Preface.....	xiii
Author	xv

Chapter 1	Introduction.....	1
------------------	--------------------------	----------

Chapter 2	Material.....	3
------------------	----------------------	----------

2.1	Metallurgical Fundamentals	3
2.2	Variety of Materials	3
2.2.1	Carbon Steel (CS).....	3
2.2.2	Low Alloy Steel (LAS).....	3
2.2.3	Stainless Steel (SS).....	4
2.2.4	Nonferrous Alloys.....	4
2.2.5	Nonmetallic Materials	5
2.3	Material Selection.....	5
2.3.1	Criteria for Selection of Materials	5
2.3.2	Ductile and Brittle Materials	5
2.3.3	Chemical Effect of Fluid in Contact.....	6
2.3.4	Temperature	6
2.3.5	Pressure and Allowable Stress	6
2.4	Heat Treatment.....	8
2.4.1	Division of the Ferrous Material.....	8
2.4.2	Post-fabrication Heat Treatment	8
2.4.3	Post-weld Heat Treatment (PWHT).....	8
2.5	Non-destructive Testing (NDT) and Weld Efficiency	9
2.6	Impact Test and Minimum Design Metal Temperature (MDMT)	10
2.7	Hydraulic Test (HT).....	12
	Reference	12

Chapter 3	Mechanical Design Basics.....	13
------------------	--------------------------------------	-----------

3.1	Basics.....	13
3.1.1	XYZ Coordinate Convention.....	13
3.1.2	Degrees of Freedom.....	13
3.1.3	Boundary Conditions.....	13
3.1.4	Load Condition	14
3.1.5	Transfer of Forces.....	14
3.1.6	Rotation of Axis.....	15
3.1.7	Free Body Diagram.....	17
3.1.8	Poisson's Ratio.....	17
3.1.9	Moment of Inertia.....	17

3.1.10	Polar Moment of Inertia.....	18
3.1.11	Significant Figures in Numbers	19
3.2	Design Theories	19
3.2.1	Elasticity Theory and Hook's Law	19
3.2.2	Plastic Theory	19
3.2.3	Beam Theory.....	22
3.3	Flexure or Beam Formulas	23
3.4	Deflection.....	24
3.4.1	Macaulay's Method of Integration.....	24
3.4.2	Moment Area Method.....	25
3.4.3	Strain Energy Method.....	26
3.4.4	Castigliano's Theorem.....	26
3.5	Long Shells with Three Supports.....	27
3.6	Loads.....	30
3.7	Stresses	30
3.7.1	Tensile.....	31
3.7.2	Compression	31
3.7.3	Shear Stress.....	31
3.7.3.1	Pure Shear	31
3.7.3.2	Transverse Shear Stress.....	31
3.7.3.3	Torsional Shear	33
3.7.4	Combined and Allowable Stress	33
3.7.5	Compression Bending.....	34
3.7.6	Fatigue	34
3.7.7	Brittle Fracture.....	35
3.7.8	Stress Concentration	35
3.8	Analysis Methods	35
3.8.1	Equilibrium Method.....	35
3.8.2	Integration Method	36
3.8.3	Theorem of Least Work	36
3.8.4	Experimental Method	36
3.8.5	Steps in Mechanical Design of Equipment.....	36
3.9	Elastic Failure Theories	36
3.9.1	Maximum Principal Stress Theory	37
3.9.2	Maximum Strain Theory.....	37
3.9.3	Maximum Shear Stress Theory.....	37
3.9.4	Theory of Constant Energy of Distortion (Von-Mises Theory).....	37
3.10	Matrix Equation of the Beam Element	38
	Reference	38

Chapter 4 Pressure Vessel Design Basics 39

4.1	General.....	39
4.1.1	Shape of the Shell	39
4.1.2	Pressure and Static Head	39

4.2	Loads.....	40
4.3	Membrane Theory.....	41
4.3.1	Shells of Revolution.....	41
4.3.2	Membrane Equation.....	42
4.4	Stresses	44
4.4.1	Stress Categorization.....	45
4.4.1.1	Primary Stresses	45
4.4.1.2	Secondary Stresses	45
4.4.1.3	Peak Stress F	45
4.4.2	Shear Stress in a Cylindrical Shell	46
4.4.3	Allowable Stresses	46
4.4.4	Thermal Stresses	48

Chapter 5 Internal Pressure 49

5.1	Cylindrical Parts	49
5.1.1	Circumferential Stress.....	49
5.1.2	Longitudinal Stress.....	50
5.1.3	Radial Stress.....	50
5.2	Spherical Parts	50
5.3	Conical Parts	51
5.4	Toroidal Shell and Tube Bend	53
5.5	End Closures.....	54
5.5.1	Flat.....	55
5.5.2	Hemispherical	55
5.5.3	Ellipsoidal	55
5.5.4	Torispherical.....	58
5.5.5	Ellipsoidal and Torispherical Heads with $0.0005 < t/L < 0.002$	60
5.6	Failure Analysis	60
	References	61

