

## Table of contents

Preface	XXI
Conference organization	XXIII
List of reviewers	XXVII

### WM session

#### ***WM-2 Probabilistic and statistical predication (I)***

WM-2-1 Prediction of bridge live load effects based on the theory of extremes <i>M. Gindy &amp; H.H. Nassif</i>	3
WM-2-2 The fragility curves method: A simple procedure in the structural lifetime prediction <i>E. Garavaglia</i>	5
WM-2-3 Statistical properties of self-affine fractal dimension of ground motions and geotechnical conditions <i>T. Nakamichi, T. Takahashi &amp; T. Hida</i>	9

#### ***WM-3 Random Vibration (I)***

WM-3-1 Frequency-domain analysis of nonlinear wave effects and inundation effects on offshore platform response <i>X.Y. Zheng &amp; T. Moan</i>	13
WM-3-2 Evolutionary spectrum approach for ground motion generation <i>P. Varpasuo</i>	15
WM-3-3 Efficient path integration by FFT <i>E. Mo &amp; A. Naess</i>	17

#### ***WM-4 OS15 Theoretical improvement for health monitoring***

WM-4-1 Application of the Bayesian approach in crack detection utilizing spatial wavelet transform <i>H.F. Lam &amp; C.T. Ng</i>	19
WM-4-2 Information-based formulation for probabilistic concrete shrinkage models updating <i>W. Raphael, S. Daher, R. Faddoul &amp; A. Chateauneuf</i>	23
WM-4-3 Impedance-based structural health monitoring using an outlier analysis <i>S. Park, C.-B. Yun &amp; D.J. Inman</i>	25

## **WM-5 OS21 Developments in the JCSS**

WM-5-1 Public risk acceptability criteria: From case-studies towards a general model code <i>R. Rackwitz &amp; A. Lentz</i>	31
WM-5-2 Principles of risk assessment of engineered systems <i>M.H. Faber, M.A. Maes, J.W. Baker, T. Vrouwenvelder &amp; T. Takada</i>	33
WM-5-3 Practical methods of structural reliability <i>A.C.W.M. Vrouwenvelder &amp; M.H. Faber</i>	35

## **WA session**

### **WA-2 Computational methods in reliability and risk assessment**

WA-2-1 Development of evaluation method for failure probability from residual life evaluation using Bayes' theorem <i>S. Okajima, S. Izumi &amp; S. Sakai</i>	39
WA-2-2 Response surface with random factors for seismic fragility of RC frames <i>N. Buratti, B. Ferracuti &amp; M. Savoia</i>	41
WA-2-3 An adaptive response surface method based on double weighted regression <i>X.S. Nguyen, F. Duprat, A. Sellier &amp; G. Pons</i>	43
WA-2-4 Statistical mechanics of reliability of brittle and quasibrittle structures and size-dependent of understrength safety factors: From nano to macro <i>S.-D. Pang &amp; Z. P. Bažant</i>	45
WA-2-5 Matrix-based system reliability method and applications to bridge networks <i>W.-H. Kang, J. Song &amp; P. Gardoni</i>	47
WA-2-6 Characterization of risk, hazard and vulnerability in natural disasters <i>Y. Fujino &amp; M. Abe</i>	49

### **WA-3 OS13 Life-cycle cost**

WA-3-1 Stochastic DCF method in seismic measure for water supply systems <i>M. Hoshiya &amp; K. Yamamoto</i>	53
WA-3-2 Condition-reliability aspects for the probabilistic lifetime optimization of structures <i>A. Strauss, D.M. Frangopol &amp; K. Bergmeister</i>	55
WA-3-3 Sustainable infrastructure development for Guizhou province in southwest China: A life cycle assessment approach <i>E. Ou, R. Corotis &amp; Y. Xi</i>	57
WA-3-4 Preferred seismic design levels for different risk attitudes <i>K. Goda &amp; H.P. Hong</i>	59
WA-3-5 On structural performance vs. societal economic growth <i>K. Nishijima &amp; M.H. Faber</i>	61
WA-3-6 Repair efficiency and timing of maintenance for RC structures subjected to spatially variable corrosion damage <i>J.A. Mullard &amp; M.G. Stewart</i>	63

#### **WA-4 OS15 Health monitoring for bridges**

WA-4-1 Application of total least squares algorithm for damage identification of bridges under a moving vehicle <i>C.W. Kim &amp; M. Kawatani</i>	65
WA-4-2 Towards Health Monitoring of bridge systems using strong motion data <i>Y. Arici &amp; K.M. Mosalam</i>	69
WA-4-3 Seismic protection of base isolated bridge using adaptive passive control system <i>H.J. Jung, K.M. Choi &amp; S.W. Cho</i>	71
WA-4-4 Probabilistic fatigue load spectra for riveted railway bridges <i>B.M. Imam, T.D. Righiniotis &amp; M.K. Chryssanthopoulos</i>	73
WA-4-5 Structural Health Monitoring (SHM) system implemented in Sorraia river bridge <i>J.C. Matos, H. Sousa, J.A. Figueiras &amp; J.R. Casas</i>	75
WA-4-6 SHM development using system reliability <i>M. Susoy, F.N. Catbas &amp; D.M. Frangopol</i>	79

