Chapter 1: Introduction 1

Edgar G. Hertwich, David W. Pennington, Jane C. Bare

Life-Cycle Assessment	1
Approaches to Impact Assessment	4
Top-down and bottom-up approaches	4
Midpoint and endpoint indicators	5
Temporal and spatial differentiation	6
Towards Best Available Practice in LCIA	8
Outline of <i>Life-Cycle Impact Assessment: Striving towards Best Practice</i>	9
References	10

Chapter 2: Impact Assessment of Resources and Land Use 11

Erwin Lindeijer, Ruedi Müller-Wenk, Bengt Steen

Life-Cycle Impact Assessment Framework for Resources and Land Use	12
Aim of this chapter	12
Areas of protection	12
Interventions and their impacts on AoPs	13
Environmental mechanisms of resources and land use	13
Characteristics of impact assessment methods for resources and land use	14
Impact Assessment of Abiotic Resources	15
Starting point	15
Definitions and distinctions	17
Operationalisation of impact assessment of abiotic resources	20
Conclusions	25
Impact Assessment of Biotic Resources	26
Starting point	26
The need for impact assessment of biotic resource extractions	26
Definitions and distinctions	27
Guidelines for impact assessment of biotic extractions	30
Operationalisation	33
Conclusions	39

Impact Assessment of Land Use	39
Starting point	39
Definitions and distinctions	40
The relation between land use and its impacts on AoPs	48
Operationalisation of land-use impact assessment for AoPs	50
Weighting within impact category land use	60
Conclusions	61
References	62

Chapter 3: Climate Change, Stratospheric Ozone Depletion, Photooxidant Formation, Acidification, and Eutrophication 65

José Potting, Walter Klöpffer, Jyri Seppälä, Greg Norris, Mark Goedkoop

Introduction	65
General Issues	66
Best available practice and uncertainties	66
Models and model domains	67
Definition of the category indicator	67
Substances covered	68
Spatial aspects	68
Temporal resolution	69
Interrelations between impact categories	70
Climate Change	71
Description of the impact category	71
Relevant substances	71
State-of-the-art science	72
Category indicator and characterisation factors	73
Spatial aspects	73
Temporal aspects	73
Other aspects	73
Recommendations	74
Stratospheric Ozone Depletion	74
Description of the impact category	74
Relevant substances	75
State-of-the-art science	75
Category indicator and characterisation factors	76
Spatial aspects	76
Temporal aspects	76
Other aspects	76
Recommendations	77
Photooxidant Formation	77
Description of the impact category	77
Relevant substances	78
State-of-the-art science	78
Category indicator and site-generic characterisation factors	79

Spatial aspects and site-dependent characterisation factors	80
Temporal aspects	81
Other aspects	81
Recommendations	81
Acidification	82
Description of the impact category	82
Relevant substances	82
State-of-the-art science	82
Category indicator and site-generic characterisation factors	84
Spatial aspects and site-dependent characterisation factors	84
Temporal aspects	86
Other aspects	87
Recommendations	87
Terrestrial Eutrophication	87
Description of the impact category	87
Relevant substances	88
State-of-the-art science	88
Category indicators and site-generic characterisation factors	88
Spatial aspects and site-dependent characterisation factors	88
Temporal aspects	89
Other aspects	90
Recommendations	90
Aquatic Eutrophication	90
Description of the impact category	90
Relevant substances	91
State-of-the-art science	91
Category indicators and site-generic characterisation factors	91
Spatial aspects and site-dependent characterisation factors	92
Temporal aspects	93
Other aspects	93
Recommendations	94
Overall Recommendations	94
Recommendations on a general level	94
Recommendations by impact category	95
References	97

Chapter 4: Fate and Exposure Assessment in the Life-Cycle

Impact Assessment of Toxic Chemicals..... 101

*Edgar G. Hertwich, Oliver Jolliet, David W. Pennington, Michael Hauschild, Carsten Schulze,
Wolfram Krewitt, Mark Huijbregts*

Introduction	101
Methodological Choices in the Assessment of Toxicity	103
Desired level of sophistication	103
The interface between fate and effect assessment	106

