

Table of contents

| | |
|---|-----|
| Preface | V |
| Biographical details – John Robert Booker | VII |
| <i>Analytic solutions</i> | |
| Complex variable analysis of Mindlin's tunnel problem <i>A. Verruijt & J.R. Booker</i> | 3 |
| On the reinforcing action of an inextensible membrane embedded in an isotropic elastic halfspace <i>A.P.S. Selvadurai</i> | 23 |
| Failure stresses beneath granular embankments <i>T.J. Wiesner</i> | 33 |
| The force distribution at the base of sand-piles <i>J.M. Hill & G.M. Cox</i> | 43 |
| <i>Numerical methods</i> | |
| A three-dimensional model of uncoupled transient thermo-elasticity in non-homogeneous media <i>A. H. Elzein</i> | 65 |
| Linear and nonlinear consolidation analysis by BEM <i>P.K. Banerjee & C.B. Wang</i> | 81 |
| Boundary element analysis of problems in tunneling <i>G. Beer & Ch. Dünser</i> | 103 |
| Face stability when tunneling in soil and homogeneous rock <i>P.A. Vermeer & N. Ruse</i> | 123 |
| Stability of a plane strain circular tunnel in a cohesive-frictional soil <i>A.V. Lyamin & S.W. Sloan</i> | 139 |
| Role of undrained strength anisotropy in stability analysis <i>B. Ukritchon & A.J. Whittle</i> | 155 |
| Analysis of consolidation including sand drain <i>M. Zaman & A. Alvappillai</i> | 181 |
| Space-time finite elements and adaptive strategy for the coupled poroelasticity problem <i>K. Runesson, F. Larsson & P. Hansbo</i> | 193 |
| Penetration of strip and circular footings into layered clays <i>C.X. Wang & J.P. Carter</i> | 215 |

| | |
|--|-----|
| A new mechanical analysis of landslides <i>F. Darve & F. Laouafa</i> | 233 |
| <i>Constitutive behaviour and fundamentals</i> | |
| Behaviour of a soil paste continuum <i>A.N. Schofield</i> | 253 |
| Thermodynamics in civil engineering <i>D.W. Smith</i> | 267 |
| Critical state models and small-strain stiffness <i>G.T. Housby</i> | 295 |
| Effect of strength anisotropy on capacity of foundations <i>M.F. Randolph</i> | 313 |
| New developments and practical applications of the Multilaminate model for soils <i>H.F. Schweiger & H. Schuller</i> | 329 |
| <i>Liquefaction</i> | |
| Fundamental approach for liquefaction instability in saturated media <i>C.S. Desai</i> | 353 |
| Wildlife revisited <i>R.O. Davis & J.B. Berrill</i> | 355 |
| Pore pressure generation in cyclic simple shear tests on calcareous sediments <i>X. Mao, M. Fahey & M.F. Randolph</i> | 371 |
| An energy-based excess pore pressure generation model for cohesionless soils <i>R.A. Green, J.K. Mitchell & C.P. Polito</i> | 383 |
| <i>Wave propagation and effects</i> | |
| Wave-induced seabed response <i>M.S. Rahman</i> | 393 |
| Wave propagation analysis in two phase porous media with infinite domain <i>N. Khalili, M. Yazdchi & S. Valliappan</i> | 411 |
| <i>Piles</i> | |
| Piled raft foundations subjected to general loadings <i>J.C. Small & H.H. Zhang</i> | 431 |
| Pile-raft interaction – Alternative methods of analysis <i>H.G. Poulos</i> | 445 |
| The role of theoretical models in the analysis and design of rock socketed piles <i>C.M. Haberfield & J.P. Seidel</i> | 465 |
| Recent developments in the seismic analysis of pile foundations <i>W.D. Liam Finn, T. Thavaraj & G. Wu</i> | 489 |
| <i>Groundwater</i> | |
| Groundwater flow in layered aquifer systems <i>R.J. Best & J.R. Booker</i> | 511 |

| | |
|---|-----|
| A study of the low pressure grouting of granular soils <i>A. Cividini</i> | 525 |
| A nonlinear soil model for tunneling under compressed air <i>R.F. Stark, G. Oettl & G. Hofstetter</i> | 547 |
| <i>Geoenvironmental</i> | |
| Semi-analytical solutions of contamination from cylindrical and semi-cylindrical waste sources <i>C.J. Leo</i> | 571 |
| Theoretical solutions for calculating leakage through composite liner systems <i>R.K. Rowe & J.R. Booker</i> | 589 |
| Investigation of organic contaminant migration in natural clayey soils using a Boundary Element program <i>T. Itakura, D.W. Airey & A.H. Elzein</i> | 603 |
| Non isothermal multiphase flow in deformable porous media. Coupled formulation and application to nuclear waste disposal <i>A. Gens & S. Olivella</i> | 619 |
| <i>Pavement design</i> | |
| Shakedown analysis of flexible pavements <i>S.H. Shiau & H.S. Yu</i> | 643 |
| Shakedown under moving loads with applications to pavement design and wear <i>I.F. Collins & M. Boulbibane</i> | 655 |
| <i>Methodologies and design</i> | |
| Some modeling issues in geotechnical engineering <i>F.H. Kulhawy</i> | 677 |
| Determination of the spatial variability of soil design parameters and its significance in geotechnical engineering analyses <i>W.S. Kaggwa</i> | 681 |
| An analysis of the impact of extremely hot temperatures upon clay soils – The influence of coke ovens upon their foundation strata at Goa, India <i>A.R. Leventhal</i> | 705 |
| Development and application of a numerical model for simulating the stabilisation of the Leaning Tower of Pisa <i>D.M. Potts & J.B. Burland</i> | 737 |
| Keywords index | 759 |
| Author index | 761 |
