Preface	xv
1 Introduction	1
1.1 Historical Perspective	1
1.1.1 Need for Fiber-Optic Communications	2
1.1.2 Evolution of Lightwave Systems	3
1.2 Basic Concepts	7
1.2.1 Analog and Digital Signals	7
1.2.2 Channel Multiplexing	10
1.2.3 Modulation Formats	12
1.3 Optical Communication Systems	14
1.4 Lightwave System Components	15
1.4.1 Optical Fibers as a Communication Channel	16
1.4.2 Optical Transmitters	16
1.4.3 Optical Receivers	17
Problems	18
References	19
2 Optical Fibers	21
2.1 Geometrical-Optics Description	21
2.1.1 Step-Index Fibers	22
2.1.2 Graded-Index Fibers	23
2.2 Wave Propagation	25
2.2.1 Maxwell's Equations	25
2.2.2 Fiber Modes	27
2.2.3 Single-Mode Fibers	30
2.3 Dispersion in Single-Mode Fibers	33
2.3.1 Group-Velocity Dispersion	33
2.3.2 Material Dispersion	34
2.3.3 Waveguide Dispersion	35
2.3.4 Higher-Order Dispersion	36
2.3.5 Polarization-Mode Dispersion	37
2.4 Dispersion-Induced Limitations	39
2.4.1 Basic Propagation Equation	39
2.4.2 Chirped Gaussian Pulses	40
2.4.3 Limitations on the Bit Rate	42

- 2.5 Fiber Losses 45
 - 2.5.1 Attenuation Coefficient 46
 - 2.5.2 Material Absorption 47
 - 2.5.3 Rayleigh Scattering 47
 - 2.5.4 Waveguide Imperfections 48
- 2.6 Nonlinear Optical Effects 49
 - 2.6.1 Stimulated Light Scattering 49
 - 2.6.2 Nonlinear Phase Modulation 53
 - 2.6.3 Four-Wave Mixing 55
- 2.7 Fiber Design and Fabrication 56
 - 2.7.1 Silica Fibers 56
 - 2.7.2 Plastic Optical Fibers 59
 - 2.7.3 Cables and Connectors 60
- Problems 61
- References 63
- 3 Optical Transmitters 67
 - 3.1 Semiconductor Laser Physics 67
 - 3.1.1 Spontaneous and Stimulated Emissions 67
 - 3.1.2 Nonradiative Recombination 69
 - 3.1.3 Optical Gain 70
 - 3.1.4 Feedback and Laser Threshold 71
 - 3.1.5 Laser Structures and Modes 72
 - 3.2 Single-Mode Semiconductor Lasers 74
 - 3.2.1 Distributed Feedback Lasers 74
 - 3.2.2 Coupled-Cavity Semiconductor Lasers 76
 - 3.2.3 Tunable Semiconductor Lasers 77
 - 3.2.4 Vertical-Cavity Surface-Emitting Lasers 78
 - 3.3 Semiconductor Laser Characteristics 79
 - 3.3.1 CW Characteristics 80
 - 3.3.2 Modulation Bandwidth 82
 - 3.3.3 Relative Intensity Noise 84
 - 3.3.4 Spectral Linewidth 86
 - 3.4 Modulation Techniques 88
 - 3.4.1 Direct Modulation 88
 - 3.4.2 External Modulation 89
 - 3.5 Light-Emitting Diodes 92
 - 3.5.1 LED Characteristics 92
 - 3.5.2 LED Structures 94
 - 3.6 Transmitter Design 96
 - 3.6.1 Source-Fiber Coupling 96
 - 3.6.2 Driving Circuitry 98
 - 3.6.3 Reliability and Packaging 99
 - Problems 100
 - References 102
- 4 Optical Receivers 107
 - 4.1 Basic Concepts 107
 - 4.1.1 Responsivity and Quantum Efficiency 107
 - 4.1.2 Rise Time and Bandwidth 109

