Preface to the third edition	xv
------------------------------------	----

CHAPTER 1 Introduction	1
-------------------------------------	----------

1.1 General introduction to renewable energy technologies.....	1
1.2 Energy demand and renewable energy.....	2
1.3 Energy-related environmental problems and the role of renewables	7
1.3.1 Acid rain	9
1.3.2 Ozone layer depletion	9
1.3.3 Global climate change.....	10
1.3.4 Nuclear energy	11
1.3.5 Renewable energy technologies	13
1.3.6 Current state of renewable energy technologies in the world.....	16
1.4 State of the climate	19
1.4.1 Global temperature	19
1.4.2 Carbon dioxide	21
1.4.3 Methane	22
1.4.4 Carbon monoxide	22
1.4.5 Nitrous oxide and sulfur hexafluoride	23
1.4.6 Halocarbons	23
1.4.7 Sea level.....	23
1.5 A brief history of solar energy	24
1.5.1 Photovoltaics.....	27
1.5.2 Solar desalination	28
1.5.3 Solar drying	32
1.5.4 Passive solar buildings	33
1.6 Other renewable energy systems	33
1.6.1 Wind energy	33
1.6.2 Biomass	36
1.6.3 Geothermal energy	39
1.6.4 Hydrogen	42
1.6.5 Ocean energy	44
Exercise.....	50
References.....	51

CHAPTER 2 Environmental Characteristics	55
--	-----------

2.1 Reckoning of time	55
2.1.1 Equation of time.....	56
2.1.2 Longitude correction	56
2.2 Solar angles.....	58

2.2.1	The incidence angle for moving surfaces	68
2.2.2	Sun path diagrams	74
2.2.3	Shadow determination	74
2.3	Solar radiation	78
2.3.1	General.....	78
2.3.2	Thermal radiation	79
2.3.3	Transparent plates.....	86
2.3.4	Radiation exchange between surfaces	90
2.3.5	Extraterrestrial solar radiation.....	93
2.3.6	Atmospheric attenuation	97
2.3.7	Terrestrial irradiation.....	98
2.3.8	Total radiation on tilted surfaces.....	102
2.3.9	Solar radiation measuring equipment	108
2.4	The solar resource.....	111
2.4.1	Typical meteorological year.....	114
2.4.2	Typical meteorological year, second generation	116
2.4.3	Typical meteorological year, third generation	121
	Exercises	122
	References.....	124
CHAPTER 3	Solar Energy Collectors	127
3.1	Stationary collectors	127
3.1.1	Flat-plate collector (FPC).....	127
3.1.2	Compound parabolic collector (CPC).....	136
3.1.3	Evacuated tube collector (ETC).....	139
3.1.4	Outlook of the technology	142
3.2	Sun-tracking concentrating collectors	143
3.2.1	Parabolic trough collector (PTC)	145
3.2.2	Fresnel collectors.....	151
3.2.3	Parabolic dish reflector (PDR)	153
3.2.4	Heliostat field collector (HFC).....	154
3.3	Thermal analysis of flat-plate collectors	156
3.3.1	Absorbed solar radiation	156
3.3.2	Collector energy losses	161
3.3.3	Temperature distribution between the tubes and collector efficiency factor	169
3.3.4	Heat removal factor, flow factor, and thermal efficiency	175
3.3.5	Serpentine collector.....	178
3.3.6	Heat losses from unglazed collectors	179
3.4	Thermal analysis of air collectors	180
3.5	Practical considerations for flat-plate collectors	185
3.6	Concentrating collectors	185

3.6.1 Optical analysis of a compound parabolic collector	188
3.6.2 Thermal analysis of compound parabolic collectors	190
3.6.3 Optical analysis of parabolic trough collectors	196
3.6.4 Thermal analysis of parabolic trough collectors	203
3.7 Second law analysis	213
3.7.1 Minimum entropy generation rate	214
3.7.2 Optimum collector temperature	216
3.7.3 Non-isothermal collector	217
Exercises	218
Assignment: Design of a flat-plate solar collector	220
Estimate the thermal efficiency of the collector ($\eta\%$)	220
References	221

