## Robot Learning

|                                                                                                                                                               |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| It's Just Semantics: How to Get Robots to Understand the World the Way We Do .....                                                                            | 3  |
| <i>Jen Jen Chung, Julian Förster, Paula Wulkop, Lionel Ott, Nicholas Lawrance, and Roland Siegwart</i>                                                        |    |
| Learning Agile, Vision-Based Drone Flight: From Simulation to Reality .....                                                                                   | 11 |
| <i>Davide Scaramuzza and Elia Kaufmann</i>                                                                                                                    |    |
| Continual SLAM: Beyond Lifelong Simultaneous Localization and Mapping Through Continual Learning .....                                                        | 19 |
| <i>Niclas Vödisch, Daniele Cattaneo, Wolfram Burgard, and Abhinav Valada</i>                                                                                  |    |
| Efficiently Learning Single-Arm Fling Motions to Smooth Garments .....                                                                                        | 36 |
| <i>Lawrence Yunliang Chen, Huang Huang, Ellen Novoseller, Daniel Seita, Jeffrey Ichnowski, Michael Laskey, Richard Cheng, Thomas Kollar, and Ken Goldberg</i> |    |
| Learning Long-Horizon Robot Exploration Strategies for Multi-object Search in Continuous Action Spaces .....                                                  | 52 |
| <i>Fabian Schmalstieg, Daniel Honerkamp, Tim Welschehold, and Abhinav Valada</i>                                                                              |    |
| Visual Foresight with a Local Dynamics Model .....                                                                                                            | 67 |
| <i>Colin Kohler and Robert Platt</i>                                                                                                                          |    |

## Robot Vision

|                                                                                                                   |     |
|-------------------------------------------------------------------------------------------------------------------|-----|
| Monocular Camera and Single-Beam Sonar-Based Underwater Collision-Free Navigation with Domain Randomization ..... | 85  |
| <i>Pengzhi Yang, Haowen Liu, Monika Roznere, and Alberto Quattrini Li</i>                                         |     |
| Nonmyopic Distilled Data Association Belief Space Planning Under Budget Constraints .....                         | 102 |
| <i>Moshe Shienman and Vadim Indelman</i>                                                                          |     |

SCIM: Simultaneous Clustering, Inference, and Mapping for Open-World  
Semantic Scene Understanding ..... 119  
*Hermann Blum, Marcus G. Müller, Abel Gawel, Roland Siegwart,  
and Cesar Cadena*

6N-DoF Pose Tracking for Tensegrity Robots ..... 136  
*Shiyang Lu, William R. Johnson III, Kun Wang, Xiaonan Huang,  
Joran Booth, Rebecca Kramer-Bottiglio, and Kostas Bekris*

Scale-Invariant Fast Functional Registration ..... 153  
*Muchen Sun, Allison Pinosky, Ian Abraham, and Todd Murphey*

Towards Mapping of Underwater Structures by a Team of Autonomous  
Underwater Vehicles ..... 170  
*Marios Xanthidis, Bharat Joshi, Monika Roznere, Weihan Wang,  
Nathaniel Burgdorfer, Alberto Quattrini Li, Philippos Mordohai,  
Srihari Nelakuditi, and Ioannis Rekleitis*

**Grasping and Manipulation**

Contact-Implicit Planning and Control for Non-prehensile Manipulation  
Using State-Triggered Constraints ..... 189  
*Maozhen Wang, Aykut Özgün Önel, Philip Long, and Taşkın Padır*

Mechanical Search on Shelves with Efficient Stacking and Destacking  
of Objects ..... 205  
*Huang Huang, Letian Fu, Michael Danielczuk, Chung Min Kim,  
Zachary Tam, Jeffrey Ichnowski, Anelia Angelova, Brian Ichter,  
and Ken Goldberg*

Multi-object Grasping in the Plane ..... 222  
*Wisdom C. Agboh, Jeffrey Ichnowski, Ken Goldberg,  
and Mehmet R. Dogar*

Parameter Estimation for Deformable Objects in Robotic Manipulation  
Tasks ..... 239  
*David Millard, James A. Preiss, Jernej Barbič, and Gaurav S. Sukhatme*

Place-and-Pick-Based Re-grasping Using Unstable Placement ..... 252  
*Jiaming Hu, Akanimoh Adeleye, and Henrik I. Christensen*

Safe, Occlusion-Aware Manipulation for Online Object Reconstruction  
in Confined Spaces ..... 268  
*Yinglong Miao, Rui Wang, and Kostas Bekris*