4.2	Common Photodetectors	110
4.2.1	$p-n$ Photodiodes	110
4.2.2	$p-i-n$ Photodiodes	111
4.2.3	Avalanche Photodiodes	114
4.2.4	MSM Photodetectors	119
4.3	Receiver Design	121
4.3.1	The Front End	121
4.3.2	The Linear Channel	122
4.3.3	Data-Recovery Section	123
4.3.4	Integrated Receivers	124
4.4	Receiver Noise	126
4.4.1	Noise Mechanisms	126
4.4.2	SNR of $p-i-n$ Receivers	128
4.4.3	SNR of APD Receivers	129
4.5	Coherent Detection	132
4.5.1	Local Oscillator	132
4.5.2	Homodyne Detection	133
4.5.3	Heterodyne Detection	133
4.5.4	Signal-to-Noise Ratio	134
4.6	Receiver Sensitivity	135
4.6.1	Bit-Error Rate	135
4.6.2	Minimum Received Power	137
4.6.3	Quantum Limit of Photodetection	139
4.7	Sensitivity Degradation	140
4.7.1	Extinction Ratio	140
4.7.2	Intensity Noise	141
4.7.3	Timing Jitter	143
4.8	Receiver Performance	144
	Problems	146
	References	148
5	Lightwave Systems	151
5.1	System Architectures	151
5.1.1	Point-to-Point Links	151
5.1.2	Distribution Networks	152
5.1.3	Local-Area Networks	154
5.2	Design Guidelines	155
5.2.1	Loss-Limited Lightwave Systems	155
5.2.2	Dispersion-Limited Lightwave Systems	157
5.2.3	Power Budget	158
5.2.4	Rise-Time Budget	159
5.3	Long-Haul Systems	161
5.3.1	Performance-Limiting Factors	161
5.3.2	Terrestrial Lightwave Systems	163
5.3.3	Undersea Lightwave Systems	165
5.4	Sources of Power Penalty	167
5.4.1	Modal Noise	167
5.4.2	Mode-Partition Noise	168
5.4.3	Reflection Feedback and Noise	170
5.4.4	Dispersive Pulse Broadening	172

5.4.5	Frequency Chirping	173
5.4.6	Eye-Closure Penalty	174
5.5	Forward Error Correction	175
5.5.1	Error-Correcting Codes	176
5.5.2	Coding Gain	176
5.6	Computer-Aided Design	178
	Problems	179
	References	181
6	Multichannel Systems	185
6.1	WDM Systems and Networks	185
6.1.1	High-Capacity Point-to-Point Links	186
6.1.2	Wide-Area and Metro-Area Networks	189
6.1.3	Multiple-Access WDM Networks	191
6.2	WDM Components	192
6.2.1	Optical Filters	193
6.2.2	Multiplexers and Demultiplexers	197
6.2.3	Add-Drop Multiplexers	200
6.2.4	Star Couplers	202
6.2.5	Wavelength Routers	203
6.2.6	WDM Transmitters and Receivers	204
6.3	System Performance Issues	207
6.3.1	Linear Crosstalk	207
6.3.2	Raman-Induced Nonlinear Crosstalk	209
6.3.3	XPM-Induced Nonlinear Crosstalk	211
6.3.4	FWM-Induced Nonlinear Crosstalk	212
6.3.5	Other Design Issues	213
6.4	Time-Division Multiplexing	214
6.4.1	Time-Domain Multiplexing	215
6.4.2	Time-Domain Demultiplexing	216
6.4.3	Performance of OTDM Systems	218
6.5	Subcarrier Multiplexing	219
6.5.1	Analog and Digital SCM Systems	219
6.5.2	Orthogonal Frequency-Division Multiplexing	221
6.6	Code-Division Multiplexing	223
6.6.1	Time-Domain Encoding	223
6.6.2	Frequency-Domain Encoding	224
	Problems	227
	References	229
7	Loss Management	235
7.1	Compensation of Fiber Losses	235
7.1.1	Periodic Amplification Scheme	236
7.1.2	Lumped Versus Distributed Amplification	237
7.1.3	Bidirectional Pumping Scheme	238
7.2	Erbium-Doped Fiber Amplifiers	239
7.2.1	Pumping and Gain Spectrum	239
7.2.2	Two-Level Model	241
7.2.3	Amplifier Noise	243
7.2.4	Multichannel Amplification	245