#### **WA-5 OS3 Reliability analysis and design in geotechnical engineering (1)**

WA-5-1 Geotechnical probabilistic analysis using collocation-based stochastic response surface method <i>K.K. Phoon &amp; S.P. Huang</i>	83
WA-5-2 Approximate reliability-based design with general geotechnical models by stochastic simulation <i>J. Ching &amp; T.-R. Chen</i>	87
WA-5-3 On conditional estimation accuracy of spatial average of soil properties and sample size <i>Y. Honjo &amp; B. Setiawan</i>	89
WA-5-4 Updating reliability of a geotechnical system using monitoring data <i>J. Ching &amp; Y.-H. Hsieh</i>	91
WA-5-5 Reliability-based design of the foundation of an offshore wind energy converter using the Single Surface Hardening Model <i>A. Kisse &amp; K. Lesny</i>	93
WA-5-6 A general procedure to determine load and resistance factors for geotechnical structures by Monte Carlo simulation <i>T.C. Kieu Le &amp; Y. Honjo</i>	95

#### **WA-6 Risk management**

WA-6-1 Evaluation method of human cognitive ability based on psychometric measurement and statistical estimation <i>H. Hayashi, M. Nakagawa &amp; H. Nakayasu</i>	101
WA-6-2 Macro and micro-zone snow load models for probabilistic design <i>D.V. Rosowsky &amp; K.H. Lee</i>	103
WA-6-3 Visual attention and human reliability by visual motion study at driving simulator <i>H. Hayashi, T. Yagi, T. Miyoshi &amp; H. Nakayasu</i>	105

WA-6-4 An evacuation plan from a fire following earthquake <i>T. Kanamori &amp; T. Koike</i>	109
WA-6-5 Security risks and cost-effectiveness of risk mitigation strategies for the protection of buildings against terrorist threats <i>M.G. Stewart &amp; M.D. Netherton</i>	111
WA-6-6 Probability-based vulnerability and criticality assessment of a highway bridge subjected to terrorist attack <i>M.T. Bensi &amp; B. Bhattacharya</i>	113

## **WE session**

### ***WE-2 Stochastic finite elements***

WE-2-1 Sensitivity analysis of the drying model on the delayed strain of concrete in containment vessel with a non intrusive stochastic response surface method <i>M. Berveiller, Y.L. Pape &amp; B. Sudret</i>	117
WE-2-2 Application of the spectral stochastic finite element method to continuum damage modelling with softening behaviour <i>C.V. Verhoosel &amp; M.A. Gutiérrez</i>	119
WE-2-3 Bayesian finite elements <i>T. Haukaas, P. Gardoni &amp; A. Behamzadeh</i>	121
WE-2-4 Identification of random field properties from bending tests on timber beams <i>C. Bucher, V. Ho &amp; M.D. Pandey</i>	123
WE-2-5 Seismic reliability of frame structures emphasizing uncertainty in the frequency content <i>J. Huh &amp; A. Haldar</i>	125
WE-2-6 SFE analysis of a steel connection component <i>N. Rhayma, Ph. Bressollette, J. Baroth &amp; A. Bouchair</i>	127

### ***WE-3 OS13 Life-cycle cost & OS 9 Reliability of deteriorating structures***

WE-3-1 Time-variant reliability assessment for corroded marine structures with non-linear behavior <i>M. Cazuguel &amp; J.Y. Cognard</i>	131
WE-3-2 Structural reliability of RC structures subject to biodeterioration, corrosion and concrete cracking <i>E. Bastidas-Arteaga, M. Sánchez-Silva &amp; A. Chateauneuf</i>	133
WE-3-3 Stochastic analysis of the multi-dimensional effect of chloride ingress into reinforced concrete <i>C. Frier &amp; J.D. Sørensen</i>	135
WE-3-4 Time dependent structural reliability of reinforced concrete beams subjected to corrosion attack <i>K. Bhargava, Y. Mori, A.K. Ghosh &amp; S. Ramanujam</i>	137
WE-3-5 Cost-benefit analysis of maintenance interventions for deteriorating structures <i>S. Higuchi &amp; M. Macke</i>	141

WE-3-6 Comparing efficiency of systematic and conditional maintenance for randomly ageing components <i>E. Sheils, F. Schoefs, D. Breyse &amp; A. O'Connor</i>	143
<b>WE-4 OS15 New methodology for health monitoring</b>	
WE-4-1 An image analysis based damage classification methodology <i>V. Pakrashi, A. O'Connor &amp; F. Schoefs</i>	147
WE-4-2 Multi-pattern functions classification Neural Network using hybrid learning system of PSO and Back Propagation <i>R. Katade, T. Sakuda &amp; S. Katsuki</i>	149
WE-4-3 Instantaneous reference-free crack detection based on the polarization characteristics of piezoelectric materials <i>H. Sohn &amp; S.B. Kim</i>	153
WE-4-4 Statistical properties of member ductility demanded for deformation capacity of steel frames under seismic loads <i>K. Yamazaki &amp; H. Idota</i>	155
WE-4-5 Optimum absorber parameters for linked structures with extensive mass-ratio and frequency-ratio <i>T. Takada &amp; R. Iwasaki</i>	159
WE-4-6 Damage assessment of bridge structures using structural equation modeling <i>H. Furuta, H. Mori, M. Jido &amp; T. Izawa</i>	161
<b>WE-5 OS3 Reliability analysis and design in geotechnical engineering (2)</b>	
WE-5-1 Risk evaluation and reliability-based design for improvement of earth-fill dams <i>S. Nishimura &amp; K. Matsuura</i>	165
WE-5-2 Ultimate capacity of pile foundation on spatially random cohesive soil <i>S. Haldar &amp; G. L. Sivakumar Babu</i>	167
WE-5-3 Spatial variability of undrained shear strength of marine clay from geostatistical approach <i>G.L. Yoon, K.W. Lee, Y.S. Chae, D.H. Kim &amp; H.Y. Kim</i>	169
WE-5-4 Updating spatial variability uncertainties with in-situ test data <i>J. Ching, Y.-C. Chen, C.-F. Chang, C.-T. Chin &amp; J.-R. Chen</i>	171
WE-5-5 Effects of spatial variability and statistical estimation error in prediction of settlement of a shallow foundation <i>Y. Honjo, M.N. Jililati &amp; J. Ishino</i>	173
<b>WE-6 Risk analysis</b>	
WE-6-1 Vulnerability and integrity of structural systems <i>J. Agarwal &amp; G.N. Liu</i>	177
WE-6-2 Robustness of structural systems – a new focus for the Joint Committee on Structural Safety (JCSS) <i>T.D.G. Canisius, J.D. Sørensen &amp; J.W. Baker</i>	179