Multimedia Models in LCA	106
Medium-Specific Approaches	109
Application of air quality modelling: The EcoSense Model	110
Application of water quality and aquatic fate modelling	112
Use of the Models in LCIA	112
Evaluation of Fate and Exposure Methods	113
Environmental relevance and comprehensiveness	113
Scientific validity and reliability	114
Transparency and reproducibility	115
Relevance to the decision context	115
Feasibility	116
Recommendations	116
An approach to the location issue	116
Temporal considerations	118
Uncertainty and the standard of evidence	118
Model selection	119
Conclusions	119
References	120

Chapter 5: Indicators for Human Toxicity in Life-Cycle Impact Assessment 123

Wolfram Krewitt, David W. Pennington, Stig I. Olsen, Pierre Crettaz, Olivier Jolliet

Introduction	123
Current Practice in LCIA	125
Toxicological Potency: Dose–Response	127
Noncarcinogens	129
Carcinogens	131
Radiation	132
Severity	133
Qualitative approaches to account for severity	133
Quantitative approaches to account for severity	135
Availability of data to address expected severity	137
Evaluation of Human Toxicity Indicators	139
Scientific validity and reliability	139
Transparency and reproducibility	141
Comprehensiveness and sophistication	142
Relevance to the decision context	143
Feasibility	143
Conclusions and Recommendations	144
References	146

Chapter 6: Indicators for Ecotoxicity in Life-Cycle Impact Assessment 149

Michael Hauschild, David W. Pennington

Introduction	149
Laboratory Test Data for Toxicity to Key Species	152
Predicted No-Effect Concentration	152
Measuring PNEC in field meso- and microcosm tests	153
Estimating PNEC on the basis of laboratory tests performed on individual species	153
Evaluation and comparison of PNEC estimation methods	157
Estimation of PNEC for terrestrial ecosystems and sediments	158
Marginal Measures, Mixtures, and Endpoint Relevance	159
Existing marginal ecosystem effect measures	160
Potentially affected fraction of species in mixtures: Combi-PAF	162
Ecosystem endpoint measure relevance: PDFs and PAFs	164
Criteria to Evaluate Ecotoxicity Indicators	166
Pre-selection of feasible indicators	166
Conclusions	169
References	171
Annex: Data Sources	174
Key sources of measured data	174
Data prediction: QSARs	174

Chapter 7: Normalisation, Grouping, and Weighting in Life-Cycle Impact Assessment 177

Göran Finnveden, Patrick Hofstetter, Jane C. Bare, Lauren Basson, Andreas Ciroth, Thomas Mettier, Jyri Seppälä, Jessica Johansson, Greg Norris, Stephan Volkwein

Introduction	178
On the Overall Structure and Methodology for Life-Cycle Impact Assessment	179
Normalisation	181
External normalisation	181
Case-specific normalisation	183
Comparison between external and case-specific normalisation	183
When is normalisation needed?	184
Grouping	184
Overview of Weighting Methods	185
Proxy weighting methods	185
Technology abatement weighting methods	185
Monetization weighting methods	186
Panel weighting methods	188
Distance-to-target weighting methods	191
Other classifications	192

Criteria for the Evaluation of Weighting Methods	192
Input-related criteria	193
Procedure-related criteria	193
Output-related criteria	195
Evaluation of Methods	195
Evaluation	196
Concluding remarks	201
Conclusions	202
References	204

Chapter 8: The Conceptual Structure of Life-Cycle Impact Assessment 209

Helias A. Udo de Haes, Erwin Lindeijer

Introduction	209
LCIA Terminology	210
Environment	210
Environmental mechanism	210
Environmental intervention	211
Midpoint and endpoint	211
Environmental relevance	212
Areas of protection	212
Viewpoints and Approaches in LCIA	213
Decision support versus systems analysis	213
The scope of LCIA	214
Midpoint versus endpoint approaches	215
Classification of AoPs in LCIA	216
Classification of AoPs according to physical characteristics	217
Classification of AoPs according to societal values	217
Exploration of manmade environment in relation to system boundary	218
Splitting up the AoP natural environment	219
Comparison of two types of classification of AoPs	220
Overview of the AoPs	220
Visual representation of the classification of AoPs according to physical characteristics	221
Visual representation of the classification of AoPs according to societal values	222
Conclusions	222
References	225