Chapter 6 External Pressure 63

6.1	Cylinder	63
6.1.1	Effects on Analysis for Variations in L/D and D/t Ratios.....	63
6.1.2	Critical Length	64
6.1.3	Critical Pressure	64
6.1.4	Strain Coincident to P_c	66
6.1.5	Comparison of the above Equations with Code Equations.....	66
6.1.6	Design of a Circumferential Stiffener Ring	67
6.2	Hemispherical Head.....	69
6.3	Ellipsoidal and Torispherical Heads	69
6.4	Conical Parts.....	70
	References	71

Chapter 7	Discontinuity Stresses.....	73
7.1	General.....	73
7.2	General Procedure	74
7.3	Cylindrical to Hemispherical Head	76
7.4	Cylinder to Other End Closures.....	77
7.4.1	Semiellipsoidal Head	77
7.4.2	Torispherical Head	77
7.4.3	Flat Plate.....	77
7.5	Cylinder to Cone.....	78
7.6	Analysis in the Cylinder for Edge Forces at any Distance from the Edge	81
7.7	Design Tips	81
	References	81
Chapter 8	Local Stresses	83
8.1	Openings under Pressure	83
8.1.1	Analysis.....	83
8.1.2	Small Openings	84
8.1.3	Single Opening.....	84
8.1.3.1	Set through (Insert) Radial Nozzle	85
8.1.3.2	Set on Nozzle.....	87
8.1.3.3	Taper Nozzle.....	88
8.1.3.4	Pad Type Nozzles	89
8.1.3.5	Non-radial Nozzles	90
8.1.4	Multiple Openings.....	92
8.1.5	Continuous Openings (Ligaments)	93
8.1.6	Large Bore.....	95
8.1.7	Weld Strength.....	97
8.1.8	Local Stresses due to Opening in Other Shells and Heads	100
8.1.9	Opening in Shells Subjected to External Pressure	100
8.2	Local Stresses at the Junction in the Shell due to External Forces through Attachments including Nozzles	100
8.2.1	Cylindrical Shell.....	104
8.2.1.1	Cylindrical Attachment or Nozzle	104
8.2.1.2	Square/Rectangular Attachment	104
8.2.1.3	Limitations and Effects.....	107
8.2.2	Spherical Shell	107
8.2.2.1	Rigid Attachment.....	108
8.2.2.2	Hollow Attachment.....	108
8.3	Local Stresses in the Cylindrical Shell and Nozzle at their Junction due to External Force Tensor on the Nozzle	110
	References	112

Chapter 9	Thermal Stresses and Piping Flexibility	113
9.1	Differential Movement.....	113
9.2	Basics of Thermal Stresses	114
9.3	Guided Cantilever	115
9.4	Simplified Analysis.....	116
9.4.1	3D Piping with Elements in Orthogonal Axes	117
9.4.2	3D Piping with Elements in any of the Three Axes	117
9.4.3	Code Comparison	118
9.4.4	Allowable Stress	118
9.5	Analysis from Basics	119
9.5.1	One-dimensional System.....	119
9.5.2	Two-dimensional System.....	119
9.5.3	Three-dimensional System	121
9.6	Formation of Flexibility Matrix of Shell (Pipe) Elements	121
9.6.1	Single Element in Plane Forces	123
9.6.2	3D System.....	123
9.6.2.1	Beam Theory.....	124
9.6.2.2	Castigliano's First Theorem	125
9.7	Formation of Flexibility Matrix for Bend Elements.....	127
	Reference	131
Chapter 10	Flat-Plate Components.....	133
10.1	Flat Plate Theory.....	133
10.2	Circular Plates.....	134
10.2.1	Simply Supported	135
10.2.2	Clamped (fixed)	136
10.3	Rectangular Plates	137
10.3.1	Edges SS	137
10.3.2	Fixed Edges.....	138
10.3.3	Equations for Maximum Stress for Rectangular Plates	139
10.4	Circular Ring	140
10.4.1	Flat Ring under Internal Pressure with Both Edges Supported	141
10.4.2	Flat Ring under Internal Pressure with One Edge (Outer) Supported.....	142
10.5	Stiffeners.....	143
10.6	Rectangular Vessels	144
10.7	Tube Sheet	145
10.7.1	General.....	145
10.7.2	Attachment to Shells, Tubes, and Stays.....	147

