

Contents

Preface	vii
Chapter 1 Computer calligraphy and program structure	1
1.1 Raster scan displays	2
1.2 Program structures and line images	15
1.3 Windows and viewports	26
1.4 Trend graph program techniques	34
Chapter 2 Raster-ops, palettes and interactive drawing and painting	57
2.1 GET and PUT	57
2.2 The video look-up table	61
2.3 Image switching – non-overlapping images (PCjr)	65
2.4 Image plane switching – overlapping images (PCjr)	68
2.5 Composite image with priority (PCjr)	77
2.6 Basic interaction techniques	87
2.7 Colour painting	98
2.8 Graphics input devices	107
Chapter 3 Manipulations in the two-dimensional world	114
3.1 Two-dimensional transformations and matrix notation	114
3.2 Non-linear transformations	131

Chapter 4	Symmetry and two-dimensional ornamentation	142
4.1	Types of symmetry	143
4.2	Program organization	145
4.3	Symmetry of bands or strips	150
4.4	Network patterns	162
Chapter 5	Night and day – a journey through the world of tessellations	207
5.1	An introductory tessellation layout planner	210
5.2	Non-periodic tessellations	217
5.3	Tile deformations and the world of Escher	221
5.4	Colouring and decorating tiles	238
5.5	Further exploration of the world of Escher	242
Chapter 6	Recursion, fractals and natural patterns	250
6.1	A simple introduction to recursive processes	250
6.2	Some easy recursive programs	252
6.3	How it works	257
6.4	Recursive shapes	261
6.5	Reptiles	269
6.6	Space filling curves and fractals	269
6.7	Fractal variations – simulating a coastline	283
Chapter 7	The third dimension – representation	296
7.1	Representation of three-dimensional models	297
7.2	Generation of three-dimensional models – pseudo three-dimensional techniques	306
7.3	Input of three-dimensional data	314
7.4	A case study – the wireframe wineglass	321
Chapter 8	The three-dimensional world – manipulations	327
8.1	Three-dimensional graphics – general transformations	327
8.2	World coordinates to screen coordinates	336
8.3	The viewing transformation	338
8.4	Decorative techniques in three dimensions	350
8.5	Stereo effects	358
8.6	The use of colour in transformations	364

Chapter 9 Reality in computer graphics	365
9.1 Hidden surface removal	366
9.2 Depth buffer algorithm	367
9.3 Back surface elimination	368
9.4 Depth sort algorithm	373
9.5 Program implementation of the depth sort algorithm	381
 Chapter 10 A lexicon of mathematical shapes	 399
10.1 Sine waves	399
10.2 Ellipses and circles	403
10.3 Spirals	406
10.4 Lissajous patterns	410
10.5 Squirals	417
10.6 The use of colour in patterns	417
10.7 Cycloids	418
 Appendix 1 Summary of screen mode and colour facilities	 423
Appendix 2 Bits, bytes and hex	425
Appendix 3 Matrix notation and multiplication	432
Appendix 4 The viewing transformation	434
Appendix 5 A brief description of IBM graphics enhancements	438
 Bibliography	 449
 Index	 451