7.3	Raman Amplifiers	247
7.3.1	Raman Gain and Bandwidth	247
7.3.2	Raman-Induced Signal Gain	248
7.3.3	Multiple-Pump Raman Amplification	250
7.3.4	Noise Figure of Raman Amplifiers	252
7.4	Optical Signal-To-Noise Ratio	253
7.4.1	Lumped Amplification	253
7.4.2	Distributed Amplification	255
7.5	Electrical Signal-To-Noise Ratio	256
7.5.1	ASE-Induced Current Fluctuations	256
7.5.2	Impact of ASE on SNR	257
7.5.3	Noise Buildup in an Amplifier Chain	258
7.6	Receiver Sensitivity and Q Factor	259
7.6.1	Bit-Error Rate	259
7.6.2	Relation Between Q Factor and Optical SNR	261
7.7	Role of Dispersive and Nonlinear Effects	262
7.7.1	Noise Growth Through Modulation Instability	262
7.7.2	Noise-Induced Signal Degradation	264
7.7.3	Noise-Induced Energy Fluctuations	265
7.7.4	Noise-Induced Timing Jitter	266
7.8	Periodically Amplified Lightwave Systems	267
7.8.1	Numerical Approach	268
7.8.2	Optimum Launched Power	270
	Problems	272
	References	273
8	Dispersion Management	277
8.1	Dispersion Problem and Its Solution	277
8.2	Dispersion-Compensating Fibers	279
8.2.1	Conditions for Dispersion Compensation	279
8.2.2	Dispersion Maps	280
8.2.3	DCF Designs	281
8.3	Fiber Bragg Gratings	284
8.3.1	Constant-Period Gratings	284
8.3.2	Chirped Fiber Gratings	285
8.3.3	Sampled Gratings	287
8.4	Dispersion-Equalizing Filters	290
8.4.1	Gires–Tournois Filters	290
8.4.2	Mach–Zehnder and Other Filters	292
8.5	Optical Phase Conjugation	294
8.5.1	Principle of Operation	294
8.5.2	Compensation of Self-Phase Modulation	295
8.5.3	Generation of Phase-Conjugated Signal	296
8.6	Advanced Techniques	299
8.6.1	Tunable Dispersion Compensation	299
8.6.2	Higher-Order Dispersion Management	302
8.6.3	PMD Compensation	304
8.7	Electronic Dispersion Compensation	306
8.7.1	Pre-compensation at the Transmitter	306

