioplastics	274
	<i>Neha Mulchandani and Ramani Narayan</i>	
11.1	Introduction	274
11.2	End-of-life Strategies	277
11.2.1	Mechanical Recycling	277
11.2.2	Chemical Recycling	278

11.3	Bio-based Plastics	284
11.3.1	Understanding Bio-based	281
11.3.2	Understanding Biodegradability	284
11.3.3	Applications of Biodegradable, Bio-based Polymers in Agricultural Mulch Films	287
11.4	Conclusions	287
	Abbreviations	287
	References	287

Subject Index	291