CHAPTER 4 Performance of Solar Collectors

4.1 Collector thermal efficiency	227
4.1.1 Effect of flow rate	231
4.1.2 Collectors in series	232
4.1.3 Standard requirements	233
4.2 Collector incidence angle modifier	236
4.2.1 Flat-plate collectors	236
4.2.2 Concentrating collectors	237
4.3 Concentrating collector acceptance angle	238
4.4 Collector time constant	239
4.5 Dynamic system test method	241
4.6 Efficiency parameters conversion	242
4.7 Assessment of uncertainty in solar collector testing	243
4.7.1 Fitting and uncertainties in efficiency testing results	246
4.8 Collector test results and preliminary collector selection	248
4.9 Quality test methods	250
4.9.1 Internal pressure test	251
4.9.2 Rupture or collapse test	252
4.9.3 Exposure test	252
4.9.4 External thermal shock test	253
4.9.5 Internal thermal shock test	253
4.9.6 Rain penetration	253
4.9.7 Freeze resistance test	253
4.9.8 Impact resistance test	254
4.10. European standards	254
4.10.1. Solar Keymark	256
4.11. Data acquisition systems	257
4.11.1. Portable data loggers	259
4.11.2. IoT in data acquisition systems	260

Exercises	261
References	262
CHAPTER 5 Solar Water-Heating Systems	265
5.1 Passive systems	266
5.1.1 Thermosiphon systems	266
5.1.2 Integrated collector storage systems	274
5.2 Active systems	277
5.2.1 Direct circulation systems	278
5.2.2 Indirect water-heating systems	279
5.2.3 Air water-heating systems	282
5.2.4 Heat pump systems	282
5.2.5 Pool heating systems	284
5.3 Heat storage systems	288
5.3.1 Air system thermal storage	289
5.3.2 Liquid system thermal storage	290
5.3.3 Thermal analysis of storage systems	293
5.4 Module and array design	299
5.4.1 Module design	299
5.4.2 Array design	299
5.5 Differential temperature controller	311
5.5.1 Placement of sensors	314
5.6 Hot water demand	315
5.7 Solar water heater performance evaluation	317
5.8 Simple system models	319
5.9 Practical considerations	321
5.9.1 Pipes, supports, and insulation	321
5.9.2 Pumps	321
5.9.3 Valves	322
5.9.4 Instrumentation	323
Exercises	323
References	326
CHAPTER 6 Solar Space Heating and Cooling	329
6.1 Thermal load estimation	329
6.1.1 The heat balance method	330
6.1.2 The transfer function method	332
6.1.3 Heat extraction rate and room temperature	336
6.1.4 Degree-day method	337
6.1.5 Building heat transfer	338
6.2 Passive space-heating design	341
6.2.1 Building construction: thermal mass effects	341

6.2.2 Building shape and orientation	351
6.2.3 Insulation	352
6.2.4 Windows: sunspaces	355
6.2.5 Overhangs	356
6.2.6 Natural ventilation	360
6.3 Solar space heating and cooling	362
6.3.1 Space heating and service hot water	362
6.3.2 Air systems	365
6.3.3 Water systems	366
6.3.4 Location of auxiliary heater	371
6.3.5 Heat pump systems	372
6.4 Solar cooling	375
6.4.1 Adsorption units	379
6.4.2 Absorption units	382
6.5 Solar cooling with absorption refrigeration	394
6.6 Solar photovoltaic powered heating and cooling	397
Exercises	399
References	401

CHAPTER 7 Industrial Process Heat, Chemistry Applications, and

Solar Dryers	405
7.1 Industrial process heat: general design considerations	405
7.1.1 Solar industrial air and water systems	410
7.2 Solar steam generation systems	412
7.2.1 Steam generation methods	412
7.2.2 Flash vessel design	414
7.3 Solar chemistry applications	415
7.3.1 Reforming of fuels	415
7.3.2 Fuel cells	416
7.3.3 Materials processing	424
7.3.4 Solar detoxification	424
7.4 Solar dryers	425
7.4.1 Active solar energy dryers	427
7.4.2 Passive solar energy dryers	430
7.4.3 General remarks	433
7.5 Greenhouses	435
7.5.1 Greenhouse materials	436
Exercises	436
Assignment	437
References	437

