List of Symbols *xvii*

1

INTRODUCTION 1

- 1.1 Fundamental Concepts 1
 - 1.1.1 Heat Transfer 1
 - 1.1.2 Temperature 2
 - 1.1.3 Specific Heats 5
- 1.2 The Objective of Heat Transfer 6
- 1.3 Conduction 7
 - 1.3.1 The Fourier Law 7
 - 1.3.2 Thermal Conductivity 10
 - 1.3.3 Cartesian Coordinates 15
 - 1.3.4. Cylindrical Coordinates 16
 - 1.3.5 Spherical Coordinates 18
 - 1.3.6 Initial and Boundary Conditions 19
- 1.4 Convection 21
- 1.5 Radiation 27
- References 28
- Problems 29

2

UNIDIRECTIONAL STEADY CONDUCTION 32

- 2.1 Thin Walls 32
 - 2.1.1 Thermal Resistance 32
 - 2.1.2 Composite Walls 34
 - 2.1.3 Overall Heat Transfer Coefficient 35

- 2.2 Cylindrical Shells 38
- 2.3 Spherical Shells 41
- 2.4 Critical Insulation Radius 42
- 2.5 Variable Thermal Conductivity 45
- 2.6 Internal Heat Generation 47
 - 2.6.1 Uniform Heating 47
 - 2.6.2 Temperature-Dependent Heating: The Integral Method 50
- 2.7 Extended Surfaces (Fins) 52
 - 2.7.1 The Enhancement of Heat Transfer 52
 - 2.7.2 Constant Cross-Sectional Area 53
 - 2.7.3 Variable Cross-Sectional Area 62
 - 2.7.4 When the Unidirectional Conduction Model is Valid 64
 - 2.7.5 Optimization Subject to Volume Constraint 65
- 2.8 Extended Surfaces with Relative Motion and Internal Heat Generation 69
 - 2.8.1 The General Conduction Equation 69
 - 2.8.2 Plastics Extrusion and Wire Drawing 70
 - 2.8.3 Electrical Cables 72
- References 73
- Problems 74

3

MULTIDIRECTIONAL STEADY CONDUCTION 91

- 3.1 Analytical Solutions 91
 - 3.1.1 Two-Dimensional Conduction in Cartesian Coordinates 91
 - 3.1.2 Heat Flux Boundary Conditions 99
 - 3.1.3 Superposition of Solutions 103
 - 3.1.4 Cylindrical Coordinates 105
 - 3.1.5 Three-Dimensional Conduction in Cartesian Coordinates 108
- 3.2 Approximate Methods 109
 - 3.2.1 The Integral Method 109
 - 3.2.2 The Method of Scale Analysis 111
 - 3.2.3 The Graphic Method 112
- 3.3 Numerical Methods 120
 - 3.3.1 Finite-Difference Conduction Equations 120
 - 3.3.2 The Matrix Inversion Method 125
 - 3.3.3 The Gauss-Seidel Iteration Method 127
- References 129
- Problems 130
- Projects 140

4

TIME-DEPENDENT CONDUCTION 143

- 4.1 The Immersion Cooling or Heating of a Conducting Body 143
- 4.2 The Lumped Capacitance Model (the "Late" Regime) 146
- 4.3 The Semi-infinite Solid Model (the "Early" Regime) 148
 - 4.3.1 Constant Surface Temperature 148
 - 4.3.2 Constant Heat Flux Surface 151
 - 4.3.3 Surface in Contact with Fluid 151
- 4.4 Unidirectional Conduction 156
 - 4.4.1 The Constant-Thickness Plate 156
 - 4.4.2 The Long Cylinder 162
 - 4.4.3 The Sphere 163
 - 4.4.4 Plate, Cylinder, and Sphere with Fixed Surface Temperature 167
- 4.5 Multidirectional Conduction 172

