6 Best Practices of the CFD Trade 225

6.1 Toward Bullet-Proof Meshes 226

6.1.1 Additional Mesh Guidelines 234

6.1.2 Computational Node Spacing for RANS Models 235

6.1.3 Wall Functions 236

6.1.4 Computational Domain Size 237

6.2 Boundary and Initial Condition Recommendations 238

6.2.1 General BCs 239

6.2.2 BC Types in CFD Codes 240

6.2.3 Compatible Versus Incompatible BCs 244

6.2.4 Initial Conditions 245

6.3 RANS Modeling Recommendations 246

6.4 Miscellaneous Do's and Don'ts of the Trade 248

6.4.1 Well-Posed Solutions 248

6.4.2 Time Steps, Stability, and CFL 253

6.4.3 A Few More Tips 257

6.5 Natural Circulation Modeling 258

6.5.1 Natural Circulation Approximation 259

6.5.2 Additional Natural Circulation Modeling Guidelines 264

6.6 Data Visualization Tips 266

6.7 Problems 269

References 271

7 Listing for Turbulence Programs, Functions, and Fragments 275

7.1 The LIKE Algorithm, y^+ Calculator, and Eddy Scale Calculator 276

7.2 Peak Velocity Calculator for Laminar and Turbulent Natural Circulation 279

7.3 Molten Metal Physical Properties Calculator 287

7.4 FORTRAN Program for the Prandtl One-Equation Turbulence Model 290