WE-6-3 Structural redundancy and robustness measures and their use in assessment and design <i>M. Ghosn &amp; D.M. Frangopol</i>	181
WE-6-4 Multi-hazard risk assessment for performance-based engineering of wood-frame residential construction <i>Y. Li &amp; B.R. Ellingwood</i>	183
WE-6-5 Statistical assessment of breach of irrigation tank embankment due to downpour <i>A. Kobayashi, Y. Yamamoto, S. Aoyama, T. Oka &amp; K. Inoue</i>	185
WE-6-6 Reliability-based stability analysis and risk assessment for rock slides of Ramnefjell <i>H.S.B. Düzgün &amp; E. Grimstad</i>	189
 <b>Keynote</b>	
Recent progress in the development of mathematical-probabilistic corrosion models for long-term life assessment of steel infrastructure <i>R.E. Melchers</i>	191
 <b>TM session</b>	
 <b><i>Probabilistic and statistical predication (2)</i></b>	
TM-2-1 High-dimensional integration formulas for efficient SFE methods <i>Ph. Bressollette, J. Baroth, C. Chauvière &amp; M. Fogli</i>	195
TM-2-2 Probabilistic seismic demand models and fragility estimates for reinforced concrete bridges with two-column bents <i>J. Zhong, P. Gardoni, D.V. Rosowsky &amp; T. Haukaas</i>	197
TM-2-3 Probabilistic analysis of industrial accident damages using risk curve <i>S. Hanayasu, K. Sekine &amp; K. Ohdo</i>	199
TM-2-4 The extremal index of a dependent stationary pulse load process <i>B. Bhattacharya</i>	201
TM-2-5 Probabilistic precipitation map by the extreme value model based on meteorological data <i>M. Shinoda &amp; Y. Honjo</i>	203
 <b><i>Random vibration (2)</i></b>	
TM-3-1 Sub-critical excitations for nonlinear hysteretic systems <i>S.K. Au</i>	207
TM-3-2 Protection from overturn of furniture and antique during earthquake excitation <i>S. Aoki, Y. Nakanishi, T. Nishimura, K. Tominaga, M. Inagaki, T. Otaka, M. Kanazawa, S. Kawaguchi &amp; T. Furuta</i>	209
TM-3-3 Simulation of earthquake ground motion using wavelet multiresolution analysis and nonstationary Kanai-Tajimi model <i>G.G. Amiri &amp; A. Bagheri</i>	211
TM-3-4 Random vibration of linear oscillators moving on rough beams <i>G. Muscolino, A. Palmeri &amp; A. Sofi</i>	213

TM-3-5 Extension of spectral characteristics to complex-valued non-stationary random processes and applications in structural reliability <i>M. Barbato &amp; J.P. Conte</i>	215
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

### ***Codified design and code calibration***

TM-4-1 Reliability calibration of Chinese hydraulic gates design code SL74-95 <i>D.Q. Li &amp; S.B. Wu</i>	219
TM-4-2 Probabilistic verification and optimization of structural durability <i>M. Holický</i>	221
TM-4-3 Code calibration allowing for reliability differentiation and production quality <i>M. Holický, J. Marková &amp; H. Gulvanessian</i>	223
TM-4-4 Optimum seismic design contour maps <i>H.P. Hong</i>	225
TM-4-5 Combination coefficients for modal pushover analysis <i>P. Cacciola, P. Colajanni &amp; B. Potenzzone</i>	227

### ***OS1 Risk assessment and management of geohazard***

TM-5-1 Fully probabilistic analysis of liquefaction potential for performance-based earthquake engineering design <i>C.H. Juang, D.K. Li &amp; B.G. Nielson</i>	231
TM-5-2 Rainfall-induced landslide risk analysis along mountain roads in central Taiwan <i>J. Ching, H.-C. Liao &amp; T.-R. Chen</i>	233
TM-5-3 Early warning systems for large earthquakes: Classification of near-source and far-source stations by using the Bayesian model class selection <i>M. Yamada, T.H. Heaton &amp; J.L. Beck</i>	235
TM-5-4 Effects of uncertainty on offshore platform due to wave and seismic forces <i>K. Kawano, Y. Kimura, S. Kidouchi &amp; M. Simotamari</i>	237
TM-5-5 Random field models for irregular masonry structures <i>G. Falsone &amp; M. Lombardo</i>	239

