Part 1

State of the art of robots for endoscopy

1. Robotics in surgery and clinical application

Giovanni Dapri

1.1	Introduction	3
1.2	Robot-assisted minimally invasive surgery (RAMIS)	4
1.2.1	Senhance® Surgical Robotic System	7
1.2.2	Flex® Robotic System	8
1.2.3	Auris® Robotic Endoscopy System (ARES)	12
1.2.4	University of Nebraska laparoscopic single-incision robot	12
1.2.5	SPORT® Surgical System	13
1.2.6	Mazor robotics	15
1.2.7	Einstein	16
1.2.8	Verb surgical	16
1.2.9	FreeHand	17
1.2.10	Stiffness controllable flexible and learnable manipulator for surgical operations (STIFF-FLOP)	18
1.2.11	A miniature robot for retraction tasks under vision assistance in MIS	18
1.3	Clinical applications	19
1.4	Conclusions	20
	References	21

2. Artificial intelligence for medical robotics

Erwin Loh and Tam Nguyen

2.1	Background	23
2.1.1	Eye surgery	24
2.1.2	Neurosurgery	24

2.1.3	Cardiac Surgery	24
2.1.4	Orthopedic surgery	24
2.1.5	Minimally invasive surgery (MIS)	25
2.2	AI in robotic surgery	25
2.3	AI in diagnosis (pathology/radiology systems)	25
2.4	AI in virtual reality (VR) and simulation	26
2.5	AI in teaching and training	26
2.6	AI in surgical planning and robotic-assisted surgery	27
2.7	Limitations	27
2.8	Conclusions	28
	References	29
3.	Colonoscopy robots	
	<i>Yu Huan and Gastone Ciuti</i>	
3.1	Introduction	31
3.2	Commercially certified robotic colonoscopes	33
3.3	Research-oriented colonoscopy robots	39
3.4	AI in colonoscopy	48
3.5	Discussion and conclusions: What is now and what's next?	51
	Acknowledgments	53
	Conflicts of interest	53
	References	53
4.	Soft robotic systems for endoscopic interventions	
	<i>Sara-Adela Abad, Alberto Arezzo, Shervanthi Homer-Vanniasinkam, and Helge A Wurdemann</i>	
4.1	Introduction	61
4.2	Overview of endoscopic procedures	63
4.2.1	Visual examination and diagnostic procedures	63
4.2.2	Endoscopic treatments	67
4.3	Review of commercially available solutions for endoscopic procedures	69
4.3.1	Instruments for optical examination	69
4.3.2	Instruments for therapeutic endoscopy	70
4.3.3	Challenges in current endoscopic interventions	77
4.4	Soft robotic systems for endoscopic procedures: State-of-the-art in research	78
4.4.1	Soft robotic instruments for optical examination	80
4.4.2	Soft robotic instruments for therapeutic endoscopy	82
4.4.3	Soft haptic technologies for minimally invasive endoscopic procedures	83
4.4.4	Technical challenges for emerging soft robotic, endoscopic tools	84

4.5	Conclusions and potential opportunities for endoscopic soft robotic systems	86
	Acknowledgment	87
	References	87
5.	Simulators	
	<i>Andrea Moglia</i>	
5.1	Introduction	95
5.2	Required skills for MAS	96
5.3	Human factors	96
5.4	Training: aviation vs surgery	96
5.5	Types of surgical simulators	97
5.5.1	Animal tissues	97
5.5.2	Synthetic models	97
5.5.3	Cadaver tissues	97
5.5.4	Virtual reality simulators	97
5.6	VR simulators for RALS	98
5.6.1	da Vinci Skills Simulator	98
5.6.2	dV-Trainer	98
5.6.3	Robotic Surgical Simulator	100
5.6.4	RobotiX Mentor	101
5.7	Evidence from the published literature	102
5.8	Curriculum	104
5.8.1	Fundamentals of Robotic Surgery	107
5.8.2	Robotic Training Network	107
5.8.3	Society of European Robotic Gynaecological Surgery	108
5.8.4	European Society of Thoracic Surgeons and European Association for Cardio-Thoracic Surgery	108
5.8.5	European Association of Urology Robotic Urology Section	108
5.8.6	Morristown protocol	108
5.8.7	Curriculum on pancreaticoduodenectomy	109
5.9	Future research	109
	References	110

