## PART I

### Theory and methods

P. L. GATTI

<b>1</b>	<b>Review of some fundamentals</b>	<b>3</b>
1.1	<i>Introduction</i>	3
1.2	<i>The role of modelling (linear and nonlinear, discrete and continuous systems, deterministic and random data)</i>	4
1.3	<i>Some definitions and methods</i>	5
1.4	<i>Springs, dampers and masses</i>	17
1.5	<i>Summary and comments</i>	22
<b>2</b>	<b>Mathematical preliminaries</b>	<b>25</b>
2.1	<i>Introduction</i>	25
2.2	<i>Fourier series and Fourier transforms</i>	25
2.3	<i>Laplace transforms</i>	40
2.4	<i>The Dirac delta function and related topics</i>	47
2.5	<i>The notion of Hilbert space</i>	64
	<i>References</i>	77
<b>3</b>	<b>Analytical dynamics – an overview</b>	<b>79</b>
3.1	<i>Introduction</i>	79
3.2	<i>Systems of material particles</i>	80
3.3	<i>Generalized coordinates, virtual work and d'Alembert principles: Lagrange's equations</i>	84
3.4	<i>Hamilton's principle of least action</i>	99

3.5	<i>The general problem of small oscillations</i>	104
3.6	<i>Lagrangian formulation for continuous systems</i>	113
	<i>References</i>	118
<b>4</b>	<b>Single-degree-of-freedom systems</b>	<b>119</b>
4.1	<i>Introduction</i>	119
4.2	<i>The harmonic oscillator I: free vibrations</i>	120
4.3	<i>The harmonic oscillator II: forced vibrations</i>	132
4.4	<i>Damping in real systems, equivalent viscous damping</i>	148
4.5	<i>Summary and comments</i>	160
	<i>References</i>	161
<b>5</b>	<b>More SDOF – transient response and approximate methods</b>	<b>163</b>
5.1	<i>Introduction</i>	163
5.2	<i>Time domain – impulse response, step response and convolution integral</i>	164
5.3	<i>Frequency and s-domains. Fourier and Laplace transforms</i>	184
5.4	<i>Relationship between time-domain response and frequency-domain response</i>	194
5.5	<i>Distributed parameters: generalized SDOF systems</i>	198
5.6	<i>Summary and comments</i>	213
	<i>References</i>	215
<b>6</b>	<b>Multiple-degree-of-freedom systems</b>	<b>217</b>
6.1	<i>Introduction</i>	217
6.2	<i>A simple undamped 2-DOF system: free vibration</i>	218
6.3	<i>Undamped n-DOF systems: free vibration</i>	223
6.4	<i>Eigenvalues and eigenvectors: sensitivity analysis</i>	242
6.5	<i>Structure and properties of matrices <math>\mathbf{M}</math>, <math>\mathbf{K}</math> and <math>\mathbf{C}</math>: a few considerations</i>	250
6.6	<i>Unrestrained systems: rigid-body modes</i>	260
6.7	<i>Damped systems: proportional and nonproportional damping</i>	266
6.8	<i>Generalized and complex eigenvalue problems: reduction to standard form</i>	273
6.9	<i>Summary and comments</i>	280
	<i>References</i>	283
<b>7</b>	<b>More MDOF systems – forced vibrations and response analysis</b>	<b>285</b>
7.1	<i>Introduction</i>	285

7.2	<i>Mode superposition</i>	286
7.3	<i>Harmonic excitation: proportional viscous damping</i>	294
7.4	<i>Time-domain and frequency-domain response</i>	297
7.5	<i>Systems with rigid-body modes</i>	303
7.6	<i>The case of nonproportional viscous damping</i>	305
7.7	<i>MDOF systems with hysteretic damping</i>	312
7.8	<i>A few remarks on other solution strategies: Laplace transform and direct integration</i>	315
7.9	<i>Frequency response functions of a 2-DOF system</i>	321
7.10	<i>Summary and comments</i>	331
	<i>References</i>	333
<b>8</b>	<b>Continuous or distributed parameter systems</b>	<b>335</b>
8.1	<i>Introduction</i>	335
8.2	<i>The flexible string in transverse motion</i>	337
8.3	<i>Free vibrations of a finite string: standing waves and normal modes</i>	347
8.4	<i>Axial and torsional vibrations of rods</i>	353
8.5	<i>Flexural (bending) vibrations of beams</i>	357
8.6	<i>A two-dimensional continuous system: the flexible membrane</i>	373
8.7	<i>The differential eigenvalue problem</i>	380
8.8	<i>Bending vibrations of thin plates</i>	391
8.9	<i>Forced vibrations and response analysis: the modal approach</i>	402
8.10	<i>Final remarks: alternative forms of FRFs and the introduction of damping</i>	417
8.11	<i>Summary and comments</i>	421
	<i>References</i>	423
<b>9</b>	<b>MDOF and continuous systems: approximate methods</b>	<b>425</b>
9.1	<i>Introduction</i>	425
9.2	<i>The Rayleigh quotient</i>	426
9.3	<i>The Rayleigh–Ritz method and the assumed modes method</i>	434
9.4	<i>Summary and comments</i>	447
	<i>References</i>	449
<b>10</b>	<b>Experimental modal analysis</b>	<b>451</b>
10.1	<i>Introduction</i>	451
10.2	<i>Experimental modal analysis – overview of the fundamentals</i>	452