## Systems and Design

|                                                                                                                                                                    |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Cooperation of Assistive Robots to Improve Productivity in the Nursing Care Field .....                                                                            | 287 |
| <i>Yasuhisa Hirata, Jose Victorio Salazar Luces, Ankit A. Ravankar, and Seyed Amir Tafrishi</i>                                                                    |     |
| Adaptive Radiation Survey Using an Autonomous Robot Executing LiDAR Scans in the Large Hadron Collider .....                                                       | 295 |
| <i>Hannes Gamper, David Forkel, Alejandro Díaz Rosales, Jorge Playán Garai, Carlos Veiga Almagro, Luca Rosario Buonocore, Eloise Matheson, and Mario Di Castro</i> |     |
| Reference-Free Learning Bipedal Motor Skills via Assistive Force Curricula .....                                                                                   | 304 |
| <i>Fan Shi, Yuta Kojio, Tasuku Makabe, Tomoki Anzai, Kunio Kojima, Kei Okada, and Masayuki Inaba</i>                                                               |     |
| Ball-and-Socket Joint Pose Estimation Using Magnetic Field .....                                                                                                   | 321 |
| <i>Tai Hoang, Alona Kharchenko, Simon Trendel, and Rafael Hostettler</i>                                                                                           |     |
| BulletArm: An Open-Source Robotic Manipulation Benchmark and Learning Framework .....                                                                              | 335 |
| <i>Dian Wang, Colin Kohler, Xupeng Zhu, Mingxi Jia, and Robert Platt</i>                                                                                           |     |
| Optimization-Based Online Flow Fields Estimation for AUVs Navigation .....                                                                                         | 351 |
| <i>Hao Xu, Yupu Lu, and Jia Pan</i>                                                                                                                                |     |
| Flying Hydraulically Amplified Electrostatic Gripper System for Aerial Object Manipulation .....                                                                   | 368 |
| <i>Dario Tscholl, Stephan-Daniel Gravert, Aurel X. Appius, and Robert K. Katzschmann</i>                                                                           |     |

## Control

|                                                                                      |     |
|--------------------------------------------------------------------------------------|-----|
| Hybrid Quadratic Programming - Pullback Bundle Dynamical Systems Control .....       | 387 |
| <i>Bernardo Fichera and Aude Billard</i>                                             |     |
| Riemannian Geometry as a Unifying Theory for Robot Motion Learning and Control ..... | 395 |
| <i>Noémie Jaquier and Tamim Asfour</i>                                               |     |

|                                                                                                                              |     |
|------------------------------------------------------------------------------------------------------------------------------|-----|
| Ensured Continuous Surveillance Despite Sensor Transition Using Control Barrier Functions .....                              | 404 |
| <i>Luis Guerrero-Bonilla, Carlos Nieto-Granda, and Magnus Egerstedt</i>                                                      |     |
| Nonlinear Stochastic Trajectory Optimization for Centroidal Momentum Motion Generation of Legged Robots .....                | 420 |
| <i>Ahmad Gazar, Majid Khadiv, Sébastien Kleff, Andrea Del Prete, and Ludovic Righetti</i>                                    |     |
| Reactive Anticipatory Robot Skills with Memory .....                                                                         | 436 |
| <i>Hakan Girgin, Julius Jankowski, and Sylvain Calinon</i>                                                                   |     |
| ROSE: Robust State Estimation via Online Covariance Adaption .....                                                           | 452 |
| <i>Seyed Fakoorian, Kyohei Otsu, Shehryar Khattak, Matteo Palieri, and Ali-akbar Agha-mohammadi</i>                          |     |
| What Can Algebraic Topology and Differential Geometry Teach Us About Intrinsic Dynamics and Global Behavior of Robots? ..... | 468 |
| <i>Alin Albu-Schäffer and Arne Sachtler</i>                                                                                  |     |
| <br><b>Planning</b>                                                                                                          |     |
| Efficient Task Planning Using Abstract Skills and Dynamic Road Map Matching .....                                            | 487 |
| <i>Khen Elimelech, Lydia E. Kavraki, and Moshe Y. Vardi</i>                                                                  |     |
| CALIPSO: A Differentiable Solver for Trajectory Optimization with Conic and Complementarity Constraints .....                | 504 |
| <i>Taylor A. Howell, Kevin Tracy, Simon Le Cleac'h, and Zachary Manchester</i>                                               |     |
| Clutter-Resilient Autonomous Mobile Robot Navigation with Computationally Efficient Free-Space Features .....                | 522 |
