Preface *xv*

List of Abbreviations *xxi*

Part I The Vision of 6G and Technical Evolution 1

1	Standards History of Cellular Systems Toward 6G	3
1.1	0G: Pre-Cellular Systems	4
1.2	1G: The Birth of Cellular Network	6
1.2.1	Nordic Mobile Telephone (NMT)	7
1.2.2	Advanced Mobile Phone System (AMPS)	8
1.3	2G: From Analog to Digital	9
1.3.1	Global System for Mobile Communications (GSM)	10
1.3.2	Digital Advanced Mobile Phone System (D-AMPS)	11
1.3.3	Interim Standard 95 (IS-95)	11
1.3.4	Personal Digital Cellular (PDC)	12
1.3.5	General Packet Radio Service (GPRS)	12
1.3.6	Enhanced Data Rates for GSM Evolution (EDGE)	14
1.4	3G: From Voice to Data-Centric	15
1.4.1	Wideband Code-Division Multiple Access (WCDMA)	16
1.4.2	Code-Division Multiple Access 2000 (CDMA2000)	18
1.4.3	Time Division-Synchronous Code-Division Multiple Access (TD-SCDMA)	21
1.4.4	Worldwide Interoperability for Microwave Access (WiMAX)	22
1.5	4G: Mobile Internet	23
1.5.1	Long-Term Evolution-Advanced (LTE-Advanced)	25
1.5.2	WirelessMAN-Advanced	28
1.6	5G: From Human to Machine	30

1.7	Beyond 5G	37
1.8	Conclusions	39
	References	39
2	Pre-6G Technology and System Evolution	43
2.1	1G – AMPS	44
2.1.1	System Architecture	44
2.1.2	Key Technologies	46
2.1.2.1	Frequency Reuse	46
2.1.2.2	Cell Splitting	47
2.1.2.3	Sectorization	48
2.1.2.4	Handover	48
2.1.2.5	Frequency-Division Multiple Access	49
2.2	2G – GSM	49
2.2.1	System Architecture	50
2.2.1.1	Mobile Station Subsystem	50
2.2.1.2	Bases Station Subsystem	50
2.2.1.3	Network and Switching Subsystem	51
2.2.1.4	Operation and Support Subsystem	51
2.2.1.5	General Packet Radio Service	52
2.2.1.6	Gateway GPRS Support Node	53
2.2.2	Key Technologies	53
2.2.2.1	Time-Division Multiple Access	53
2.2.2.2	Frequency Hopping	54
2.2.2.3	Speech Compression	55
2.2.2.4	Channel Coding	55
2.2.2.5	Digital Modulation	56
2.2.2.6	Discontinuous Transmission (DXT)	56
2.3	3G – WCDMA	56
2.3.1	System Architecture	57
2.3.1.1	User Equipment	57
2.3.1.2	UMTS Terrestrial Radio Access Network	58
2.3.1.3	Core Network	59
2.3.2	Key Technologies	60
2.3.2.1	Code-Division Multiple Access	60
2.3.2.2	Rake Receiver	63
2.3.2.3	Turbo Codes	63
2.4	4G – LTE	64
2.4.1	System Architecture	65
2.4.1.1	Evolved Universal Terrestrial Radio Access Network	65
2.4.1.2	Evolved Packet Core	65

2.4.2	Key Technologies	68
2.4.2.1	Orthogonal Frequency-Division Multiplexing	70
2.4.2.2	Carrier Aggregation	71
2.4.2.3	Relaying	71
2.4.2.4	Heterogeneous Network	72
2.4.2.5	Coordinated Multi-Point Transmission and Reception	73
2.4.2.6	Device-to-Device Communications	73
2.4.2.7	License-Assisted Access	74
2.5	5G – New Radio	75
2.5.1	System Architecture	76
2.5.1.1	5G Core Network	77
2.5.1.2	Next Generation Radio Access Network	79
2.5.2	Key Technologies	81
2.5.2.1	Massive MIMO	81
2.5.2.2	Millimeter Wave	82
2.5.2.3	Non-Orthogonal Multiple Access	83
2.5.2.4	SDN/NFV	84
2.5.2.5	Network Slicing	85
2.5.2.6	Polar Codes	86
2.6	Conclusions	87
	References	87
3	The Vision of 6G: Drivers, Enablers, Uses, and Roadmap	89
3.1	Background	90
3.2	Explosive Mobile Traffic	92
3.3	Use Cases	94
3.4	Usage Scenarios	98
3.5	Performance Requirements	102
3.6	Research Initiatives and Roadmap	107
3.6.1	ITU	108
3.6.2	Third Generation Partnership Project	110
3.6.3	Industry	110
3.6.4	Europe	110
3.6.5	The United States	113
3.6.6	China	116
3.6.7	Japan	116
3.6.8	South Korea	117
3.7	Key Technologies	117
3.7.1	Millimeter Wave	118
3.7.2	Terahertz Communications	118
3.7.3	Optical Wireless Communications	119