### ***OS14 Fuzzy analysis***

TM-6-1 Identification of rock discontinuity sets using fuzzy spectral clustering of discontinuity orientations <i>R. Jimenez-Rodriguez</i>	243
TM-6-2 Research on intelligent fuzzy optimal and active control system of buildings with biaxial eccentricity <i>A. Tani, N. Kouzue, H. Kawamura &amp; Y. Yamabe</i>	245
TM-6-3 Fuzzy structural analysis in view of numerical efficiency <i>M. Liebscher, M. Beer, B. Möller &amp; W. Graf</i>	249
TM-6-4 Recognition of cracks on concrete structures using two-dimensional Gabor function <i>M. Hirokane, I. Hayashi, H. Furuta, H. Takiuchi &amp; I. Nakajima</i>	251

TM-6-5 Fuzzy stochastic finite element analysis <i>J.-U. Sickert, B. Möller &amp; W. Graf</i>	253
--------------------------------------------------------------------------------------------------	-----

## TA session

### ***OS12 Computational stochastic mechanics (1)***

TA-2-1 Quasi random numbers in stochastic finite element analysis – application to global sensitivity analysis <i>B. Sudret, G. Blatman &amp; M. Berveiller</i>	257
TA-2-2 Support vector machine for efficient subset simulations: <sup>2</sup> SMART method <i>F. Deheeger &amp; M. Lemaire</i>	259
TA-2-3 Bayesian based reliability updating approach with application of support vector machine <i>Y. Cao, M. Noori, F.G. Yuan, T. Yokoi &amp; A. Masuda</i>	261
TA-2-4 Fast Monte Carlo simulation for stochastic response analysis under stationary noise having a specified power spectrum <i>J. Ogawa &amp; H. Tanaka</i>	263
TA-2-5 Importance sampling method based upon the Meyer theorem for stochastic systems driven by a generalized noise <i>H. Tanaka &amp; N. Tanji</i>	265
TA-2-6 Reliability estimation by local polynomial chaos approximations <i>C. Proppe</i>	267

### ***Optimal inspection & Maintenance strategies (1)***

TA-3-1 Optimizing spatial sampling of infrastructure condition inspection <i>R.G. Mishalani &amp; L. Gong</i>	271
TA-3-2 Application of NDI detection quality on corrosion-fatigue inspections for steel bridges <i>H.Y. Chung &amp; L. Manuel</i>	273
TA-3-3 Optimum inspection interval analysis for sewage sludge dryer <i>Y. Shumuta, A. Ozaki &amp; Y. Suga</i>	275
TA-3-4 Spatial dependence of Receiver Operating Characteristic curves for risk based inspection of corroded structures: Application to on-pile wharf <i>F. Schoefs, A. Clément, J.B. Memet &amp; A. Nouy</i>	277
TA-3-5 Maintenance and inspection strategies of essential components of ship propulsion plants based on their failure distributions <i>Y. Song &amp; H. Shiihara</i>	279

### ***Reliability-based optimal design (1)***

TA-4-1 Estimation of the design wave height for offshore structures transportation <i>J.L. Alamilla, D. Campos, C. Ortega, J.L. Morales &amp; A. Soriano</i>	283
TA-4-2 Reliability-based seismic design of steel rigid-frame piers considering its geometric shapes <i>Y. Nomura, M. Kawatani &amp; S. Kato</i>	285

TA-4-3 Application of reliability-based design method to circular arc slip failure of breakwaters <i>R. Ozaki &amp; T. Nagao</i>	287
TA-4-4 Design method for caisson-type breakwaters covered with wave-dissipating blocks considering LCC during execution <i>T. Yoshioka &amp; T. Nagao</i>	289
TA-4-5 Dependency of the bearing capacity of a shallow foundation on the reliability of the geotechnical subsoil model <i>G. Russo &amp; S. Aversa</i>	291
TA-4-6 Efficient simulation-based optimization for optimal reliability problems <i>A.A. Taflanidis &amp; J.L. Beck</i>	293

### ***OS3 Reliability analysis and design in geotechnical engineering (3)***

TA-5-1 Design approaches of Eurocode 7 and their effect on the safety of shallow foundations <i>K. Lesny</i>	297
TA-5-2 Numerical analysis of shallow foundations – Influence of partial material factors according to EUROCODE 7-1 <i>P. Koudelka</i>	299
TA-5-3 Serviceability analysis: From single pile to pile group and pile system <i>Y. Xu, L.M. Zhang &amp; S.M. Dasaka</i>	301
TA-5-4 From statistical interpretation of CPTs to reliability-based design of CFA piles <i>G. Vessia, C. Cherubini, M. Nardelli &amp; A. Mandolini</i>	303
TA-5-5 Case study of reliability-based design for harbor structure using Rosenblueth method <i>H. Suzuki</i>	307