CHAPTER 8	Solar Desalination Systems.....	441
8.1	Introduction.....	441
8.1.1	Water and energy.....	441
8.1.2	Water demand and consumption.....	442
8.1.3	Desalination and energy.....	442
8.2	Desalination processes.....	444
8.2.1	Desalination systems exergy analysis.....	446
8.2.2	Exergy analysis of thermal desalination systems.....	450
8.3	Direct collection systems.....	451
8.3.1	Classification of solar distillation systems.....	453
8.3.2	Performance of solar stills.....	455
8.3.3	General comments.....	457
8.4	Indirect collection systems.....	458
8.4.1	The multi-stage flash process.....	459
8.4.2	The multiple-effect boiling process.....	462
8.4.3	The vapor compression process.....	468
8.4.4	Reverse osmosis.....	470
8.4.5	Electrodialysis.....	474
8.4.6	Membrane distillation.....	475
8.5	Review of renewable energy desalination systems.....	478
8.5.1	Solar thermal energy.....	479
8.5.2	Solar ponds.....	479
8.5.3	Solar photovoltaic technology.....	480
8.5.4	Wind power.....	480
8.5.5	Hybrid solar PV-wind power.....	481
8.5.6	Geothermal energy.....	481
8.6	Process selection.....	482
	Exercises.....	487
	References.....	487
CHAPTER 9	Photovoltaic Systems.....	495
9.1	Semiconductors.....	497
9.1.1	p-n junction.....	498
9.1.2	Photovoltaic effect.....	500
9.1.3	PV cell characteristics.....	502
9.2	Photovoltaic panels.....	509
9.2.1	PV arrays.....	510
9.2.2	Types of PV technology.....	512
9.3	Related equipment.....	515
9.3.1	Batteries.....	515
9.3.2	Inverters.....	516

9.3.3	Charge controllers	517
9.3.4	Peak-power trackers	518
9.3.5	Remote fault detection, diagnosis, and cleaning of photovoltaic systems	519
9.4	Applications	521
9.4.1	Direct-coupled PV system.....	521
9.4.2	Stand-alone applications	521
9.4.3	Grid-connected system	522
9.4.4	Hybrid-connected system	522
9.4.5	Types of applications.....	523
9.5	Design of PV systems.....	526
9.5.1	Electrical loads	526
9.5.2	Absorbed solar radiation	528
9.5.3	Cell temperature	533
9.5.4	Sizing of PV systems	535
9.6	Tilt and yield.....	540
9.6.1	Fixed tilt	540
9.6.2	Trackers	541
9.6.3	Shading	542
9.6.4	Tilting versus spacing.....	543
9.7	Concentrating PV.....	544
9.8	Hybrid PV/T systems.....	546
9.8.1	Hybrid PV/T applications	549
9.8.2	Water and air-heating BIPV/T	551
	Exercises	552
	Assignment 1	553
	Assignment 2	554
	Assignment 3	554
	Assignment 4	554
	References.....	554

CHAPTER 10 Solar Thermal Power Systems 559

10.1	Introduction.....	559
10.2	Parabolic trough collector systems.....	562
10.2.1	Description of the PTC power plants	565
10.2.2	Outlook for the technology	568
10.3	Power tower systems	570
10.3.1	System characteristics	574
10.4	Dish systems	575
10.4.1	Dish collector system characteristics	577
10.5	Thermal analysis of solar power plants	577