- 3.7.4 Massive MIMO 120
- 3.7.5 Intelligent Reflecting Surfaces 121
- 3.7.6 Next-Generation Multiple Access 122
- 3.7.7 Open Radio Access Network 123
- 3.7.8 Non-Terrestrial Networks 124
- 3.7.9 Artificial Intelligence 125
- 3.7.10 Communication-Computing-Sensing Convergence 127
- 3.8 Conclusions 128
- References 128

Part II Full-Spectra Wireless Communications in 6G 131

- 4 Enhanced Millimeter-Wave Wireless Communications in 6G 133**
 - 4.1 Spectrum Shortage 134
 - 4.2 mmWave Propagation Characteristics 136
 - 4.2.1 Large-Scale Propagation Effects 137
 - 4.2.1.1 Free-Space Propagation Loss 137
 - 4.2.1.2 NLOS Propagation and Shadowing 139
 - 4.2.1.3 Atmospheric Attenuation 141
 - 4.2.2 Small-Scale Propagation Effects 143
 - 4.2.3 Delay Spread and Coherence Bandwidth 145
 - 4.2.4 Doppler Spread and Coherence Time 146
 - 4.2.5 Angular Spread 149
 - 4.3 Millimeter-Wave Channel Models 152
 - 4.3.1 Large-Scale Fading 152
 - 4.3.2 3GPP Channel Models 155
 - 4.3.2.1 Urban Micro Scenario 155
 - 4.3.2.2 Urban Macro Scenario 156
 - 4.3.2.3 Indoor Scenario 157
 - 4.3.3 Small-Scale Fading 159
 - 4.4 mmWave Transmission Technologies 163
 - 4.4.1 Beamforming 163
 - 4.4.1.1 Digital Beamforming 164
 - 4.4.1.2 Analog Beamforming 168
 - 4.4.1.3 Hybrid Beamforming 169
 - 4.4.1.4 3D Beamforming 173
 - 4.4.2 Initial Access 175
 - 4.4.2.1 Multi-Beam Synchronization and Broadcasting 176
 - 4.4.2.2 Conventional Initial Access in LTE 178

4.4.2.3	Beam-Sweeping Initial Access in NR	181
4.4.3	Omnidirectional Beamforming	183
4.4.3.1	Random Beamforming	185
4.4.3.2	Enhanced Random Beamforming	187
4.4.3.3	Complementary Random Beamforming	190
4.5	Summary	192
	References	193
5	Terahertz Technologies and Systems for 6G	195
5.1	Potential of Terahertz Band	196
5.1.1	Spectrum Limit	196
5.1.2	The Need of Exploiting Terahertz Band	198
5.1.3	Spectrum Regulation on Terahertz Band	203
5.2	Terahertz Applications	205
5.2.1	Terahertz Wireless Communications	205
5.2.1.1	Terabit Cellular Hotspot	205
5.2.1.2	Terabit Wireless Local-Area Network	206
5.2.1.3	Terabit Device-To-Device Link	206
5.2.1.4	Secure Wireless Communication	207
5.2.1.5	Terabit Wireless Backhaul	207
5.2.1.6	Terahertz Nano-Communications	208
5.2.2	Non-Communication Terahertz Applications	209
5.2.2.1	Terahertz Sensing	209
5.2.2.2	Terahertz Imaging	210
5.2.2.3	Terahertz Positioning	212
5.3	Challenges of Terahertz Communications	212
5.3.1	High Free-Space Path Loss	213
5.3.2	Atmospheric Attenuation	215
5.3.3	Weather Effects	222
5.3.4	Blockage	224
5.3.5	High Channel Fluctuation	226
5.4	Array-of-Subarrays Beamforming	228
5.5	Lens Antenna	231
5.5.1	Refraction of Radio Waves	232
5.5.2	Lens Antenna Array	233
5.6	Case Study – IEEE 802.15.3d	236
5.6.1	IEEE 802.15.3d Usage Scenarios	237
5.6.2	Physical Layer	240
5.6.2.1	Channelization	240
5.6.2.2	Modulation	242
5.6.2.3	Forward Error Correction	242