### ***Decision making***

TA-6-1 Study on the broadcasting system of integrated disaster risks to common people <i>Y. Yoshioka &amp; N. Sato</i>	311
TA-6-2 A method to determine the total risk exposure in large infrastructure projects <i>L. Olsson, R. Sturk, T. Hansson &amp; J. Johansson</i>	313
TA-6-3 Assessment of earthquake insurance rates for the Turkish catastrophe insurance pool <i>A. Deniz &amp; M.S. Yüçemen</i>	315
TA-6-4 Robustness of infrastructures subject to rare events <i>M. Schubert &amp; M.H. Faber</i>	317
TA-6-5 Building risk management for earthquakes and fires <i>A. Kusaka, H. Ishida &amp; K. Torisawa</i>	319
TA-6-6 Multi-attribute selection from alternative designs of a protective structure in the presence of epistemic uncertainty in the failure-to-protect probability <i>E.R. Vaidogas &amp; K. Hayashi</i>	321

## TE session

### ***OS12 Computational stochastic mechanics (2)***

TE-2-1 Stochastic nonlinear analysis of concrete structures – Part I: From simulation of experiment and parameter identification to reliability assessment <i>D. Novák, M. Vořechovský, D. Lehký, K. Bergmeister, R. Pukl &amp; V. Červenka</i>	325
TE-2-2 Stochastic nonlinear analysis of concrete structures – Part II: Application to fiber-reinforced concrete facade panels <i>Z. Keršner, D. Novák, L. Řoutil &amp; J. Podroužek</i>	327
TE-2-3 Stochastic nonlinear analysis of concrete structures – Part III: Application to bridges <i>A. Strauss, K. Bergmeister, R. Wendner, S. Hoffmann, U. Santa, D. Novák &amp; R. Pukl</i>	329
TE-2-4 Inverse statistical FEM analysis for the assessment of existing structures <i>A. Strauss, K. Bergmeister &amp; D.M. Frangopol</i>	331
TE-2-5 An interpolation of temperatures for heat insulator design using stochastic procedure <i>A. Sutoh, T. Mikami &amp; T. Sato</i>	333
TE-2-6 Stochastic analysis of actively controlled hysteretic structure with fuzzy-optimal control logic <i>T. Mochio</i>	335

### ***Optimal inspection & Maintenance Strategies (2)/Statistical Damage & Deterioration Modeling and Analysis (1)***

TE-3-1 Risk analysis and reliability of repaired concrete quays <i>Y. Billard, O. Bernard, M. Lasne, B. Capra, F. Schoefs &amp; J. Boéro</i>	339
TE-3-2 Integrated maintenance optimization of LWRs based on PFM analysis <i>S. Yoshimura, K. Furuta, Y. Isobe, M. Sagisaka, M. Noda, T. Wada &amp; H. Akiba</i>	341
TE-3-3 Importance measures supporting risk-based management of flood defenses <i>F.A. Buijs, J.W. Hall &amp; P.B. Sayers</i>	343
TE-3-4 Probabilistic lifetime assessment of reinforced concrete structures under high-cycle fatigue <i>T. Pfister, Y.S. Petryna &amp; F. Stangenberg</i>	347

### ***Reliability-based optimal design (2)***

TE-4-1 Performance-based design of a Shape Memory Alloy base isolator <i>F. Casciati, L. Faravelli &amp; K. Hamdaoui</i>	351
TE-4-2 Optimal robust design via SMA dissipative devices <i>S. Casciati &amp; K. Hamdaoui</i>	355
TE-4-3 Reliability enhancement for dynamic positioning systems based on riser angle measurements <i>B.J. Leira &amp; G. Gundersen</i>	357
TE-4-4 Study on influence of shear stiffness of footboard on performance of scaffolds <i>K. Ohdo &amp; S. Takanashi</i>	359
TE-4-5 Socially optimized engineered safety: The Life Quality Index <i>N.C. Lind, M.D. Pandey &amp; J.S. Nathwani</i>	361

TE-4-6 Fatigue reliability-based assessment of welded joints applying consistent fracture mechanics formulations	363
<i>T. Moan &amp; E. Ayala-Uraga</i>	

### **OS18 Seismic risk (1)**

TE-5-1 The application of time-predictable characteristic earthquake model for evaluation of design earthquake in Taiwan	367
<i>Y.-W. Chang, W.-Y. Jean, K.-L. Wen &amp; C.-H. Loh</i>	

TE-5-2 Correlation property for generation of waveforms	371
<i>M. Ohbuchi, Y. Masuda &amp; T. Takada</i>	

TE-5-3 Uncertainty analysis in fragility assessment of reinforced concrete frames designed for regions of low-to-moderate seismicity	373
<i>O.C. Celik &amp; B.R. Ellingwood</i>	

TE-5-4 Seismic design of woodframe residential structures for lifetime loss minimization: A Bayesian approach	375
<i>S. Pei &amp; J.W. van de Lind</i>	

TE-5-5 Effect of parameter uncertainty on the seismic fragility of retrofitted bridges	377
<i>J.E. Padgett &amp; R. DesRoches</i>	

TE-5-6 Seismic risk assessment and expected damage evaluation of railway viaduct	379
<i>H. Yoshikawa, T. Ohtaki, H. Hattori, Y. Maeda, A. Noguchi &amp; H. Okada</i>	

### **OS16 Reliability analysis**

TE-6-1 Optimizing RC bridge inspection/repair schedules with pre-posterior decision making	381
<i>Q. Qin &amp; J.X. Wang</i>	