10.6	Solar updraft towers	582
10.6.1	Initial steps and first demonstration	584
10.6.2	Thermal analysis of solar updraft tower plants	586
10.7	Solar ponds	588
10.7.1	Practical design considerations	590
10.7.2	Methods of heat extraction.....	592
10.7.3	Transmission estimation.....	593
10.7.4	Experimental solar ponds.....	594
10.7.5	Applications.....	595
	Exercises	597
	Assignment	597
	References.....	598
CHAPTER 11	Designing and Modeling Solar Energy Systems.....	601
11.1	<i>F</i> -chart method and program.....	601
11.1.1	Performance and design of liquid-based solar heating systems.....	605
11.1.2	Performance and design of air-based solar heating systems.....	615
11.1.3	Performance and design of solar service water systems	621
11.1.4	Thermosiphon solar water-heating systems.....	623
11.1.5	General remarks	635
11.1.6	<i>F</i> -chart program.....	636
11.2	Utilizability method.....	636
11.2.1	Hourly utilizability	637
11.2.2	Daily utilizability.....	639
11.2.3	Design of active systems with the utilizability method	643
11.3	The Φ , <i>f</i> -chart method	648
11.3.1	Storage tank-losses correction.....	654
11.3.2	Heat exchanger correction.....	656
11.4	Unutilizability method.....	657
11.4.1	Direct gain systems	658
11.4.2	Collector storage walls.....	662
11.4.3	Active collection with passive storage systems.....	667
11.5	Modeling and simulation of solar energy systems	670
11.5.1	TRNSYS simulation program	672
11.5.2	WATSUN simulation program	678
11.5.3	Polysun simulation program	680
11.5.4	System advisor model	681
11.6	Artificial intelligence in solar energy systems.....	682
11.6.1	Artificial neural networks.....	683
11.6.2	Genetic algorithms	697
11.6.3	Fuzzy logic	700
11.6.4	Hybrid systems	707

11.7	Limitations of simulations.....	709
	Exercises	709
	Assignments.....	713
1.	Design of a solar thermal system.....	713
2.	Simulation of a solar domestic water-heating system.....	714
3.	Simulation of a simple building with daylight access.....	715
	References.....	715
CHAPTER 12	Solar Economic Analysis.....	719
12.1	Life cycle analysis.....	720
12.1.1	Life cycle costing	721
12.2	Time value of money.....	724
12.3	Description of the life cycle analysis method.....	726
12.3.1	Fuel cost of non-solar energy system examples.....	731
12.3.2	Hot-water system example	733
12.3.3	Hot-water system optimization example	736
12.3.4	Payback time	738
12.4	The P_1 , P_2 method.....	740
12.4.1	Optimization using P_1 , P_2 method.....	743
12.5	Uncertainties in economic analysis.....	747
	Exercises	749
	Assignment #1	751
	Assignment #2: optimized design of a solar thermal system.....	751
	References.....	752
CHAPTER 13	Wind Energy Systems	753
13.1	Wind characteristics.....	753
13.1.1	Wind speed profiles	754
13.1.2	Wind speed variation with time	757
13.1.3	Statistical representation of wind speed	759
13.1.4	Wind resources	762
13.1.5	Wind resource atlases.....	764
13.1.6	Detailed study of wind speed.....	764
13.2	One-dimensional model for wind turbines	765
13.3	Wind turbines.....	769
13.3.1	Types of wind turbines.....	770
13.3.2	Power characteristics of wind turbines	774
13.3.3	Offshore wind turbines.....	775
13.3.4	Wind parks.....	775
13.4	Economic issues	776
13.5	Wind-energy exploitation problems	777

Exercises	778
Assignment	779
References.....	779
Appendix 1 Nomenclature.....	781
Appendix 2 Definitions	789
Appendix 3 Sun Diagrams	795
Appendix 4 Terrestrial Spectral Irradiance.....	807
Appendix 5 Thermo-physical Properties of Materials and Other Useful Information	811
Appendix 6 Equations for the Curves of Figs. 3.38–3.40.....	825
Appendix 7 Meteorological Data	829
Appendix 8 Present Worth Factors	835
Appendix 9 Excel Functions—Goal Seek and Solver.....	843
Appendix 10 System Advisor Model.....	855
Index	865