- 4.6 Concentrated Sources and Sinks 177
 - 4.6.1 Instantaneous (One-Shot) Sources and Sinks 177
 - 4.6.2 Persistent (Continuous) Sources and Sinks 180
 - 4.6.3 Moving Heat Sources 182
- 4.7 Melting and Solidification 184
- 4.8 Numerical Methods 190
 - 4.8.1 Discretization in Time and Space 190
 - 4.8.2 The Explicit Method 191
 - 4.8.3 The Implicit Method 196
- References 200
- Problems 201
- Projects 211

5

EXTERNAL FORCED CONVECTION 216

- 5.1 Classification of Convection Configurations 216
- 5.2 Basic Principles of Convection 219
 - 5.2.1 The Mass Conservation Equation 219
 - 5.2.2 The Momentum Equations 220
 - 5.2.3 The Energy Equation 227
- 5.3 Laminar Boundary Layer Over a Plane Wall 231
 - 5.3.1 The Velocity Boundary Layer 231
 - 5.3.2 The Thermal Boundary Layer (Isothermal Wall) 240
 - 5.3.3 Nonisothermal Wall Conditions 244
 - 5.3.4 Film Temperature 246
- 5.4 Turbulent Boundary Layer over a Plane Wall 248
 - 5.4.1 Transition from Laminar to Turbulent Flow 248
 - 5.4.2 Time-Averaged Equations 250
 - 5.4.3 Eddy Diffusivities 253
 - 5.4.4 Wall Friction 255
 - 5.4.5 Heat Transfer 259
- 5.5 Other External Flows 263
 - 5.5.1 Single Cylinder in Cross-Flow 263
 - 5.5.2 Sphere 268
 - 5.5.3 Other Body Shapes 269
 - 5.5.4 Arrays of Cylinders in Cross-Flow 270
 - 5.5.5 Turbulent Jets 273

