List of Tables xvi

Preface xvii

Acknowledgment xxi

Contributing Authors xxiii

Part I INTRODUCTION

1
Maintenance Modeling Areas 3
M. Ben-Daya and S. O. Duffuaa
1. Introduction 3
2. Maintenance Policies 4
3. Maintenance Planning and Scheduling 14
4. Spare Parts Provisioning 17
5. Integrated Models 23
6. Future Research Directions 26

Part II MAINTENANACE PLANNING & SCHEDULING

2
Mathematical Models in Maintenance Planning and Scheduling 39
Salih O. Duffuaa
1. Introduction 39
2. Maintenance Capacity Planning 40
3. Allocation of Resources 44
4. Scheduling Preventive Maintenance 45
5. Scheduling Maintenance Jobs 46

6. Conclusion and Further Research 52

3
Electric Generator Maintenance Scheduling 55
Ibrahim El-Amin
1. Introduction 56
2. Maintenance Goals and Model Formulation 58
3. Solution Methods 69
4. The Application of Fuzzy Systems to the GMS Problem 75
5. The Integrated Generation & Transmission Maintenance Schedule 76
6. Conclusions 77

4
Reliability Based Spare Parts Forecasting and Procurement Strategies 81
A. K. Sheikh, M. Younas and A. Raouf
1. Introduction 82
2. Scope of the Work 84
3. Reliability Characteristics of the Unit 86
4. Spare Parts Calculations for Failure Replacement 90
5. Spare Part Calculations for Scheduled Replacements 96
6. Purchasing and Maintenance Link 98
7. Spare Part Classification 99
8. Practical Spare Parts Management 100
9. Extending the Ideas to Repairable Systems 106
10. Concluding Remarks 107

5
Maintenance Service Contracts 111
D. N. P. Murthy
1. Introduction 111
2. Maintenance 113
3. Warranty and Extended Warranty 115
4. Maintenance Service Contracts 120
5. Mathematical Modeling of Service Contracts 124
6. Conclusions and Topics of Future Research 130

6
Simulation Metamodeling of a Maintenance Float System 133
Christian N. Madu
1. Introduction 133
2. Maintenance Float Systems 135
3. The Metamodel 141
4. Cost Optimization 146
5. Steps for Developing a Metamodel 148
6. Conclusion 149

Part III PREVENTIVE MAINTENANCE

7
Basic Preventive Maintenance Policies and their Variations 155

T. Dohi, N. Kaio, and S. Osaki
1. Introduction 155
2. Mathematical Preliminaries 157
3. Block Replacement 162
4. Age Replacement 168
5. Order Replacement 173
6. Conclusion 177

8
A General Framework for Analyzing Maintenance Policies 185
V. Makis, X Jiang, A.K.S. Jardine and K. Cheng
1. Introduction 186
2. Background 186
3. The Average Cost Optimal Policy for a Repair/Replacement Problem 189
4. Optimal Policy in the Discounted Cost Case 195

9
Imperfect Preventive Maintenance Models 201
Toshio Nakagawa
1. Introduction 201
2. Analysis of Policy 1 203
3. Analysis of Policy 2 206
4. Analysis of Policy 3 209
5. Conclusions 211

10
Single Machine Inspection Problem 215
Moncer Hariga Mohammad A. Al-Fawzan
1. Introduction 216
2. Notation, Assumptions, and Preliminary Results 217
3. Infinite Horizon Model 220
4. Finite Horizon Model with Continuous Inspection Times 231
5. Finite Horizon Model with Discrete Inspection Time 237
6. Random Horizon Model 239
7. Conclusions 241

11
A General Approach for the Coordination of Maintenance Frequencies 245
R. Dekker, R.E. Wildeman, J.B.G. Frenk and R. Van Egmond
1. Introduction 245
2. Problem Definition 247
3. Analysis of the Problem 250
4. Solving Problem (Q) 256
5. Numerical Results 268
6. Conclusions 272

12
Maintenance Grouping in Production Systems 283
Gerhard van Dijkhuizen
1. Introduction 283

2. Literature Review 287
3. A Multi-Setup Multi-Component Production System 290
4. Modeling Framework 293
5. A Mixed Integer Linear Programming Formulation 297
6. An Illustrative Example 300
7. Concluding Remarks 301

Part IV CONDITION BASED MAINTENANCE

13
On-Line Surveillance and Monitoring 309
Hai S. Jeong Elsayed A. Elsayed
1. Introduction 309
2. Reliability Prediction and The Limit Value Determination in Condition Monitoring 311
3. Vibration Monitoring 317
4. Sound Recognition and Acoustic Emission 325
5. Temperature Monitoring 330
6. Fluid Monitoring 331
7. Corrosion Monitoring 333
8. New Approaches in Condition Monitoring 333
9. Conclusions 336

14
Maintenance Scheduling Using Monitored Parameter Values 345
Dhananjay Kumar
1. Introduction 346
2. Reliability Models 347
3. Proportional Hazards Model 348
4. Proportional Intensity Model 349
5. Accelerated Failure Time Models 351
6. Some Other Models 351
7. Selection of Models 352
8. Maintenance Scheduling under the Age Replacement Policy 353
9. Total Time on Test (TTT)-Plotting 355
10. Example 358
11. Maintenance Scheduling under the Block replacement Policy 362
12. Example 364
13. Conclusions 370

Part V INTEGRATED MAINTENANCE, PRODUCTION AND QUALITY MODELS

15
A General EMQ Model with Machine Breakdowns 377
V. Makis, X. Jiang and E. Tse
1. Introduction 378
2. Model Description 380
3. The Structure of the Optimal Policy 380
4. An EMQ Model With Lost Sales 383
5. Numerical Example 388

6. Model With Preventive Replacement After the First Production Run 394
7. Conclusions 395

16
Stochastic Manufacturing Systems: Production and Maintenance Control 397
E. K. Boukas Q. Zhang
1. Introduction 397
2. Production Control Problem 399
3. Production and Corrective Maintenance Control 414
4. Production and Preventive Maintenance Control 419
5. Numerical Methods and Examples 422
6. Conclusion 428

Part VI MAINTENANCE & NEW TECHNOLOGIES

17
JIT and Maintenance 439
G. Waeyenbergh, L. Pintelon, and L. Gelders
1. Introduction 440
2. The JIT-Philosophy 440
3. Maintenance Meets Production 441
4. From Preventive Maintenance to Productive Maintenance 444
5. The TPM-Philosophy 445
6. The Pillars of TPM 447
7. The Need for Supporting Maintenance Concepts 450
8. The Ideal Base to Start With TPM 455
9. Modeling Tools for Improved Maintenance 457
10. Illustrative case: Failure Analysis and TPM in a Brewery 465
11. Conclusions 467

Index 471