Part 2

Materials and engineering design

6. Smart materials for mini-actuators

Gianluca Rizzello and Paul Motzki

6.1	Introduction	117
6.2	Shape memory alloy (SMA)	119
6.2.1	SMA material operating principle	119

6.2.2	SMA actuators	122
6.2.3	SMA applications in the biomedical field	127
6.3	Dielectric elastomer (DE)	137
6.3.1	DE material operating principle	137
6.3.2	DE actuators	140
6.3.3	DE applications in the biomedical field	146
6.4	Conclusions	155
	References	156
7.	Fabrication of endoluminal medical devices	
	<i>Mario Milazzo and Cesare Stefanini</i>	
7.1	Introduction	165
7.2	Developing endoluminal devices: From scaling laws to the fabrication	167
7.2.1	Scale-related issues: Physical laws	168
7.2.2	Reusability issues for endoluminal devices	170
7.2.3	Fabrication technologies for endoluminal devices	171
7.2.4	Micromachining	171
7.2.5	Additive manufacturing technologies: From 3D to 4D printing	173
7.2.6	Electro-discharge machining	174
7.2.7	Injection molding	174
7.2.8	Laser-based machining	174
7.3	Applications of endoluminal microdevices	174
7.3.1	Rigid systems	175
7.3.2	Articulated assemblies	177
7.3.3	Flexible tethered system	178
7.3.4	Wireless devices	180
7.4	Conclusions and future outlook	181
	Acknowledgments	183
	References	184
8.	Modeling and control strategies for flexible devices	
	<i>M. Taha Chikhaoui and Benoît Rosa</i>	
8.1	Introduction	187
8.2	Modeling of continuum robots	188
8.2.1	Geometry-based modeling	190
8.2.2	Mechanics-based modeling	191
8.2.3	Data-based models	194
8.2.4	Challenges and future directions	196
8.3	Control strategies	196
8.3.1	End-effector control	197
8.3.2	Multiobjective control	201

8.3.3	Recent trends	203
8.3.4	Discussions	205
8.4	Conclusions	206
	References	207

9. Ultrasound technology for capsule endoscopy

*Alexandru C. Moldovan, Mihnea V. Turcanu,
Srinjoy Mitra, and Sandy Cochran*

9.1	Introduction	215
9.2	Medical ultrasound technology	216
9.2.1	Ultrasonic transducers	216
9.2.2	Ultrasound electronics	219
9.2.3	Diagnostic USCE energy consumption and self-heating	220
9.2.4	Therapeutic technologies	221
9.2.5	Robotic capsules	222
9.3	USCE for diagnostic ultrasound imaging	222
9.3.1	Imaging geometries	223
9.3.2	Single-element transducers	223
9.3.3	Transducer arrays	228
9.4	USCE for ultrasound therapy	230
9.4.1	Technologies	230
9.4.2	Single-element transducers	231
9.4.3	Transducer arrays	233
9.5	Future developments	233
9.5.1	Diagnosis	233
9.5.2	Therapy	234
9.5.3	Hybridized multimodal USCE devices	235
9.6	Conclusions	236
	References	236

10. Modeling of capsule-intestine contact

Yang Liu, Jiyuan Tian, Bingyong Guo, and Shyam Prasad

10.1	Introduction	241
10.2	Mathematical modeling of capsule-intestine contact	242
10.2.1	Mode 1	243
10.2.2	Mode 2	244
10.2.3	Mode 3	245
10.3	Finite element modeling of capsule-intestine contact	247
10.3.1	Mode 1	247
10.3.2	Mode 2	249
10.3.3	Mode 3	249
10.4	Results and analysis	250
10.5	Conclusions	254
	References	254