Projects 287

6

INTERNAL FORCED CONVECTION 290

6.1 Laminar Flow Through a Duct 290

6.1.1 The Flow Entrance Region 290

6.1.2 The Fully Developed Flow
Region 292

6.1.3 Friction Factor and Pressure
Drop 295

6.2 Heat Transfer in Laminar Flow 299

6.2.1 The Thermal Entrance
Region 299

6.2.2 The Thermally Fully Developed
Region 300

6.2.3 Uniform Wall Heat Flux 303

6.2.4 Isothermal Wall 305

6.3 Turbulent Flow 309

6.3.1 Transition, Entrance Region,
and Fully Developed Flow 309

6.3.2 Friction Factor and Pressure
Drop 312

6.3.3 Heat Transfer Coefficient 314

6.4 The Total Heat Transfer Rate 318

Projects 329

7

NATURAL CONVECTION 335

7.1 What Drives the Natural Convection Flow? 335

7.2 Boundary Layer Flow Along a Vertical Wall 336

7.2.1 The Boundary Layer-Simplified
Equations 336

7.2.2 Scale Analysis of the Laminar
Regime 340

7.2.3 Isothermal Wall (Laminar
Flow) 345

7.2.4 Transition and the Effect of
Turbulence on Heat Transfer 349

7.2.5 Uniform Wall Heat Flux 352

7.3 Other External Flow Configurations 354

7.3.1 Thermally Stratified Fluid
Reservoir 354

7.3.2 Inclined Walls 355

7.3.3 Horizontal Walls 357

7.3.4 Horizontal Cylinder 359

7.3.5 Sphere 361

7.3.6 Vertical Cylinder 361

7.3.7 Other Immersed Bodies 362

7.4 Internal Flow

Configurations 365

7.4.1 Vertical Channels 365

7.4.2 Enclosures Heated from the
Side 368

7.4.3 Enclosures Heated from
Below 371

7.4.4 Inclined Enclosures 375

7.4.5 Annular Space Between
Horizontal Cylinders 377

7.4.6 Annular Space Between
Concentric Spheres 378

8

CONVECTION WITH CHANGE OF PHASE 398

8.1 Condensation Heat Transfer 398

8.1.1 Laminar Film on a Vertical
Surface 398

8.1.2 Turbulent Film on a Vertical
Surface 406

8.1.3 Film Condensation in Other
Configurations 409

8.1.4 Dropwise and Direct-Contact
Condensation 416

8.2 Boiling Heat Transfer 419

8.2.1 Pool Boiling Regimes 419

8.2.2 Nucleate Boiling and Peak Heat
Flux 424

8.2.3 Film Boiling and Minimum Heat
Flux 428

8.2.4 Flow Boiling 432

9

HEAT EXCHANGERS 444

9.1 Classification of Heat Exchangers 444

9.2 Overall Heat Transfer Coefficient 452

- 9.3 The Log-Mean Temperature Difference Method 458
 - 9.3.1 Parallel Flow 458
 - 9.3.2 Counterflow 460
 - 9.3.3 Other Flow Arrangements 460
- 9.4 The Effectiveness-*NTU* Method 468
 - 9.4.1 Effectiveness and Limitations Posed by the Second Law 468
 - 9.4.2 Parallel Flow 470
 - 9.4.3 Counterflow 472
 - 9.4.4 Other Flow Arrangements 472
- 9.5 Pressure Drop 479
 - 9.5.1 Pumping Power 479
 - 9.5.2 Abrupt Contraction and Enlargement 480
 - 9.5.3 Acceleration and Deceleration 485
 - 9.5.4 Tube Bundles in Cross-Flow 486
 - 9.5.5 Compact Heat Exchanger Surfaces 487
- References 492

- Projects 499

10 RADIATION 505

- 10.1 Introduction 505
- 10.2 Blackbody Radiation 506
 - 10.2.1 Definitions 506
 - 10.2.2 Temperature and Energy 508
 - 10.2.3 Intensity 511
 - 10.2.4 Emissive Power 512
- 10.3 Heat Transfer Between Black Surfaces 519
 - 10.3.1 The Geometric View Factor 519
 - 10.3.2 Relations Between View Factors 524
 - 10.3.3 Two-Surface Enclosures 526
- 10.4 Diffuse-Gray Surfaces 530
 - 10.4.1 Emissivity 530
 - 10.4.2 Absorptivity and Reflectivity 533
 - 10.4.3 Kirchhoff's Law 540
 - 10.4.4 Two-Surface Enclosures 543
 - 10.4.5 Enclosures with More Than Two Surfaces 547
- 10.5 Participating Media 551
 - 10.5.1 Volumetric Absorption 551

- 10.5.2 Gas Emissivities and Absorptivities 553
- 10.5.3 Gas Surrounded by Black Surface 559
- 10.5.4 Gray Medium Surrounded by Diffuse-Gray Surfaces 560

11 MASS TRANSFER PRINCIPLES 576

- 11.1 The Analogy Between Mass Transfer and Heat Transfer 576
- 11.2 The Conservation of Chemical Species 578
 - 11.2.1 Species Velocity Versus Bulk Velocity 578
 - 11.2.2 Diffusion Mass Flux 580
 - 11.2.3 Fick's Law 581
 - 11.2.4 Molar Concentration and Molar Flux 582
- 11.3 Diffusion Through a Stationary Medium 584
 - 11.3.1 Steady Diffusion 584
 - 11.3.2 Mass Diffusivities 587
 - 11.3.3 Boundary Conditions 591
 - 11.3.4 Time-Dependent Diffusion 594
- 11.4 Convection 597
 - 11.4.1 Forced Convection in Laminar Boundary Layer Flow 597
 - 11.4.2 The Impermeable Surface Model 601
 - 11.4.3 Other External Forced-Convection Configurations 605
 - 11.4.4 Internal Forced Convection 607
 - 11.4.5 Natural Convection 609
