

## CONTENTS

1	Executive Summary
5	<b>CHAPTER 1 Background</b>
5	Renewal Focus Area
5	Problem Statement
5	Research Objectives
6	<b>CHAPTER 2 Methodology</b>
6	Literature Review
6	Surveys and Workshop
6	Development of Testing Matrix
7	Laboratory Analyses
7	Field Verification
7	Data Analysis Methods
8	Repeatability and Reproducibility of Test Results
8	Project Deliverables
9	References
10	<b>CHAPTER 3 Findings and Applications</b>
10	Review of Spectroscopic Applications to Construction Materials
13	Survey and Workshop Results
15	Fingerprinting of Pure Materials
18	Identification and Quantification of Additives and Contaminants in Complex Materials
32	Reliability of Portable Spectroscopic Measurements
36	Field Verification of Laboratory Results
38	Summary of Technical Performance of Portable Instruments
38	Reference
39	<b>CHAPTER 4 Conclusions and Suggested Research</b>
39	Applicability of Portable Spectroscopic Equipment to Field Evaluation of Construction Materials
40	Project Deliverables
40	Further Research
41	<b>Appendix A</b> Laboratory Equipment and Testing Protocols
56	<b>Appendix B</b> Generic Spectroscopic Testing Procedures
60	<b>Appendix C</b> Proposed AASHTO Standards of Practice
67	<b>Appendix D</b> Field Operation Manuals
71	<b>Appendices E–Q</b>