TE-6-2 An investigation on the limitations and applicability of the fourth-moment method for structural reliability assessment	385
<i>Z.-H. Lu &amp; Y.G. Zhao</i>	

TE-6-3 Investigation on the story mechanisms of frames using fishbone-shaped model	387
<i>W.C. Pu &amp; Y.G. Zhao</i>	

TE-6-4 Evaluation and Bayesian dynamic prediction of structural performance under freeze-thaw condition	389
<i>W. Jian, L. Xila &amp; T. Guangpu</i>	

TE-6-5 Application of third moment method to time-dependent reliability of R.C. structures under chlorination and carbonation	391
<i>Y.G. Zhao &amp; W.Q. Zhong</i>	

TE-6-6 First passage probability of structures under non-Gaussian stochastic behavior	393
<i>H. Jun, K.X. Jian &amp; M.X. Xuan</i>	

### **Keynote**

Uncertainty quantification and adaptive prediction of underground contaminants	395
<i>M. Shinozuka &amp; S.R. Chaudhuri</i>	

## FM session

### ***Bayesian information processing and uncertainly analysis (I)***

FM-2-1 Development of bridge component limit states using bayesian updating <i>B.G. Nielson &amp; R. DesRoches</i>	399
FM-2-2 Comparison of Markov chain Monte Carlo simulation and a FORM-based approach for Bayesian updating of mechanical models <i>F. Perrin, B. Sudret, M. Pendola &amp; E. de Rocquigny</i>	401
FM-2-3 Bayesian updating for site-specific attenuation relation with limited number of data <i>M. Wang &amp; T. Takada</i>	403
FM-2-4 Handling uncertainties in structural fragility by means of the Bayesian bootstrap resampling <i>E.R. Vaidogas</i>	407
FM-2-5 Value of information analysis in earthquake risk management <i>Y.Y. Bayraktarli &amp; M.H. Faber</i>	409

### ***Performance-based engineering (I)***

FM-4-1 Performance of non-seismically designed PR moment frames under earthquake loading <i>K. Kinali &amp; B.R. Ellingwood</i>	413
FM-4-2 Methodology for Performance-Based Seismic Design using probabilistic system identification <i>J.W. van de Lindt, H. Liu &amp; S. Pei</i>	415
FM-4-3 Damage assessment of steel moment frames by enhanced uncoupled modal response history analysis <i>Q. Li &amp; B.R. Ellingwood</i>	417
FM-4-4 Damage evaluation on nonlinear SSI systems due to seismic forces <i>Y. Kimura, K. Kawano &amp; Y. Nakamura</i>	419
FM-4-5 Probable loss model and spatial distribution of damage for probabilistic financial risk assessment of structures <i>B.A. Bradley, R.P. Dhakal &amp; J.B. Mander</i>	423

### ***Lifeline risk assessment***

FM-5-1 Impact of infrastructure interdependency and spatial correlation of seismic intensities on performance assessment of a water distribution system <i>T. Adachi &amp; B.R. Ellingwood</i>	427
FM-5-2 The scenario simulation of electric power systems during and after devastating earthquakes <i>G.-Y. Liu, Y.-J. Wang &amp; C.-W. Liu</i>	429
FM-5-3 Reliability assessment of electrical power distribution systems under natural hazards <i>L. Dueñas-Osorio &amp; B.R. Ellingwood</i>	431
FM-5-4 Performance of water lifeline network with damaged node structures under seismic risk <i>F. Mochizuki &amp; T. Koike</i>	433
FM-5-5 Seismic reliability assessment of infrastructure systems based on fragility models <i>D. Straub &amp; A. Der Kiureghian</i>	435

**Reliability theory and applications (1)**

FM-6-1 Reliability analysis of cable-stayed bridge considering lifecycle earthquakes and different phase characteristics <i>A. Furukawa, H. Otsuka, Y. Suzuki &amp; T. Betsumiya</i>	439
FM-6-2 Recent developments in the area of probabilistic design of timber structures <i>J. Köhler &amp; J.D. Sørensen</i>	441
FM-6-3 Fatigue reliability and effective turbulence models in wind farms <i>J.D. Sørensen, S. Frandsen &amp; N.J. Tarp-Johansen</i>	443
FM-6-4 Reliability assessment of earth dams <i>Z. Mrabet, M.R. Elouni &amp; K. Kheder</i>	445
FM-6-5 Assessment of traffic loads in car parks using renewal processes <i>M. Sýkora</i>	447

**FA session**

**Bayesian information processing and uncertainty analysis (2)**

FA-2-1 Probabilistic soil classification based on Cone Penetration Tests <i>B.-C. Jung, P. Gardoni &amp; G. Biscontin</i>	451
FA-2-2 A versatile stochastic simulation method for Bayesian model updating and model class selection <i>J. Ching &amp; Y.-C. Chen</i>	453
FA-2-3 Bayesian updating of predictions of long-term deflections of concrete bridges <i>S.G. Reid &amp; T.B. Nguyen</i>	455
FA-2-4 Bayesian updating of the long-term creep strains in concrete containment vessels using a non intrusive stochastic finite element method <i>M. Berveiller, Y.L. Pape, B. Sudret &amp; F. Perrin</i>	457
FA-2-5 Hierarchical Bayes methods involving dependent condition states <i>M.A. Maes &amp; K.W. Breitung</i>	459
FA-2-6 Correlation Measures: Robustness and performance in simulations <i>S. Sriramula, D. Menon &amp; A. Meher Prasad</i>	461

