Introduction	5
I	9
1 Preliminaries	11
1.1 Selected facts of set theory	11
1.2 Selected facts of topology	23
1.3 Selected facts of measure theory	34
2 Nonmeasurable sets	39
2.1 Vitali set	39
2.2 Bernstein set	40
2.3 Other examples of nonmeasurable sets	42
II	45
3 Kuratowski partitions	47
3.1 Kuratowski's problem and known solutions	47
3.2 Selected results for Baire spaces	53
3.3 Baire spaces in game theory	59
4 On Kuratowski partitions in tree structures	61
5 On Kuratowski partitions in Ellentuck topology	67
6 Ideals associated with Kuratowski partitions	71

7	Kuratowski partitions in Baire spaces	77
8	Kuratowski partitions and game theory	81
9	Kuratowski partitions in complete metric spaces	85
10	An example of a metric space without Kuratowski partitions	89
III		93
11	The generalization of Louveau-Simpson Theorem	95
12	On the equivalences of Gitik-Shelah Theorem	99
13	The generalization of Halpern-Läuchli Theorem	107
IV		119
14	Partitions and point-finite covers in Baire spaces	121
15	Nonmeasurable unions for point-finite families	127
16	On the existence of measurable selectors	135
	Bibliography	141
	Index	150
