Preface	v
Chapter 1. Preliminaries	1
1.1. Least Squares Approximation	1
1.2. Orthonormal Bases	7
1.3. Fourier Series	9
1.4. Fourier Transform	12
1.5. Exercises	16
1.6. Bibliography	16
Chapter 2. Probability	17
2.1. Definitions	17
2.2. Expected Values and Moments	20
2.3. Monte Carlo Methods	26
2.4. Parametric Estimation	29
2.5. The Central Limit Theorem	31
2.6. Conditional Probability and Conditional Expectation	34
2.7. Bayes' Theorem	38
2.8. Exercises	40
2.9. Bibliography	42
Chapter 3. Brownian Motion	43
3.1. Definition of Brownian Motion	43
3.2. Brownian Motion and the Heat Equation	45
3.3. Solution of the Heat Equation by Random Walks	47
3.4. The Wiener Measure	50
3.5. Heat Equation with Potential	52
3.6. Physicists' Notation for Wiener Measure	55
3.7. Another Connection Between Brownian Motion and the Heat Equation	57
3.8. First Discussion of the Langevin Equation	59
3.9. Solution of a Nonlinear Differential Equation by Branching Brownian Motion	64
3.10. A Brief Introduction to Stochastic ODEs	65
3.11. Exercises	67

3.12. Bibliography	69
Chapter 4. Stationary Stochastic Processes	71
4.1. Weak Definition of a Stochastic Process	71
4.2. Covariance and Spectrum	74
4.3. The Inertial Spectrum of Turbulence	76
4.4. Random Measures and Random Fourier Transforms	78
4.5. Prediction for Stationary Stochastic Processes	84
4.6. Data Assimilation	89
4.7. Exercises	92
4.8. Bibliography	95
Chapter 5. Statistical Mechanics	97
5.1. Mechanics	97
5.2. Statistical Mechanics	99
5.3. Entropy and Equilibrium	102
5.4. The Ising Model	105
5.5. Markov Chain Monte Carlo	107
5.6. Renormalization	111
5.7. Exercises	116
5.8. Bibliography	117
Chapter 6. Time-Dependent Statistical Mechanics	119
6.1. More on the Langevin Equation	119
6.2. A Coupled System of Harmonic Oscillators	122
6.3. Mathematical Addenda	124
6.4. The Mori-Zwanzig Formalism	129
6.5. More on Fluctuation-Dissipation Theorems	134
6.6. Scale Separation and Weak Coupling	135
6.7. Noninstantaneous Memory	137
6.8. Exercises	141
6.9. Bibliography	142
Index	145