x Contents

10.3	<i>Modal testing procedures</i>	478
10.4	<i>Selected topics in experimental modal analysis</i>	490
10.5	<i>Summary and comments</i>	510
	<i>References</i>	511
11	<b>Probability and statistics: preliminaries to random vibrations</b>	513
11.1	<i>Introduction</i>	513
11.2	<i>The concept of probability</i>	513
11.3	<i>Random variables, probability distribution functions and probability density functions</i>	521
11.4	<i>Descriptors of random variable behaviour</i>	527
11.5	<i>More than one random variable</i>	533
11.6	<i>Some useful results: Chebyshev's inequality and the central limit theorem</i>	538
11.7	<i>A few final remarks</i>	545
	<i>References</i>	546
12	<b>Stochastic processes and random vibrations</b>	547
12.1	<i>Introduction</i>	547
12.2	<i>The concept of stochastic process</i>	548
12.3	<i>Spectral representation of random processes</i>	557
12.4	<i>Random excitation and response of linear systems</i>	567
12.5	<i>MDOF and continuous systems: response to random excitation</i>	580
12.6	<i>Analysis of narrow-band processes: a few selected topics</i>	586
12.7	<i>Summary and comments</i>	597
	<i>References</i>	598
	<b>Further reading to Part I</b>	601

PART II

Measuring instrumentation

V. FERRARI

13	<b>Basic concepts of measurement and measuring instruments</b>	605
13.1	<i>Introduction</i>	605
13.2	<i>The measurement process and the measuring instrument</i>	605
13.3	<i>Measurement errors and uncertainty</i>	607
13.4	<i>Measuring instrument functional model</i>	609

13.5	<i>Static behaviour of measuring instruments</i>	612
13.6	<i>Dynamic behaviour of measuring instruments</i>	615
13.7	<i>Loading effect</i>	623
13.8	<i>Performance specifications of measuring instruments</i>	638
13.9	<i>Summary</i>	642
	<i>References</i>	643
<b>14</b>	<b>Motion and vibration transducers</b>	<b>645</b>
14.1	<i>Introduction</i>	645
14.2	<i>Relative- and absolute-motion measurement</i>	645
14.3	<i>Contact and noncontact transducers</i>	646
14.4	<i>Relative-displacement measurement</i>	647
14.5	<i>Relative-velocity measurement</i>	659
14.6	<i>Relative-acceleration measurement</i>	661
14.7	<i>Absolute-motion measurement</i>	661
14.8	<i>Accelerometer types and technologies</i>	669
14.9	<i>Accelerometer choice, calibration and mounting</i>	679
14.10	<i>General considerations about motion measurements</i>	686
14.11	<i>Force transducers</i>	687
14.12	<i>Summary</i>	692
	<i>References</i>	695
<b>15</b>	<b>Signal conditioning and data acquisition</b>	<b>697</b>
15.1	<i>Introduction</i>	697
15.2	<i>Signals and noise</i>	698
15.3	<i>Signal DC and AC amplification</i>	700
15.4	<i>Piezoelectric transducer amplifiers</i>	707
15.5	<i>Noise and interference reduction</i>	725
15.6	<i>Analogue-to-digital conversion</i>	750
15.7	<i>Data acquisition systems and analysis instruments</i>	759
15.8	<i>Summary</i>	774
	<i>References</i>	776
	<b>Further reading to Part II</b>	<b>777</b>
	<b>Appendices</b>	
	P.L. GATTI	
<b>A</b>	<b>Finite-dimensional vector spaces and elements of matrix analysis</b>	<b>781</b>
A.1	<i>The notion of finite-dimensional vector space</i>	781

xii *Contents*

A.2 *Matrices* 787

A.3 *Eigenvalues and eigenvectors: the standard eigenvalue problem* 793

A.4 *Matrices and linear operators* 802

*References* 808

*Further reading* 808

**B Some considerations on the assessment of vibration intensity 809**

B.1 *Introduction* 809

B.2 *Definitions* 809

*References* 814

*Further reading* 814

*Index* 815