**Statistical damage and deterioration modeling and analysis (2)**

FA-3-1 Modeling statistical size effect in quasibrittle structures by computational stochastic fracture mechanics <i>M. Vořechovský</i>	465
FA-3-2 Characterization of pitting corrosion using spatial statistics <i>J. López De La Cruz &amp; M.A. Gutiérrez</i>	467
FA-3-3 Probabilistic capacity models for corroding strands in Post-Tensioned bridges with voided tendons <i>R.G. Pillai, P. Gardoni, M. Hueste, K. Reinschmidt &amp; D. Trejo</i>	469
FA-3-4 The asymptotic properties of strength and compliance of single-walled carbon nanotubes containing random defects <i>B. Bhattacharya &amp; Q. Lu</i>	471

FA-3-5 Study of time dependent reliability of old man-made slopes <i>J. Zhang &amp; W.H. Tang</i>	473
------------------------------------------------------------------------------------------------------	-----

FA-3-6 Pitting corrosion – probabilistic modeling and its effect on the ultimate strength of steel plates subjected to uni-axial compression <i>T. Nakai &amp; N. Yamamoto</i>	475
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

### ***Performance-based engineering (2)***

FA-4-1 Drift demand of different structural systems subjected to near-fault ground motions <i>S.-H. Chao &amp; C.-H. Loh</i>	481
---------------------------------------------------------------------------------------------------------------------------------	-----

FA-4-2 Study on seismic performance of timber structure in snowy region <i>T. Chiba, T. Tomabechei, T. Takahashi &amp; T. Uematsu</i>	483
------------------------------------------------------------------------------------------------------------------------------------------	-----

FA-4-3 Seismic hazard analysis for alternative measures of ground motion intensity employing stochastic simulation methods <i>F. Jalayer &amp; P. Franchin</i>	485
-------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

FA-4-4 Global seismic reliability analysis of structures with FORM <i>S.D. Koduru &amp; T. Haukaas</i>	489
-----------------------------------------------------------------------------------------------------------	-----

FA-4-5 Influence of parameter uncertainties on the seismic performance of oscillators via SPO2IDA <i>D. Vamvatsikos</i>	481
----------------------------------------------------------------------------------------------------------------------------	-----

### ***OSI8 Seismic risk (2)***

FA-5-1 Numerical assessment of damage state of segmented pipelines due to permanent ground deformation <i>V.G. Terzi, M.N. Alexoudi &amp; T.N. Hatzigogos</i>	495
------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

FA-5-2 Reliability-based seismic analysis of structures using Kanda function <i>S.H.C. Santos, L.E. Vaz &amp; M.E.S. Albuquerque</i>	499
-----------------------------------------------------------------------------------------------------------------------------------------	-----

FA-5-3 Correlation of ground motion intensity parameters used for predicting structural and geotechnical response <i>J.W. Baker</i>	501
----------------------------------------------------------------------------------------------------------------------------------------	-----

FA-5-4 Determination of maximum probable earthquakes in disaster reduction plans <i>C.-H. Yeh</i>	503
------------------------------------------------------------------------------------------------------	-----

FA-5-5 Seismic vulnerability assessment of buildings functionally connected in university campus <i>Y. Hiraiwa &amp; T. Takada</i>	505
---------------------------------------------------------------------------------------------------------------------------------------	-----

FA-5-6 Extending the USGS National Seismic Hazard Maps and ShakeMaps to probabilistic building damage and risk maps <i>N. Luco &amp; E. Karaca</i>	509
-------------------------------------------------------------------------------------------------------------------------------------------------------	-----

### ***Reliability theory and applications (2)***

FA-6-1 Verifications of a novel structural health assessment technique <i>A. Haldar, R. Martinez-Flores &amp; H. Katkhuda</i>	513
----------------------------------------------------------------------------------------------------------------------------------	-----

FA-6-2 Reliability-based optimization of an existing $n$ -unit series system with dependent components and finite renewal times <i>A.E. Joanni &amp; R. Rackwitz</i>	515
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

FA-6-3 Full probabilistic approach to seismic reliability assessment of RC frame structures <i>M. Bianchini, P.P. Diotallevi &amp; L. Landi</i>	517
----------------------------------------------------------------------------------------------------------------------------------------------------	-----

FA-6-4 Probabilistic estimation of fluctuations in the dynamic characteristics of a seismically isolated building <i>T. Saito &amp; M. Shiraishi</i>	519
---------------------------------------------------------------------------------------------------------------------------------------------------------	-----

FA-6-5 Effect of variability of structural calculations on seismic safety <i>K. Motoi &amp; J. Kanda</i>	521
-------------------------------------------------------------------------------------------------------------	-----

## FE session

### *Simulation methods*

FE-2-1 Estimation of extreme response of dynamic structural systems subjected to stochastic loading by direct Monte Carlo simulation <i>A. Naess &amp; O. Gaidai</i>	525
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

FE-2-2 Simulation of simply cross correlated random fields by series expansion methods <i>M. Vořechovský</i>	527
-----------------------------------------------------------------------------------------------------------------	-----

FE-2-3 Reliability-based analysis of strip footings using response surface methodology <i>D.S. Youssef Abdel Massih &amp; A.-H. Soubra</i>	529
-----------------------------------------------------------------------------------------------------------------------------------------------	-----