8.7.2	Post-Compensation at the Receiver	309
	Problems	311
	References	313
9	Control of Nonlinear Effects	317
9.1	Impact of Fiber Nonlinearity	317
9.1.1	System Design Issues	318
9.1.2	Semianalytic Approach	321
9.1.3	Soliton and Pseudo-linear Regimes	323
9.2	Solitons in Optical Fibers	324
9.2.1	Properties of Optical Solitons	325
9.2.2	Loss-Managed Solitons	327
9.2.3	Dispersion-Managed Solitons	330
9.2.4	Timing Jitter	333
9.3	Pseudo-linear Lightwave Systems	336
9.3.1	Origin of Intrachannel Nonlinear Effects	337
9.3.2	Intrachannel Cross-Phase Modulation	338
9.3.3	Intrachannel Four-Wave Mixing	342
9.4	Management of Nonlinear Effects	344
9.4.1	Optimization of Dispersion Maps	344
9.4.2	Phase Alternation Technique	347
9.4.3	Polarization Bit Interleaving	348
9.4.4	Optical Phase Conjugation	350
9.4.5	Phase-Sensitive Amplification	351
	Problems	353
	References	354
10	Coherent Lightwave Systems	359
10.1	Coherent Transmitters	360
10.1.1	Encoding of Optical Signals	360
10.1.2	Amplitude and Phase Modulators	362
10.1.3	Quadrature Modulator	363
10.2	Coherent Receivers	364
10.2.1	Synchronous Heterodyne Demodulation	365
10.2.2	Asynchronous Heterodyne Demodulation	366
10.2.3	Optical Delay Demodulation	367
10.2.4	Phase Diversity and Polarization Diversity	369
10.3	Noise and Bit-Error Rate	371
10.3.1	Synchronous Heterodyne Receivers	371
10.3.2	Asynchronous Heterodyne Receivers	372
10.3.3	Receivers with Optical Delay Demodulation	374
10.4	Sources of Performance Degradation	376
10.4.1	Intensity Noise of Lasers	376
10.4.2	Phase Noise of Lasers	377
10.4.3	Effects of Fiber's Dispersion	378
10.5	Management of Nonlinear Effects	380
10.5.1	Nonlinear Phase Noise	380
10.5.2	Compensation of Nonlinear Phase Noise	383
10.5.3	Nonlinear Interference Noise	385

10.6	Digital Signal Processing	388
10.6.1	Removal of Intermediate Frequency and Phase Fluctuations	388
10.6.2	Compensation of GVD and PMD	390
10.6.3	Digital Backward Propagation	392
10.7	Experimental Progress	394
10.7.1	DPSK and DQPSK Formats	395
10.7.2	QPSK and QAM Formats	397
10.7.3	Coherent Orthogonal FDM	399
10.7.4	Optical Superchannels	401
10.8	Channel Capacity	403
	Problems	405
	References	406
11	Space-Division Multiplexing	413
11.1	SDM Technique	413
11.2	Modes of Optical Fibers	415
11.2.1	Step-Index Fibers	415
11.2.2	Graded-Index Fibers	417
11.2.3	Multicore Fibers	419
11.3	SDM Components	421
11.3.1	Design of SDM Fibers	421
11.3.2	Spatial Multiplexers and Demultiplexers	423
11.3.3	Multicore/Multimode Fiber Amplifiers	428
11.3.4	Other SDM Components	429
11.4	Modeling of SDM Systems	431
11.4.1	Multimode Coupled Nonlinear Equations	431
11.4.2	Averaged Multimode Nonlinear Equations	434
11.4.3	Nonlinear Effects in MCFs	436
11.4.4	Nonlinear Effects in MMFs	439
11.5	Experimental Progress	441
11.5.1	MCF-Based SDM Systems	442
11.5.2	MMF-Based SDM Systems	443
11.5.3	High-Capacity SDM Systems	445
	Problems	446
	References	447
12	Advanced Topics	451
12.1	Optical Signal Processing	452
12.1.1	Nonlinear Optical Loop Mirrors	452
12.1.2	Parametric Amplifiers	455
12.1.3	Semiconductor Optical Amplifiers	458
12.1.4	Bistable Optical Devices	460
12.1.5	Optical Flip-Flops	463
12.2	Wavelength Conversion	466
12.2.1	XPM-Based Wavelength Converters	466
12.2.2	FWM-Based Wavelength Converters	468
12.2.3	Semiconductor Waveguides	471
12.2.4	SOA-Based Wavelength Converters	472
12.3	Ultrafast Optical Switching	474
12.3.1	Time-Domain Demultiplexing	475

12.3.2 Packet Switching	479
12.3.3 Format Conversion	480
12.4 Optical Regeneration	482
12.4.1 2R Regenerators	482
12.4.2 3R Regenerators	486
12.4.3 Regeneration of Phase-Encoded Signals	490
12.5 Nonlinear Frequency-Division Multiplexing	492
12.5.1 Nonlinear Fourier Transform	492
12.5.2 Practical Implementation	494
Problems	496
