Preface xi
Acknowledgements xiii
Frequently used acronyms xv

1 A few preliminary fundamentals 1

1.1 Introduction 1
1.2 Modelling vibrations and vibrating systems 1
1.3 Some basic concepts 3
1.3.1 The phenomenon of beats 5
1.3.2 Displacement, velocity, acceleration and decibels 6
1.4 Springs, dampers and masses 8

2 Formulating the equations of motion 13

2.1 Introduction 13
2.2 Systems of material particles 14
2.2.1 Generalised co-ordinates, constraints and degrees of freedom 15
2.3 Virtual work and d'Alembert's principles – Lagrange and Hamilton equations 16
2.3.1 Hamilton's equations (HEs) 20
2.4 On the properties and structure of Lagrange's equations 24
2.4.1 Invariance in the form of LEs and monogenic forces 24
2.4.2 The structure of the kinetic energy and of Lagrange equations 24
2.4.3 The energy function and the conservation of energy 28
2.4.4 Elastic forces, viscous forces and Rayleigh dissipation function 29

2.4.5 *More co-ordinates than DOFs: Lagrange's multipliers* 32
2.5 *Hamilton's principle* 34
2.5.1 *More than one independent variable: continuous systems and boundary conditions* 38
2.6 *Small-amplitude oscillations* 44
2.7 *A few complements* 48
2.7.1 *Motion in a non-inertial frame of reference* 48
2.7.2 *Uniformly rotating frame* 51
2.7.3 *Ignorable co-ordinates and the Routh function* 53
2.7.4 *The Simple pendulum again: a note on non-small oscillations* 56

3 Finite DOFs systems: Free vibration 59

3.1 *Introduction* 59
3.2 *Free vibration of 1-DOF systems* 59
3.2.1 *Logarithmic decrement* 65
3.3 *Free vibration of MDOF systems: the undamped case* 67
3.3.1 *Orthogonality of eigenvectors and normalisation* 68
3.3.2 *The general solution of the undamped free-vibration problem* 70
3.3.3 *Normal co-ordinates* 72
3.3.4 *Eigenvalues and eigenvectors sensitivities* 78
3.3.5 *Light damping as a perturbation of an undamped system* 80
3.3.6 *More orthogonality conditions* 82
3.3.7 *Eigenvalue degeneracy* 83
3.3.8 *Unrestrained systems: rigid-body modes* 84
3.4 *Damped systems: classical and non-classical damping* 87
3.4.1 *Rayleigh damping* 88
3.4.2 *Non-classical damping* 90
3.5 *GEPs and QEPs: reduction to standard form* 92
3.5.1 *Undamped Systems* 93
3.5.2 *Viscously damped systems* 94
3.6 *Eigenvalues sensitivity of viscously damped systems* 96

4 Finite-DOFs systems: Response to external excitation 99

4.1 *Introduction* 99
4.2 *Response in the time-, frequency- and s-domains: IRF, Duhamel's integral, FRF and TF* 100

4.2.1 *Excitation due to base displacement, velocity or acceleration 105*
4.3 *Harmonic and periodic excitation 107*
4.3.1 *A few notes on vibration isolation 110*
4.3.2 *Eccentric excitation 112*
4.3.3 *Other forms of FRFs 114*
4.3.4 *Damping evaluation 116*
4.3.5 *Response spectrum 117*
4.4 *MDOF systems: classical damping 120*
4.4.1 *Mode 'truncation' and the mode-acceleration solution 122*
4.4.2 *The presence of rigid-body modes 125*
4.5 *MDOF systems: non-classical viscous damping, a state-space approach 126*
4.5.1 *Another state-space formulation 129*
4.6 *Frequency response functions of a 2-DOF system 133*
4.7 *A few further remarks on FRFs 137*

5 Vibrations of continuous systems 139

5.1 *Introduction 139*
5.2 *The Flexible String 140*
5.2.1 *Sinusoidal waveforms and standing waves 142*
5.2.2 *Finite strings: the presence of boundaries and the free vibration 143*
5.3 *Free longitudinal and torsional vibration of bars 148*
5.4 *A short mathematical interlude: Sturm–Liouville problems 150*
5.5 *A two-dimensional system: free vibration of a flexible membrane 156*
5.5.1 *Circular membrane with fixed edge 158*
5.6 *Flexural (bending) vibrations of beams 162*
5.7 *Finite beams with classical BCs 163*
5.7.1 *On the orthogonality of beam eigenfunctions 167*
5.7.2 *Axial force effects 168*
5.7.3 *Shear deformation and rotary inertia (Timoshenko beam) 170*
5.8 *Bending vibrations of thin plates 174*
5.8.1 *Rectangular plates 176*
5.8.2 *Circular plates 180*
5.8.3 *On the orthogonality of plate eigenfunctions 181*
5.9 *A few additional remarks 182*

5.9.1 *Self-adjointness and positive-definiteness of the beam and plate operators* 182
5.9.2 *Analogy with finite-DOFs systems* 185
5.9.3 *The free vibration solution* 188
5.10 *Forced vibrations: the modal approach* 190
5.10.1 *Alternative closed-form for FRFs* 199
5.10.2 *A note on Green's functions* 201

6 Random vibrations 207

6.1 *Introduction* 207
6.2 *The concept of random process, correlation and covariance functions* 207
6.2.1 *Stationary processes* 212
6.2.2 *Main properties of correlation and covariance functions* 214
6.2.3 *Ergodic processes* 216
6.3 *Some calculus for random processes* 219
6.4 *Spectral representation of stationary random processes* 223
6.4.1 *Main properties of spectral densities* 227
6.4.2 *Narrowband and broadband processes* 229
6.5 *Response of linear systems to stationary random excitation* 232
6.5.1 *SISO (single input–single output) systems* 233
6.5.2 *SDOF-system response to broadband excitation* 236
6.5.3 *SDOF systems: transient response* 237
6.5.4 *A note on Gaussian (normal) processes* 239
6.5.5 *MIMO (multiple inputs–multiple outputs) systems* 241
6.5.6 *Response of MDOF systems* 243
6.5.7 *Response of a continuous system to distributed random excitation: a modal approach* 245
6.6 *Threshold crossing rates and peaks distribution of stationary narrowband processes* 249

Appendix A: On matrices and linear spaces 255
Appendix B: Fourier series, Fourier and Laplace transforms 289