5.6.3	Medium Access Control	244
5.6.4	Frame Structure	246
5.6.4.1	Preamble	247
5.6.4.2	PHY Header	247
5.6.4.3	MAC Header	248
5.6.4.4	Construction Process of Frame Header	248
5.7	Summary	250
	References	251

6 Optical and Visible Light Wireless Communications in 6G 253

6.1	The Optical Spectrum	254
6.1.1	Infrared	254
6.1.2	Visible Light	256
6.1.3	Ultraviolet	257
6.2	Advantages and Challenges	258
6.3	OWC Applications	262
6.4	Evolution of Optical Wireless Communications	264
6.4.1	Wireless Infrared Communications	265
6.4.2	Visible Light Communications	266
6.4.3	Wireless Ultraviolet Communications	267
6.4.4	Free-Space Optical Communications	268
6.5	Optical Transceiver	268
6.6	Optical Sources and Detectors	271
6.6.1	Light-Emitting Diode	273
6.6.2	Laser Diode	276
6.6.3	Photodiode	280
6.7	Optical Link Configuration	283
6.8	Optical MIMO	286
6.8.1	Spatial Multiplexing	286
6.8.2	Spatial Modulation	289
6.9	Summary	292
	References	292

Part III Smart Radio Networks and Air Interface Technologies for 6G 295

7 Intelligent Reflecting Surface-Aided Communications for 6G 297

7.1	Basic Concept	298
7.2	IRS-Aided Single-Antenna Transmission	302

7.2.1	Signal Model	303
7.2.2	Passive Beamforming	306
7.2.3	Product-Distance Path Loss	309
7.3	IRS-Aided Multi-Antenna Transmission	310
7.3.1	Joint Active and Passive Beamforming	310
7.3.1.1	SDR Solution	312
7.3.1.2	Alternating Optimization	314
7.3.2	Joint Precoding and Reflecting	315
7.4	Dual-Beam Intelligent Reflecting Surface	318
7.4.1	Dual Beams Over Hybrid Beamforming	318
7.4.2	Dual-Beam IRS	321
7.4.3	Optimization Design	322
7.5	IRS-Aided Wideband Communications	325
7.5.1	Cascaded Frequency-Selective Channel	325
7.5.2	IRS-Aided OFDM System	327
7.5.3	Rate Maximization	330
7.6	Multi-User IRS Communications	331
7.6.1	Multiple Access Model	332
7.6.2	Orthogonal Multiple Access	333
7.6.2.1	Time-Division Multiple Access	334
7.6.2.2	Frequency-Division Multiple Access	336
7.6.3	Non-Orthogonal Multiple Access	337
7.7	Channel Aging and Prediction	339
7.7.1	Outdated Channel State Information	341
7.7.1.1	Doppler Shift	341
7.7.1.2	Phase Noise	343
7.7.2	Impact of Channel Aging on IRS	343
7.7.3	Classical Channel Prediction	345
7.7.3.1	Autoregressive Model	345
7.7.3.2	Parametric Model	347
7.7.4	Recurrent Neural Network	348
7.7.5	RNN-Based Channel Prediction	351
7.7.5.1	Flat-Fading Channel Prediction	352
7.7.5.2	Frequency-Selective Fading Channel Prediction	353
7.7.6	Long-Short Term Memory	355
7.7.7	Deep Learning-Based Channel Prediction	358
7.8	Summary	359
	References	359
8	Multiple Dimensional and Antenna Techniques for 6G	363
8.1	Spatial Diversity	364
8.2	Receive Combining	366