FE-2-4 Adaptive response surface approach for reliability analysis using advanced meta-models <i>T. Most &amp; C. Bucher</i>	533
---------------------------------------------------------------------------------------------------------------------------------	-----

FE-2-5 Simulation of Multi-dimensional non-Gaussian fields using Karhunen-Loève expansion <i>K.K. Phoon, S.T. Quek &amp; L.B. Li</i>	535
-----------------------------------------------------------------------------------------------------------------------------------------	-----

FE-2-6 A stochastic model for earthquake ground motion with separable temporal and spectral nonstationarity <i>A. Der Kiureghian &amp; S. Rezaeian</i>	537
-----------------------------------------------------------------------------------------------------------------------------------------------------------	-----

### *Statistical damage and deterioration modeling and analysis (3)*

FE-3-1 Stochastic analysis of delamination in fibre metal laminates using a spectral stochastic interface element <i>D. B. Chung, M.A. Gutiérrez &amp; C.D. Autheur</i>	541
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

FE-3-2 Influence of spatial and temporal variability of the material properties on the assessment of a RC corroded bridge in marine environment <i>D. Breysse, S. Yotte &amp; A. Pova</i>	543
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

FE-3-3 Assessment updating of corrosion accounting uncertainties in modelling and NDT measurements <i>D. Breysse, F. Schoefs, M. Salta &amp; S. Bonnet</i>	545
---------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

FE-3-4 Fatigue damage under combined high and low frequency Gaussian load processes considering a two-slope SN curve <i>Z. Gao &amp; T. Moan</i>	547
-----------------------------------------------------------------------------------------------------------------------------------------------------	-----

FE-3-5 Modeling of uncertainties associated with structural deterioration <i>X.-X. Yuan &amp; M.D. Pandey</i>	549
------------------------------------------------------------------------------------------------------------------	-----

FE-3-6 Application of a time series based damage detection algorithm to the Taiwanese benchmark experiment <i>H. Noh, K.K. Nair, A.S. Kiremidjian &amp; C.-H. Loh</i>	551
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

### ***Performance-based engineering (3)***

FE-4-1 Partially compressive performances of orthotropic wood due to the grain angles <i>H. Tanahashi, H. Shimizu &amp; Y. Suzuki</i>	553
FE-4-2 Performance-based design of a wind turbine under typhoon and earthquake loads <i>L.E.O. Garciano &amp; T. Koike</i>	559
FE-4-3 Performance-based wind design for footbridges: Evaluation of pedestrian comfort <i>E. Sibilio &amp; M. Ciampoli</i>	561
FE-4-4 Analysis of reliability for deep excavation engineering <i>FK. Huang &amp; G.S. Wang</i>	563
FE-4-5 Towards generalized fragility functions of RC frame structures containing URM infill walls <i>A. Hashemi &amp; K.M. Mosalam</i>	565
FE-4-6 A methodology for determination of efficient earthquake bins for Performance Based Seismic Design <i>T. Trombetti, S. Silvestri, D. Malavolta &amp; G. Gasparini</i>	569

### ***OS18 Seismic risk (3)***

FE-5-1 Optimal strategy for upgrading existing non-conforming wooden houses <i>Y. Mori, T. Yamaguchi &amp; H. Idota</i>	571
FE-5-2 Seismic hazard assessments by applying scenario earthquake model with variation of fault parameters <i>N. Hata, J. Kanda, K. Dan, M. Muto &amp; J. Miyakoshi</i>	575
FE-5-3 The effects of portfolio manipulation on earthquake portfolio loss estimates <i>P. Bazzurro &amp; J. Park</i>	577
FE-5-4 Modeling spatial correlation of ground motion Intensity Measures for regional seismic hazard and portfolio loss estimation <i>J. Park, P. Bazzurro &amp; J. Baker</i>	579
FE-5-5 The influence of probabilistic loading and site-effects in the earthquake risk assessment of water system. The case of Duzce <i>M.N. Alexoudi, D.K. Manou &amp; T.N. Hatzigogos</i>	581
FE-5-6 Seismic risk analysis of electric power transmission systems <i>K.D. Pitilakis, T.D. Xenos, K.G. Kakderi, M.N. Alexoudi &amp; G.K. Theofilogiannakos</i>	583

### ***System identification and statistical model assessment***

FE-6-1 Identification of restoring force characteristics by regulation method <i>O. Maruyama</i>	585
-----------------------------------------------------------------------------------------------------	-----

FE-6-2 Identifying stiffness distributions by direct influence measurements <i>S. Hoffmann, K. Bergmeister, A. Strauss &amp; M. Preslmayr</i>	589
FE-6-3 Application of genetic algorithm and local search method to structural dynamic system identification <i>G.S. Wang &amp; F.K. Huang</i>	591
FE-6-4 Bayesian model updating of higher-dimensional dynamic systems <i>S. H. Cheung &amp; J.L. Beck</i>	593
FE-6-5 Identification of random material properties from monitoring of structures using stochastic chaos <i>F. Schoefs, H. Yáñez-Godoy &amp; A. Nouy</i>	595
FE-6-6 Advanced numerical models – influence of partial material factors <i>P. Koudelka &amp; T. Koudelka</i>	597
Author Index	599
