| <i>Foreword by John Miles</i>   | xiii |
| <i>Preface</i>  | xix  |
| 1 INTRODUCTION  |      |
| <b>1</b> Introduction   | 1    |
| <b>2</b> Mechanisms of instability  | 4    |
| <b>3</b> Fundamental concepts of hydrodynamic stability                         | 8    |
| <b>4</b> Kelvin–Helmholtz instability   | 14   |
| <b>5</b> Break-up of a liquid jet in air  | 22   |
| Problems for chapter 1  | 27   |
| 2 THERMAL INSTABILITY   |      |
| <b>6</b> Introduction   | 32   |
| <b>7</b> The equations of motion  | 34   |
| The exact equations, 34; The Boussinesq equations, 35                           | 35   |
| <b>8</b> The stability problem  | 37   |
| The linearized equations, 37; The boundary conditions, 40; Normal modes, 42     | 40   |
| <b>9</b> General stability characteristics                                      | 44   |
| Exchange of stabilities, 44; A variational principle, 45                        | 45   |
| <b>10</b> Particular stability characteristics                                  | 50   |
| Free–free boundaries, 50; Rigid–rigid boundaries, 51; free–rigid boundaries, 52 | 51   |
| <b>11</b> The cells   | 52   |
| <b>12</b> Experimental results  | 59   |
| <b>13</b> Some applications   | 62   |
| Problems for chapter 2  | 63   |

## 3 CENTRIFUGAL INSTABILITY

|           |   |            |
|-----------|---|------------|
| <b>14</b> | <b>Introduction</b>   | <b>69</b>  |
| <b>15</b> | <b>Instability of an inviscid fluid</b>   | <b>71</b>  |
|           | Three-dimensional disturbances, 73; Axisymmetric disturbances, 77; Two-dimensional disturbances, 80                                   |            |
| <b>16</b> | <b>Instability of Couette flow of an inviscid fluid</b>   | <b>82</b>  |
| <b>17</b> | <b>The Taylor problem</b>   | <b>88</b>  |
|           | Axisymmetric disturbances, 90; Two-dimensional disturbances, 103; Three-dimensional disturbances, 104; Some experimental results, 104 |            |
| <b>18</b> | <b>The Dean problem</b>   | <b>108</b> |
|           | The Dean problem, 108; The Taylor–Dean problem, 113   |            |
| <b>19</b> | <b>The Görtler problem</b>  | <b>116</b> |
|           | Problems for chapter 3  | 121        |

## 4 PARALLEL SHEAR FLOWS

|           |   |            |
|-----------|---|------------|
| <b>20</b> | <b>Introduction</b>   | <b>124</b> |
|           | <b>The inviscid theory</b>  |            |
| <b>21</b> | <b>The governing equations</b>  | <b>126</b> |
| <b>22</b> | <b>General criteria for instability</b>   | <b>131</b> |
| <b>23</b> | <b>Flows with piecewise-linear velocity profiles</b>  | <b>144</b> |
|           | Unbounded vortex sheet, 145; Unbounded shear layer, 146; Bounded shear layer, 147   |            |
| <b>24</b> | <b>The initial-value problem</b>  | <b>147</b> |
|           | <b>The viscous theory</b>   |            |
| <b>25</b> | <b>The governing equations</b>  | <b>153</b> |
| <b>26</b> | <b>The eigenvalue spectrum for small Reynolds numbers</b>   | <b>158</b> |
|           | A perturbation expansion, 159; Sufficient conditions for stability, 161   |            |
| <b>27</b> | <b>Heuristic methods of approximation</b>   | <b>164</b> |
|           | The reduced equation and the inviscid approximations, 165; The boundary-layer approximation near a rigid wall, 167; The WKBJ approximations, 167; The local turning-point approximations, |            |

|   |     |
|---|-----|
| 171; The truncated equation and Tollmien's improved viscous approximations, 175; The viscous correction to the singular inviscid solution, 177  |     |
| <b>28</b> Approximations to the eigenvalue relation   | 180 |
| Symmetrical flows in a channel, 181; Flows of the boundary-layer type, 183; The boundary-layer approximation to $\phi_3(z)$ , 184; The WKBJ approximation to $\phi_3(z)$ , 185; The local turning-point approximation to $\phi_3(z)$ , 188; Tollmien's improved approximation to $\phi_3(z)$ , 191  |     |
| <b>29</b> The long-wave approximation for unbounded flows   | 196 |
| <b>30</b> Numerical methods of solution   | 202 |
| Expansions in orthogonal functions, 203; Finite-difference methods, 206; Initial-value methods (shooting), 207  |     |
| <b>31</b> Stability characteristics of various basic flows  | 211 |
| Plane Couette flow, 212; Poiseuille flow in a circular pipe, 216; Plane Poiseuille flow, 221; Combined plane Couette and plane Poiseuille flow, 223; The Blasius boundary-layer profile, 224; The asymptotic suction boundary-layer profile, 227; Boundary layers at separation, 229; The Falkner-Skan profiles, 231; The Bickley jet, 233; The hyperbolic-tangent shear layer, 237 |     |
| <b>32</b> Experimental results  | 239 |
| Problems for chapter 4  | 245 |