10.7.3	Analysis	147
10.7.3.1	Pressure Areas of Stays and Stress in Stays	148
10.7.3.2	Unsupported Portions in the Tube Sheet	149
10.7.3.3	Diagonal Stay and Gussets	150
10.7.3.4	Flanged and Extended as Flange Tube Sheets	150
	References	150
Chapter 11	Supports	151
11.1	Saddle	151
11.1.1	Longitudinal and Transverse Shear Stresses in the Shell	153
11.1.2	Analysis of the Saddle Reaction due to Wind/Seismic	154
11.1.3	Circumferential Stresses at the Saddle Section due to Saddle Reaction Q	155
11.1.4	Design Philosophy	159
11.1.5	Saddle Part Design	159
11.1.5.1	Splitting Force	159
11.1.5.2	Compressive and Bending Stress in Web and Rib	160
11.1.5.3	Bending Stress in Base Plate due to Base Pressure	160
11.2	Skirt	161
11.3	Leg and Lug Supports	161
11.4	Bolted Bracket	161
11.5	Base Plate	161
11.5.1	Rectangular Base Plate	163
11.5.2	Circular Ring Type Base Plate	166
11.5.3	Base Ring Thickness	170
11.6	Foundation Bolts	172
11.7	Rollers for Sliding Supports	172
11.8	Handling and Transport	174
11.8.1	Analysis	175
11.8.2	Transport	177
	References	178
Chapter 12	Wind and Seismic	179
12.1	Wind	179
12.2	Earthquake	180

12.2.1	Rigid-Structure Approach (RSA)	181
12.2.2	Flexible Tall Structure Approach	181
12.3	Other Standards	183
12.3.1	UBC-1997	183
12.3.1.1	Wind Pressure Calculations	183
12.3.1.2	Seismic Base Shear Calculation	183
12.3.2	Australian and New Zealand Standard AS/NZS 1170	184
12.3.3	American standard ASCE	185
12.4	Application of Wind/Seismic Load	186

Chapter 13 Flanges..... 189

13.1	Basics of Flange Analysis	189
13.2	Selection of Parameters and their Influence on Flange Design	190
13.2.1	Circumferential Pitch of Bolts (Pc)	190
13.2.2	Flange Width	191
13.2.3	Gasket	191
13.2.4	Philosophy of the Selection of Flange Parameters	193
13.3	Flange Analysis	193
13.3.1	Seating Condition	193
13.3.2	Operating Condition	194
13.4	Computation of Stresses in Flanges	195
13.4.1	Loose and Integral Flange	195
13.4.2	Full Faced Flange	198
13.4.3	Ring-type Joints	198
13.4.4	Lap Flange	198
13.4.5	Blind Flange	199
13.4.6	Rectangular Flange	199
13.4.6.1	Analysis in the Normal Direction	200
13.4.6.2	Analysis in the Tangential Direction	203
13.4.7	Standard Flanges	203
13.4.8	Other Flanges	204
	References	204

Chapter 14 Vibration 205

14.1	General	205
14.2	Damaging Effects of Vibration	206
14.3	Natural Frequency	206
14.3.1	Tubes of the Shell and Tube Heat Exchanger	206
14.3.2	Tubes of the Tube Bank of Heat Exchanger	207
14.4	Vibration in Flat Plates	208

14.5	Tall Vessels Like Chimneys	208
14.6	Flow-induced Frequencies and Vibration	208
14.6.1	Vortex Frequency	209
14.6.2	Buffeting Frequency	210
14.6.3	Acoustic Frequency	210
	Reference	211
Chapter 15	Expansion Joints	213
15.1	Types of Expansion Joints: Circular or Rectangular and Non-metallic or Metallic	213
15.2	Unreinforced Bellows	215
15.2.1	Circumferential Membrane Stress in Convolution (σ_c) due to Pressure	216
15.2.2	Longitudinal Bending Stress (σ_8) due to Pressure in Rectangular Bellows ($N > 1$)	217
15.2.3	Meridian Membrane and Bending Stresses due to Pressure	218
15.2.4	Expansion Stress, Fatigue Life, and Spring Rate	218
15.2.5	Tangent and Collar	220
15.2.6	Instability due to Pressure	221
15.3	Reinforced Bellows	223
15.4	Movements	225
15.4.1	Axial	226
15.4.2	Angular Rotation	226
15.4.3	Lateral Displacement	227
15.4.4	Total Equivalent Axial Displacement Range per Convolution	227
15.4.5	Cold Pull	228
15.5	Factor Influence on Design	228
15.6	Vibration in Bellows	228
15.6.1	Internal Flow	228
15.6.2	Calculation of Natural Frequency (f_n)	229
15.6.2.1	In Single Bellow	229
15.6.2.2	Universal Expansion Joint (Dual Bellow)	229
	References	229
	Index	231