8.2.1	Selection Combining	368
8.2.2	Maximal Ratio Combining	370
8.2.3	Equal-Gain Combining	373
8.3	Space-Time Coding	374
8.3.1	Repetition Coding	375
8.3.2	Space-Time Trellis Codes	377
8.3.3	Alamouti Coding	379
8.3.4	Space-Time Block Codes	381
8.4	Transmit Antenna Selection	383
8.5	Beamforming	386
8.5.1	Classical Beamforming	386
8.5.2	Single-Stream Precoding	390
8.6	Spatial Multiplexing	393
8.6.1	Single-User MIMO	394
8.6.2	MIMO Precoding	400
8.6.2.1	Full CSI at the Transmitter	400
8.6.2.2	Limited CSI at the Transmitter	403
8.6.3	MIMO Detection	406
8.6.3.1	Maximum-Likelihood Detection	406
8.6.3.2	Linear Detection	407
8.6.3.3	Successive Interference Cancellation	410
8.7	Summary	413
	References	413
9	Cellular and Cell-Free Massive MIMO Techniques in 6G	417
9.1	Multi-User MIMO	418
9.1.1	Broadcast and Multiple-Access Channels	419
9.1.2	Multi-User Sum Capacity	422
9.1.3	Dirty Paper Coding	425
9.1.4	Zero-Forcing Precoding	428
9.1.5	Block Diagonalization	429
9.2	Massive MIMO	432
9.2.1	CSI Acquisition	433
9.2.2	Linear Detection in Uplink	435
9.2.2.1	Matched Filtering	436
9.2.2.2	ZF Detection	436
9.2.2.3	MMSE Detection	437
9.2.3	Linear Precoding in Downlink	437
9.2.3.1	Conjugate Beamforming	438
9.2.3.2	ZF Precoding	438
9.2.3.3	Regularized ZF Precoding	439

9.3	Multi-Cell Massive MIMO	439
9.3.1	Pilot Contamination	441
9.3.2	Uplink Data Transmission	444
9.3.3	Downlink Data Transmission	446
9.4	Cell-Free Massive MIMO	447
9.4.1	Cell-Free Network Layout	448
9.4.2	Uplink Training	449
9.4.3	Uplink Signal Detection	451
9.4.3.1	Matched Filtering	452
9.4.3.2	ZF Detection	452
9.4.3.3	MMSE Detection	452
9.4.4	Conjugate Beamforming	453
9.4.5	Zero-Forcing Precoding	455
9.4.6	Impact of Channel Aging	457
9.4.6.1	Channel Aging	457
9.4.6.2	Performance Degradation	460
9.5	Opportunistic Cell-Free Communications	464
9.5.1	Cell-free Massive Wideband Systems	464
9.5.2	Opportunistic AP Selection	466
9.5.3	Spectral Efficiency Analysis	468
9.6	Summary	472
	References	472
10	Adaptive and Non-Orthogonal Multiple Access Systems in 6G	475
10.1	Frequency-Selective Fading Channel	476
10.2	Multi-Carrier Modulation	480
10.2.1	The Synthesis and Analysis Filters	480
10.2.2	Polyphase Implementation	483
10.2.3	Filter Bank Multi-Carrier	486
10.3	Orthogonal Frequency-Division Multiplexing	487
10.3.1	DFT Implementation	491
10.3.2	Cyclic Prefix	493
10.3.3	Frequency-Domain Signal Processing	496
10.3.4	Out-of-Band Emission	499
10.4	Orthogonal Frequency-Division Multiple Access	503
10.4.1	Orthogonal Frequency-Division Multiple Access	503
10.4.2	Single-Carrier Frequency-Division Multiple Access	505
10.4.3	Cyclic Delay Diversity	507
10.4.4	Multi-Cell OFDMA	510
10.5	Cell-Free Massive MIMO-OFDMA	512

10.5.1	The System Model	513
10.5.2	The Communication Process	516
10.5.2.1	Uplink Training	516
10.5.2.2	Uplink Payload Data Transmission	518
10.5.2.3	Downlink Payload Data Transmission	518
10.5.3	User-Specific Resource Allocation	519
10.6	Non-Orthogonal Multiple Access	520
10.6.1	Fundamentals of NOMA	521
10.6.1.1	Downlink Non-Orthogonal Multiplexing	522
10.6.1.2	Uplink Non-Orthogonal Multiple Access	525
10.6.2	Multi-User Superposition Coding	528
10.6.3	Uplink Grant-Free Transmission	531
10.6.4	Code-Domain NOMA	533
10.6.4.1	Low-Density Signature-CDMA/OFDM	533
10.6.4.2	Sparse Code Multiple Access	536
10.7	Summary	538
	References	538
