

Table of Contents

Dedication	v
Foreword	xiii
Preface	xv
Notation	1
1. Introduction	5
1.1 Similarity and case-based reasoning	5
1.2 Objective of this book	6
1.2.1 Making case-based inference more reliable	9
1.2.2 The important role of models	10
1.2.3 Formal models of case-based inference	11
1.3 Overview	13
2. Similarity and Case-Based Inference	17
2.1 Model-based and instance-based approaches	17
2.1.1 Model-based approaches	18
2.1.2 Instance-based approaches	19
2.1.3 Knowledge representation	19
2.1.4 Performance in generalization	20
2.1.5 Computational complexity	21
2.2 Similarity-based methods	22
2.2.1 Nearest neighbor (NN) estimation	22
2.2.2 Instance-based learning	29
2.2.3 Case-based reasoning	30

2.3	The concept of similarity	33
2.3.1	Similarity in case-based reasoning	33
2.3.2	Similarity and fuzzy sets	37
2.3.3	Aggregation of local similarity measures	38
2.4	Case-based inference	41
2.4.1	Deterministic inference problems	45
2.4.2	Non-deterministic inference problems	48
2.4.3	Formal models of case-based inference	52
2.5	Summary and remarks	53
3.	Constraint-Based Modeling of Case-Based Inference	59
3.1	Basic concepts	59
3.1.1	Similarity profiles and hypotheses	59
3.1.2	Generalized similarity profiles	62
3.2	Constraint-based inference	65
3.2.1	A constraint-based inference scheme	65
3.2.2	Non-deterministic problems	69
3.3	Case-based approximation	72
3.3.1	Properties of case-based approximation	73
3.3.2	Local similarity profiles	79
3.4	Learning similarity hypotheses	81
3.4.1	The learning task	81
3.4.2	A learning algorithm	85
3.4.3	Properties of case-based learning	86
3.4.4	Experimental results	94
3.5	Application to statistical inference	97
3.5.1	Case-based parameter estimation	97
3.5.2	Case-based prior elicitation	98
3.6	Summary and remarks	99
4.	Probabilistic Modeling of Case-Based Inference	103
4.1	Basic probabilistic concepts	106
4.1.1	Probabilistic similarity profiles and hypotheses	107

4.1.2	Generalized probabilistic profiles	110
4.2	Case-based inference, probabilistic reasoning, and statistical inference	112
4.3	Learning probabilistic similarity hypotheses	117
4.3.1	Simple hypotheses and credible case-based inference	117
4.3.2	Extended case-based learning	118
4.4	Experiments with regression and label ranking	121
4.4.1	Regression: artificial data	122
4.4.2	Regression: real-world data	124
4.4.3	Label ranking	126
4.5	Case-based inference as evidential reasoning	129
4.5.1	Transformation of probabilistic evidence	131
4.5.2	Inference from individual cases	133
4.5.3	Combining evidence from several cases	134
4.6	Assessment of cases	140
4.6.1	Similarity-weighted approximation	140
4.6.2	More general criteria	142
4.6.3	Assessment of individual cases	144
4.7	Complex similarity hypotheses	146
4.7.1	Inference schemes of higher order	147
4.7.2	Partially admissible profiles	150
4.8	Approximate probabilistic inference	152
4.8.1	Generalized uncertainty measures and profiles	152
4.8.2	An approximate inference scheme	155
4.9	Summary and remarks	159
5.	Fuzzy Set-Based Modeling of Case-Based Inference I	165
5.1	Background on possibility theory	165
5.1.1	Possibility distributions as generalized constraints	166
5.1.2	Possibility as evidential support	168
5.2	Fuzzy rule-based modeling of the CBI hypothesis	169
5.2.1	Possibility rules	170
5.2.2	Modeling the CBI hypothesis	171
5.3	Generalized possibilistic prediction	176

5.3.1	Control of compensation and accumulation of support	177
5.3.2	Possibilistic support and weighted NN estimation	178
5.3.3	Upper and lower possibility bounds	179
5.3.4	Fuzzy logical evaluation	180
5.3.5	Comparison of extrapolation principles	181
5.3.6	From predictions to decisions	186
5.3.7	An illustrative example	188
5.3.8	Complexity issues	191
5.4	Extensions of the basic model	191
5.4.1	Dealing with incomplete information	192
5.4.2	Discounting noisy and atypical instances	194
5.4.3	From instances to rules	198
5.4.4	Modified possibility rules	200
5.4.5	Combination of several rules	202
5.4.6	Locally restricted extrapolation	204
5.4.7	Incorporation of background knowledge	205
5.5	Experimental studies	206
5.5.1	Preliminaries	206
5.5.2	Classification accuracy	207
5.5.3	Statistical assumptions and robustness	209
5.5.4	Variation of the aggregation operator	210
5.5.5	Representation of uncertainty	211
5.6	Calibration of CBI models	212
5.7	Relations to other fields	219
5.7.1	Fuzzy and possibilistic data analysis	219
5.7.2	Fuzzy set-based approximate reasoning	222
5.8	Summary and remarks	224
6.	Fuzzy Set-Based Modeling of Case-Based Inference II	229
6.1	Gradual inference rules	230
6.1.1	The basic model	230
6.1.2	Modification of gradual rules	232
6.2	Certainty rules	235

6.3 Cases as information sources	239
6.3.1 A probabilistic model	239
6.3.2 Combination of information sources	241
6.4 Exceptionality and assessment of cases	243
6.5 Local rules	247
6.6 Summary and remarks	249
7. Case-Based Decision Making	253
7.1 Case-based decision theory	255
7.2 Nearest Neighbor decisions	258
7.2.1 Nearest Neighbor classification and decision making	258
7.2.2 Nearest Neighbor decision rules	260
7.2.3 An axiomatic characterization	261
7.3 Fuzzy modeling of case-based decisions	265
7.3.1 Basic measures for act evaluation	266
7.3.2 Modification of the basic measures	267
7.3.3 Interpretation of the decision criteria	268
7.4 Fuzzy quantification in act evaluation	270
7.5 A CBI framework of CBDM	274
7.5.1 Generalized decision-theoretic setups	274
7.5.2 Decision making using belief functions	277
7.5.3 Possibilistic decision making	279
7.6 CBDM models: A discussion of selected issues	282
7.6.1 The relation between similarity, preference, and belief	282
7.6.2 The effect of observed cases	285
7.6.3 Dynamic aspects of decision making	286
7.7 Experience-based decision making	287
7.7.1 Compiled decision models	290
7.7.2 Satisficing decision trees	292
7.7.3 Experimental evaluation	296
7.8 Summary and remarks	301

8. Conclusions and Outlook	307
A. Possibilistic Dominance in Qualitative Decisions	309
B. Implication-Based Fuzzy Rules as Randomized Gradual Rules	313
B.1 Implication-based fuzzy rules	314
B.1.1 Gradual rules	315
B.1.2 Other implication-based rules.....	317
B.2 Randomized gradual rules	320
B.3 A probabilistic representation of implication-based fuzzy rules.....	322
C. Similarity-Based Reasoning as Logical Inference	333
D. Simulation Results of Section 3.4.4	335
E. Experimental Results of Section 5.5.4	339
F. Simulation Results of Section 7.4	341
G. Computation of an Extended Splitting Measures	343
H. Experimental Results of Section 7.7.2	345
References	347
Index	369