11. Haptic interfaces

Peter P. Pott

11.1	Human haptic perception	257
11.1.1	Introduction	257
11.1.2	Anatomic and physiologic background	258
11.1.3	Quantifying senses	260
11.2	Engineering	264
11.2.1	Impedance	264
11.2.2	Haptic transparency	264
11.2.3	One kHz as the engineering goal of a haptic system	265
11.3	Haptic input devices	265
11.3.1	History and state of the art	265
11.3.2	Haptic feedback systems	266
11.3.3	Tactile feedback systems	268
11.3.4	Summary	271
11.4	Pseudohaptics	271
11.4.1	Acceleration mapping	271
11.4.2	Displacement-force mapping	271
	References	273

12. Case study of vision systems: Optimized compression architecture for wireless endorobots

Abdelkrim Zitouni, Nedra Jarray, and Majdi Elhajji

12.1	Introduction	275
12.2	Related works	276
12.3	Architecture design	278
12.3.1	Compression step	278
12.3.2	Coding step	282
12.3.3	Communication step	283
12.4	Experimental results	284
12.4.1	PSNR and CR results relative to standard algorithms	286
12.4.2	PSNR and CR results relative to related works	286
12.4.3	FPGA synthesis results	288
12.5	Conclusions	290
	References	291

Part 3

Ethics, regulation, and project management

13. Regulating endorobots in the European Union: An overview of the ethical and legal framework

Federico Costantini and Fabio Balducci Romano

13.1	Introduction	297
------	---------------------	-----

13.2	Ethics and technology: Endorobots as “social robots”	300
13.2.1	Roboethics: Between “machine ethics” and “engineering ethics”	301
13.2.2	Three perspectives in “engineering ethics”	302
13.2.3	Final remarks on “roboethics”	305
13.3	Legal framework of endorobots in the European Union	305
13.3.1	EU regulation on medical devices	306
13.3.2	The challenging definition of medical devices	308
13.3.3	The allocation of liability for endorobots	309
13.3.4	Final remarks on the legal framework	311
13.4	Conclusions	312
	Author contributions	312
	References	312
14.	Healthcare data governance in the EU: Main challenges in personal data protection	
	<i>Federico Costantini and Giada Soncini</i>	
14.1	Introduction: Healthcare data and endorobots	319
14.2	An overview of healthcare data governance in the European Union	320
14.2.1	Confidentiality and information security	321
14.2.2	Openness and transparency: “Open data” and “non-personal data”	323
14.3	Personal data	325
14.3.1	Personal data protection issues before data collection	327
14.3.2	Personal data protection issues after collection	330
14.4	Conclusions	331
	Author contributions	332
	References	333
15.	Project management	
	<i>Pietro Raffaini and Luigi Manfredi</i>	
15.1	Introduction	337
15.2	Literature review and project management (PM) technique	338
15.2.1	Iron triangle and project performance	338
15.2.2	Gantt chart	341
15.2.3	Critical path method (CPM)	343
15.2.4	The project evaluation and review technique (PERT) chart	343
15.2.5	Comparison between PERT, Gantt, and CPM	345
15.3	Internal and external factors influencing PM, organizations management, and technology readiness level	346
15.3.1	Stakeholders	346

15.3.2	Product development and management association (PDMA)	347
15.3.3	Workgroup, team, functional, and cross-functional team	347
15.3.4	Management strategies in medical devices	348
15.4	Technology readiness level (TRL)	351
15.5	Applications	353
15.6	Conclusions	356
	References	357
16.	Future trends	
	<i>Luigi Manfredi</i>	
16.1	Introduction	359
16.2	Design approach: Tethered vs. untethered	361
16.3	Anatomy	361
16.3.1	Gastrointestinal (GI) tract	362
16.3.2	The respiratory system	363
16.3.3	The circulatory system	364
16.3.4	The central nervous system	364
16.3.5	The urinary system and the prostate	365
16.3.6	The visual system	365
16.3.7	The auditory system	366
16.3.8	The fetus	367
16.4	Challenges ahead: AI & ML, miniaturization of smart materials, ethics, and regulations	367
16.4.1	AI & ML	367
16.4.2	Smart materials	369
16.4.3	Ethics and regulations	369
16.4.4	Usability	369
16.4.5	Commercial challenges	370
16.5	Conclusions	371
	References	372
	Index	379