## 5 UNIFORM ASYMPTOTIC APPROXIMATIONS

|   |     |
|---|-----|
| <b>33</b> Introduction                                  | 251 |
| Plane Couette flow                                      |     |
| <b>34</b> The integral representations of the solutions | 256 |
| <b>35</b> The differential equation method              | 263 |
| General velocity profiles                               |     |
| <b>36</b> A preliminary transformation                  | 265 |

|           |   |            |
|-----------|---|------------|
| <b>37</b> | <b>The inner and outer expansions</b>   | <b>267</b> |
|           | The inner expansions, 268; The outer expansions, 271; The central matching problem, 276; Composite approximations, 278  |            |
| <b>38</b> | <b>Uniform approximations</b>   | <b>280</b> |
|           | The solution of well-balanced type, 280; The solutions of balanced type, 280; The solutions of dominant-recessive type, 283   |            |
| <b>39</b> | <b>A comparison with Lin's theory</b>   | <b>285</b> |
| <b>40</b> | <b>Preliminary simplification of the eigenvalue relation</b>  | <b>290</b> |
| <b>41</b> | <b>The uniform approximation to the eigenvalue relation</b>   | <b>295</b> |
|           | A computational form of the first approximation to the eigenvalue relation, 299; Results for plane Poiseuille flow, 301   |            |
| <b>42</b> | <b>A comparision with the heuristic approximations to the eigenvalue relation</b>   | <b>305</b> |
|           | The local turning-point approximation to $\phi_3(z)$ , 305; Tollmien's improved approximation to $\phi_3(z)$ , 306; The uniform approximation to $\phi_3(z)$ based on the truncated equation, 308; The uniform approximation to $\phi_3(z)$ based on the Orr-Sommerfeld equation, 309 |            |
| <b>43</b> | <b>A numerical treatment of the Orr-Sommerfeld problem using compound matrices</b>  | <b>311</b> |
|           | Symmetrical flows in a channel, 315; Boundary-layer flows, 316  |            |
|           | Problems for chapter 5  | 317        |

## 6 ADDITIONAL TOPICS IN LINEAR STABILITY THEORY

|           |   |            |
|-----------|---|------------|
| <b>44</b> | <b>Instability of parallel flow of a stratified fluid</b>   | <b>320</b> |
|           | Introduction, 320; Internal gravity waves and Rayleigh-Taylor instability, 324; Kelvin-Helmholtz instability, 325 |            |
| <b>45</b> | <b>Baroclinic instability</b>   | <b>333</b> |
| <b>46</b> | <b>Instability of the pinch</b>   | <b>339</b> |
| <b>47</b> | <b>Development of linear instability in time and space</b>  | <b>345</b> |
|           | Initial-value problems, 345; Spatially growing modes, 349   |            |

|           |  |     |
|-----------|--|-----|
| <b>48</b> | Instability of unsteady flows                          | 353 |
|           | Introduction, 353; Instability of periodic flows, 354; |     |
|           | Instability of other unsteady basic flows, 361         |     |
|           | Problems for chapter 6                                 | 363 |

## 7 NONLINEAR STABILITY

|           |  |     |
|-----------|--|-----|
| <b>49</b> | Introduction   | 370 |
|           | Landau's theory, 370; Discussion, 376  |     |
| <b>50</b> | The derivation of ordinary differential systems governing stability  | 380 |
| <b>51</b> | Resonant wave interactions   | 387 |
|           | Internal resonance of a double pendulum, 387;  |     |
|           | Resonant wave interactions, 392  |     |
| <b>52</b> | Fundamental concepts of nonlinear stability  | 398 |
|           | Introduction to ordinary differential equations, 398;  |     |
|           | Introduction to bifurcation theory, 402; Structural stability, 407; Spatial development of nonlinear stability, 416; Critical layers in parallel flow, 420 |     |
| <b>53</b> | Additional fundamental concepts of nonlinear stability   | 423 |
|           | The energy method, 424; Maximum and minimum energy in vortex motion, 432; Application of boundary-layer theory to cellular instability, 434                |     |
| <b>54</b> | Some applications of the nonlinear theory  | 435 |
|           | Bénard convection, 435; Couette flow, 442;   |     |
|           | Parallel shear flows, 450  |     |
|           | Problems for chapter 7   | 458 |

APPENDIX. A CLASS OF  
GENERALIZED AIRY FUNCTIONS

|           |   |     |
|-----------|---|-----|
| <b>A1</b> | The Airy functions $A_k(z)$   | 465 |
| <b>A2</b> | The functions $A_k(z, p)$ , $B_0(z, p)$ and $B_k(z, p)$               | 466 |
| <b>A3</b> | The functions $A_k(z, p, q)$ and $B_k(z, p, q)$                       | 472 |
| <b>A4</b> | The zeros of $A_1(z, p)$  | 477 |
|           | Addendum: Weakly non-parallel theories for the Blasius boundary layer | 479 |
|           | <i>Solutions</i>  | 481 |
|           | <i>Bibliography and author index</i>                                  | 559 |
|           | <i>Motion picture index</i>   | 595 |
|           | <i>Subject index</i>  | 597 |
